RE: AB 52 Consultation, Soil Vapor Extraction (SVE) System Update Project, Burbank, Los Angeles County, California

Dear Mr. BobbyRay Esparza

Please let this letter serve as a notification that the City of Burbank, as the lead agency is initiating consultation in compliance with Assembly Bill (AB) 52 for the proposed Soil Vapor Extraction System Upgrade Project (Project). Please consider this letter and preliminary Project information as the initiation of the California Environmental Quality Act procedures, specifically Public Resources Code (PRC) Section 21080.3.1 and Chapter 532 Statutes of 2014 (i.e., AB 52).

Under AB 52, the Cahuilla Band of Mission Indians has 30 days upon receipt of this letter to request consultation regarding the Soil Vapor Extraction System Upgrade Project. Please respond within the above timeframe, pursuant to PRC Section 21080.3.1(d) if you would like to consult on this Project.

Project Location

The Proposed Project constitutes a continuation of past remediation efforts at a portion of the former Lockheed Martin ("LM" or "Applicant") Plant B-1 site. Proposed remediation efforts would generally be located at 1234 North Victory Place, 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place (Project Site) in the City of Burbank. As shown in **Figure 1: Regional Vicinity Map**, the Proposed Project is located in the central portion of City. The Project Site consists of two main areas: 1) the property at 1234 North Victory Place, which is northwest of the intersection at North Victory Place and railroad tracks owned by the Los Angeles County Metropolitan Transportation Authority (Metro) and Amtrak (Assessor Parel Number [APN] 2462-017-020) (SVE treatment plant property); and 2) the portion of the Project Site generally located at 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place within the parking lots of the northeastern portion of the Burbank Empire Center (APN 2462-017-18, -29, -030, -032) (SVE well field). The entire Project Site is shown in **Figure 2: Local Vicinity Map.**

Project Description

The Project would consist of four primary elements: 1) dismantling and removal of the existing legacy SVE treatment plant and associated structures; 2) installation of a new SVE treatment system at the north corner of the SVE treatment plant property; 3) installation of 27 additional SVE wells beneath the Burbank Empire Center parking lots within the SVE well field; and 4) installation of an underground piping network to connect the new wells to the proposed SVE treatment system. See **Figure 3: Proposed SVE Treatment System** and

Figure 4: Proposed SVE Wells and Piping for Project components. The proposed components would all be designed and constructed in accordance with the Source Area Removal Plan (SARP).

The owner of the Project Site is considering redevelopment of the SVE treatment plant property (APN 2462-017-020) to include a compatible commercial use to be constructed adjacent to the proposed SVE treatment system. Several potential commercial uses have been presented to the City, but the final option has not been selected as of the commencement of CEQA analysis for this Project (August 2024). The entitlement of any proposed commercial use will undergo its own process with the City, is not part of this Project, and the construction and operation of any commercial use is, therefore, not evaluated in this Supplemental EIR. However, this constitutes a reasonably foreseeable cumulative project and is analyzed in the cumulative impacts analysis for each environmental topic of this Supplemental EIR.

The entire Project Site is designated as Regional Commercial by the City's General Plan, which provides for regional employment and shopping destinations that play an important role in the City's economy by residents of the City and surrounding cities.

The SVE treatment plant property is zoned as M-2 General Industrial, which is intended for the development of manufacturing process, fabrication and assembly of goods and materials; and the SVE well field, which comprises a portion of the Burbank Empire Center, is zoned as PD 97-3 (Planned Development), which permits any use, provided that that use is specifically listed as a permitted use in the approved Development Agreement for the Planned Development

Project Construction

Project construction is anticipated to be conducted from spring of 2025 to late spring of 2026 (assumed to be up to 15 months). Project construction activities would consist of demolition of the existing legacy SVE treatment plant, Project Site grading, installation of new electrical infrastructure, and construction of the proposed SVE treatment system and associated wells and piping. Demolition activities would generate approximately 350 tons of asphalt; 2,295 tons of concrete; 100 tons of pipelines (metal scrape); and 5 tons of carbon. Demolition debris would be transported off-site for proper disposal. For the purposes of the environmental analysis, it is assumed that construction of the proposed SVE Phase I cryogenic cooling/condensation (C3) system would not overlap with construction of the proposed SVE wells and piping. Demolition of the existing legacy SVE treatment plant would occur first, followed sequentially by the construction of the proposed SVE Phase I C3 system, installation of the proposed SVE wells and piping, and installation of the SVE Phase II carbon system. The duration of demolition of the existing legacy SVE treatment plant would occur over approximately 3 months, construction for the proposed SVE Phase I C3 system would occur over approximately 6 months, and construction of the proposed SVE wells and piping would occur over approximately 6 months. Construction for the SVE Phase II carbon system is to be determined and would occur after SVE Phase I C3 System operations have been completed. On-site construction activities would include a workforce of approximately six individuals. Construction would occur consistent with City noise policies, as presented in Burbank Municipal Code (BMC) Section 9-1-1-105.10. Specifically, construction of the Proposed Project would occur Monday through Friday from 7:00 a.m. to 7:00 p.m. and Saturday from 8:00 a.m. to 5:00 p.m. During construction of the proposed SVE treatment system, short-term, temporary closures of the lanes adjacent to North Victory Place and Empire Avenue may be required for construction staging.

To ensure compliance with AB 52, the City respectfully requests that you assist us by providing any relevant information you may have regarding tribal cultural resources within the Project area boundaries. Your comments and concerns are important to the City's planning process. If you have any questions or concerns with the Project, please contact:

Joseph Onyebuchi, Associate Planner
City of Burbank, Community Development Department, Planning Division

RE: AB 52 Consultation, Soil Vapor Extraction (SVE) System Update Project, Burbank, Los Angeles County, California

Dear Chairperson Erica Schenk,

Please let this letter serve as a notification that the City of Burbank, as the lead agency is initiating consultation in compliance with Assembly Bill (AB) 52 for the proposed Soil Vapor Extraction System Upgrade Project (Project). Please consider this letter and preliminary Project information as the initiation of the California Environmental Quality Act procedures, specifically Public Resources Code (PRC) Section 21080.3.1 and Chapter 532 Statutes of 2014 (i.e., AB 52).

Under AB 52, the Cahuilla Band of Mission Indians has 30 days upon receipt of this letter to request consultation regarding the Soil Vapor Extraction System Upgrade Project. Please respond within the above timeframe, pursuant to PRC Section 21080.3.1(d) if you would like to consult on this Project.

Project Location

The Proposed Project constitutes a continuation of past remediation efforts at a portion of the former Lockheed Martin ("LM" or "Applicant") Plant B-1 site. Proposed remediation efforts would generally be located at 1234 North Victory Place, 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place (Project Site) in the City of Burbank. As shown in **Figure 1: Regional Vicinity Map**, the Proposed Project is located in the central portion of City. The Project Site consists of two main areas: 1) the property at 1234 North Victory Place, which is northwest of the intersection at North Victory Place and railroad tracks owned by the Los Angeles County Metropolitan Transportation Authority (Metro) and Amtrak (Assessor Parel Number [APN] 2462-017-020) (SVE treatment plant property); and 2) the portion of the Project Site generally located at 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place within the parking lots of the northeastern portion of the Burbank Empire Center (APN 2462-017-18, -29, -030, -032) (SVE well field). The entire Project Site is shown in **Figure 2: Local Vicinity Map.**

Project Description

The Project would consist of four primary elements: 1) dismantling and removal of the existing legacy SVE treatment plant and associated structures; 2) installation of a new SVE treatment system at the north corner of the SVE treatment plant property; 3) installation of 27 additional SVE wells beneath the Burbank Empire Center parking lots within the SVE well field; and 4) installation of an underground piping network to connect the new wells to the proposed SVE treatment system. See **Figure 3: Proposed SVE Treatment System** and

Figure 4: Proposed SVE Wells and Piping for Project components. The proposed components would all be designed and constructed in accordance with the Source Area Removal Plan (SARP).

The owner of the Project Site is considering redevelopment of the SVE treatment plant property (APN 2462-017-020) to include a compatible commercial use to be constructed adjacent to the proposed SVE treatment system. Several potential commercial uses have been presented to the City, but the final option has not been selected as of the commencement of CEQA analysis for this Project (August 2024). The entitlement of any proposed commercial use will undergo its own process with the City, is not part of this Project, and the construction and operation of any commercial use is, therefore, not evaluated in this Supplemental EIR. However, this constitutes a reasonably foreseeable cumulative project and is analyzed in the cumulative impacts analysis for each environmental topic of this Supplemental EIR.

The entire Project Site is designated as Regional Commercial by the City's General Plan, which provides for regional employment and shopping destinations that play an important role in the City's economy by residents of the City and surrounding cities.

The SVE treatment plant property is zoned as M-2 General Industrial, which is intended for the development of manufacturing process, fabrication and assembly of goods and materials; and the SVE well field, which comprises a portion of the Burbank Empire Center, is zoned as PD 97-3 (Planned Development), which permits any use, provided that that use is specifically listed as a permitted use in the approved Development Agreement for the Planned Development

Project Construction

Project construction is anticipated to be conducted from spring of 2025 to late spring of 2026 (assumed to be up to 15 months). Project construction activities would consist of demolition of the existing legacy SVE treatment plant, Project Site grading, installation of new electrical infrastructure, and construction of the proposed SVE treatment system and associated wells and piping. Demolition activities would generate approximately 350 tons of asphalt; 2,295 tons of concrete; 100 tons of pipelines (metal scrape); and 5 tons of carbon. Demolition debris would be transported off-site for proper disposal. For the purposes of the environmental analysis, it is assumed that construction of the proposed SVE Phase I cryogenic cooling/condensation (C3) system would not overlap with construction of the proposed SVE wells and piping. Demolition of the existing legacy SVE treatment plant would occur first, followed sequentially by the construction of the proposed SVE Phase I C3 system, installation of the proposed SVE wells and piping, and installation of the SVE Phase II carbon system. The duration of demolition of the existing legacy SVE treatment plant would occur over approximately 3 months, construction for the proposed SVE Phase I C3 system would occur over approximately 6 months, and construction of the proposed SVE wells and piping would occur over approximately 6 months. Construction for the SVE Phase II carbon system is to be determined and would occur after SVE Phase I C3 System operations have been completed. On-site construction activities would include a workforce of approximately six individuals. Construction would occur consistent with City noise policies, as presented in Burbank Municipal Code (BMC) Section 9-1-1-105.10. Specifically, construction of the Proposed Project would occur Monday through Friday from 7:00 a.m. to 7:00 p.m. and Saturday from 8:00 a.m. to 5:00 p.m. During construction of the proposed SVE treatment system, short-term, temporary closures of the lanes adjacent to North Victory Place and Empire Avenue may be required for construction staging.

To ensure compliance with AB 52, the City respectfully requests that you assist us by providing any relevant information you may have regarding tribal cultural resources within the Project area boundaries. RE: AB 52 Consultation, Soil Vapor Extraction (SVE) System Update Project, Burbank, Los Angeles County, California

Dear Ms. Sarah Brunzell,

Please let this letter serve as a notification that the City of Burbank, as the lead agency is initiating consultation in compliance with Assembly Bill (AB) 52 for the proposed Soil Vapor Extraction System Upgrade Project (Project). Please consider this letter and preliminary Project information as the initiation of the California Environmental Quality Act procedures, specifically Public Resources Code (PRC) Section 21080.3.1 and Chapter 532 Statutes of 2014 (i.e., AB 52).

Under AB 52, the Fernandeño Tataviam Band of Mission Indians has 30 days upon receipt of this letter to request consultation regarding the Soil Vapor Extraction System Upgrade Project. Please respond within the above timeframe, pursuant to PRC Section 21080.3.1(d) if you would like to consult on this Project.

Project Location

The Proposed Project constitutes a continuation of past remediation efforts at a portion of the former Lockheed Martin ("LM" or "Applicant") Plant B-1 site. Proposed remediation efforts would generally be located at 1234 North Victory Place, 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place (Project Site) in the City of Burbank. As shown in **Figure 1: Regional Vicinity Map**, the Proposed Project is located in the central portion of City. The Project Site consists of two main areas: 1) the property at 1234 North Victory Place, which is northwest of the intersection at North Victory Place and railroad tracks owned by the Los Angeles County Metropolitan Transportation Authority (Metro) and Amtrak (Assessor Parel Number [APN] 2462-017-020) (SVE treatment plant property); and 2) the portion of the Project Site generally located at 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place within the parking lots of the northeastern portion of the Burbank Empire Center (APN 2462-017-18, -29, -030, -032) (SVE well field). The entire Project Site is shown in **Figure 2: Local Vicinity Map.**

Project Description

The Project would consist of four primary elements: 1) dismantling and removal of the existing legacy SVE treatment plant and associated structures; 2) installation of a new SVE treatment system at the north corner of the SVE treatment plant property; 3) installation of 27 additional SVE wells beneath the Burbank Empire Center parking lots within the SVE well field; and 4) installation of an underground piping network to connect the new wells to the proposed SVE treatment system. See **Figure 3: Proposed SVE Treatment System** and

Figure 4: Proposed SVE Wells and Piping for Project components. The proposed components would all be designed and constructed in accordance with the Source Area Removal Plan (SARP).

The owner of the Project Site is considering redevelopment of the SVE treatment plant property (APN 2462-017-020) to include a compatible commercial use to be constructed adjacent to the proposed SVE treatment system. Several potential commercial uses have been presented to the City, but the final option has not been selected as of the commencement of CEQA analysis for this Project (August 2024). The entitlement of any proposed commercial use will undergo its own process with the City, is not part of this Project, and the construction and operation of any commercial use is, therefore, not evaluated in this Supplemental EIR. However, this constitutes a reasonably foreseeable cumulative project and is analyzed in the cumulative impacts analysis for each environmental topic of this Supplemental EIR.

The entire Project Site is designated as Regional Commercial by the City's General Plan, which provides for regional employment and shopping destinations that play an important role in the City's economy by residents of the City and surrounding cities.

The SVE treatment plant property is zoned as M-2 General Industrial, which is intended for the development of manufacturing process, fabrication and assembly of goods and materials; and the SVE well field, which comprises a portion of the Burbank Empire Center, is zoned as PD 97-3 (Planned Development), which permits any use, provided that that use is specifically listed as a permitted use in the approved Development Agreement for the Planned Development

Project Construction

Project construction is anticipated to be conducted from spring of 2025 to late spring of 2026 (assumed to be up to 15 months). Project construction activities would consist of demolition of the existing legacy SVE treatment plant, Project Site grading, installation of new electrical infrastructure, and construction of the proposed SVE treatment system and associated wells and piping. Demolition activities would generate approximately 350 tons of asphalt; 2,295 tons of concrete; 100 tons of pipelines (metal scrape); and 5 tons of carbon. Demolition debris would be transported off-site for proper disposal. For the purposes of the environmental analysis, it is assumed that construction of the proposed SVE Phase I cryogenic cooling/condensation (C3) system would not overlap with construction of the proposed SVE wells and piping. Demolition of the existing legacy SVE treatment plant would occur first, followed sequentially by the construction of the proposed SVE Phase I C3 system, installation of the proposed SVE wells and piping, and installation of the SVE Phase II carbon system. The duration of demolition of the existing legacy SVE treatment plant would occur over approximately 3 months, construction for the proposed SVE Phase I C3 system would occur over approximately 6 months, and construction of the proposed SVE wells and piping would occur over approximately 6 months. Construction for the SVE Phase II carbon system is to be determined and would occur after SVE Phase I C3 System operations have been completed. On-site construction activities would include a workforce of approximately six individuals. Construction would occur consistent with City noise policies, as presented in Burbank Municipal Code (BMC) Section 9-1-1-105.10. Specifically, construction of the Proposed Project would occur Monday through Friday from 7:00 a.m. to 7:00 p.m. and Saturday from 8:00 a.m. to 5:00 p.m. During construction of the proposed SVE treatment system, short-term, temporary closures of the lanes adjacent to North Victory Place and Empire Avenue may be required for construction staging.

To ensure compliance with AB 52, the City respectfully requests that you assist us by providing any relevant information you may have regarding tribal cultural resources within the Project area boundaries. Your comments and concerns are important to the City's planning process. If you have any questions or concerns with the Project, please contact:

Joseph Onyebuchi, Associate Planner

RE: AB 52 Consultation, Soil Vapor Extraction (SVE) System Update Project, Burbank, Los Angeles County, California

Dear Chairperson Anthony Morales,

Please let this letter serve as a notification that the City of Burbank, as the lead agency is initiating consultation in compliance with Assembly Bill (AB) 52 for the proposed Soil Vapor Extraction System Upgrade Project (Project). Please consider this letter and preliminary Project information as the initiation of the California Environmental Quality Act procedures, specifically Public Resources Code (PRC) Section 21080.3.1 and Chapter 532 Statutes of 2014 (i.e., AB 52).

Under AB 52, the Gabrieleño/Tongva San Gabriel Band of Mission Indians has 30 days upon receipt of this letter to request consultation regarding the Soil Vapor Extraction System Upgrade Project. Please respond within the above timeframe, pursuant to PRC Section 21080.3.1(d) if you would like to consult on this Project.

Project Location

The Proposed Project constitutes a continuation of past remediation efforts at a portion of the former Lockheed Martin ("LM" or "Applicant") Plant B-1 site. Proposed remediation efforts would generally be located at 1234 North Victory Place, 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place (Project Site) in the City of Burbank. As shown in **Figure 1: Regional Vicinity Map**, the Proposed Project is located in the central portion of City. The Project Site consists of two main areas: 1) the property at 1234 North Victory Place, which is northwest of the intersection at North Victory Place and railroad tracks owned by the Los Angeles County Metropolitan Transportation Authority (Metro) and Amtrak (Assessor Parel Number [APN] 2462-017-020) (SVE treatment plant property); and 2) the portion of the Project Site generally located at 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place within the parking lots of the northeastern portion of the Burbank Empire Center (APN 2462-017-18, -29, -030, -032) (SVE well field). The entire Project Site is shown in **Figure 2: Local Vicinity Map.**

Project Description

The Project would consist of four primary elements: 1) dismantling and removal of the existing legacy SVE treatment plant and associated structures; 2) installation of a new SVE treatment system at the north corner of the SVE treatment plant property; 3) installation of 27 additional SVE wells beneath the Burbank Empire Center parking lots within the SVE well field; and 4) installation of an underground piping network to connect the new wells to the proposed SVE treatment system. See **Figure 3: Proposed SVE Treatment System** and **Figure 4: Proposed SVE Wells and Piping** for Project components. The proposed components would all be

designed and constructed in accordance with the Source Area Removal Plan (SARP).

The owner of the Project Site is considering redevelopment of the SVE treatment plant property (APN 2462-017-020) to include a compatible commercial use to be constructed adjacent to the proposed SVE treatment system. Several potential commercial uses have been presented to the City, but the final option has not been selected as of the commencement of CEQA analysis for this Project (August 2024). The entitlement of any proposed commercial use will undergo its own process with the City, is not part of this Project, and the construction and operation of any commercial use is, therefore, not evaluated in this Supplemental EIR. However, this constitutes a reasonably foreseeable cumulative project and is analyzed in the cumulative impacts analysis for each environmental topic of this Supplemental EIR.

The entire Project Site is designated as Regional Commercial by the City's General Plan, which provides for regional employment and shopping destinations that play an important role in the City's economy by residents of the City and surrounding cities.

The SVE treatment plant property is zoned as M-2 General Industrial, which is intended for the development of manufacturing process, fabrication and assembly of goods and materials; and the SVE well field, which comprises a portion of the Burbank Empire Center, is zoned as PD 97-3 (Planned Development), which permits any use, provided that that use is specifically listed as a permitted use in the approved Development Agreement for the Planned Development

Project Construction

Project construction is anticipated to be conducted from spring of 2025 to late spring of 2026 (assumed to be up to 15 months). Project construction activities would consist of demolition of the existing legacy SVE treatment plant, Project Site grading, installation of new electrical infrastructure, and construction of the proposed SVE treatment system and associated wells and piping. Demolition activities would generate approximately 350 tons of asphalt; 2,295 tons of concrete; 100 tons of pipelines (metal scrape); and 5 tons of carbon. Demolition debris would be transported off-site for proper disposal. For the purposes of the environmental analysis, it is assumed that construction of the proposed SVE Phase I cryogenic cooling/condensation (C3) system would not overlap with construction of the proposed SVE wells and piping. Demolition of the existing legacy SVE treatment plant would occur first, followed sequentially by the construction of the proposed SVE Phase I C3 system, installation of the proposed SVE wells and piping, and installation of the SVE Phase II carbon system. The duration of demolition of the existing legacy SVE treatment plant would occur over approximately 3 months, construction for the proposed SVE Phase I C3 system would occur over approximately 6 months, and construction of the proposed SVE wells and piping would occur over approximately 6 months. Construction for the SVE Phase II carbon system is to be determined and would occur after SVE Phase I C3 System operations have been completed. On-site construction activities would include a workforce of approximately six individuals. Construction would occur consistent with City noise policies, as presented in Burbank Municipal Code (BMC) Section 9-1-1-105.10. Specifically, construction of the Proposed Project would occur Monday through Friday from 7:00 a.m. to 7:00 p.m. and Saturday from 8:00 a.m. to 5:00 p.m. During construction of the proposed SVE treatment system, short-term, temporary closures of the lanes adjacent to North Victory Place and Empire Avenue may be required for construction staging.

To ensure compliance with AB 52, the City respectfully requests that you assist us by providing any relevant information you may have regarding tribal cultural resources within the Project area boundaries. Your comments and concerns are important to the City's planning process. If you have any questions or concerns with the Project, please contact:

RE: AB 52 Consultation, Soil Vapor Extraction (SVE) System Update Project, Burbank, Los Angeles County, California

Dear Chairperson Sandonne Goad,

Please let this letter serve as a notification that the City of Burbank, as the lead agency is initiating consultation in compliance with Assembly Bill (AB) 52 for the proposed Soil Vapor Extraction System Upgrade Project (Project). Please consider this letter and preliminary Project information as the initiation of the California Environmental Quality Act procedures, specifically Public Resources Code (PRC) Section 21080.3.1 and Chapter 532 Statutes of 2014 (i.e., AB 52).

Under AB 52, the Gabrieliño/Tongva Nation has 30 days upon receipt of this letter to request consultation regarding the Soil Vapor Extraction System Upgrade Project. Please respond within the above timeframe, pursuant to PRC Section 21080.3.1(d) if you would like to consult on this Project.

Project Location

The Proposed Project constitutes a continuation of past remediation efforts at a portion of the former Lockheed Martin ("LM" or "Applicant") Plant B-1 site. Proposed remediation efforts would generally be located at 1234 North Victory Place, 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place (Project Site) in the City of Burbank. As shown in **Figure 1: Regional Vicinity Map**, the Proposed Project is located in the central portion of City. The Project Site consists of two main areas: 1) the property at 1234 North Victory Place, which is northwest of the intersection at North Victory Place and railroad tracks owned by the Los Angeles County Metropolitan Transportation Authority (Metro) and Amtrak (Assessor Parel Number [APN] 2462-017-020) (SVE treatment plant property); and 2) the portion of the Project Site generally located at 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place within the parking lots of the northeastern portion of the Burbank Empire Center (APN 2462-017-18, -29, -030, -032) (SVE well field). The entire Project Site is shown in **Figure 2: Local Vicinity Map.**

Project Description

The Project would consist of four primary elements: 1) dismantling and removal of the existing legacy SVE treatment plant and associated structures; 2) installation of a new SVE treatment system at the north corner of the SVE treatment plant property; 3) installation of 27 additional SVE wells beneath the Burbank Empire Center parking lots within the SVE well field; and 4) installation of an underground piping network to connect the new wells to the proposed SVE treatment system. See **Figure 3: Proposed SVE Treatment System** and

Figure 4: Proposed SVE Wells and Piping for Project components. The proposed components would all be designed and constructed in accordance with the Source Area Removal Plan (SARP).

The owner of the Project Site is considering redevelopment of the SVE treatment plant property (APN 2462-017-020) to include a compatible commercial use to be constructed adjacent to the proposed SVE treatment system. Several potential commercial uses have been presented to the City, but the final option has not been selected as of the commencement of CEQA analysis for this Project (August 2024). The entitlement of any proposed commercial use will undergo its own process with the City, is not part of this Project, and the construction and operation of any commercial use is, therefore, not evaluated in this Supplemental EIR. However, this constitutes a reasonably foreseeable cumulative project and is analyzed in the cumulative impacts analysis for each environmental topic of this Supplemental EIR.

The entire Project Site is designated as Regional Commercial by the City's General Plan, which provides for regional employment and shopping destinations that play an important role in the City's economy by residents of the City and surrounding cities.

The SVE treatment plant property is zoned as M-2 General Industrial, which is intended for the development of manufacturing process, fabrication and assembly of goods and materials; and the SVE well field, which comprises a portion of the Burbank Empire Center, is zoned as PD 97-3 (Planned Development), which permits any use, provided that that use is specifically listed as a permitted use in the approved Development Agreement for the Planned Development

Project Construction

Project construction is anticipated to be conducted from spring of 2025 to late spring of 2026 (assumed to be up to 15 months). Project construction activities would consist of demolition of the existing legacy SVE treatment plant, Project Site grading, installation of new electrical infrastructure, and construction of the proposed SVE treatment system and associated wells and piping. Demolition activities would generate approximately 350 tons of asphalt; 2,295 tons of concrete; 100 tons of pipelines (metal scrape); and 5 tons of carbon. Demolition debris would be transported off-site for proper disposal. For the purposes of the environmental analysis, it is assumed that construction of the proposed SVE Phase I cryogenic cooling/condensation (C3) system would not overlap with construction of the proposed SVE wells and piping. Demolition of the existing legacy SVE treatment plant would occur first, followed sequentially by the construction of the proposed SVE Phase I C3 system, installation of the proposed SVE wells and piping, and installation of the SVE Phase II carbon system. The duration of demolition of the existing legacy SVE treatment plant would occur over approximately 3 months, construction for the proposed SVE Phase I C3 system would occur over approximately 6 months, and construction of the proposed SVE wells and piping would occur over approximately 6 months. Construction for the SVE Phase II carbon system is to be determined and would occur after SVE Phase I C3 System operations have been completed. On-site construction activities would include a workforce of approximately six individuals. Construction would occur consistent with City noise policies, as presented in Burbank Municipal Code (BMC) Section 9-1-1-105.10. Specifically, construction of the Proposed Project would occur Monday through Friday from 7:00 a.m. to 7:00 p.m. and Saturday from 8:00 a.m. to 5:00 p.m. During construction of the proposed SVE treatment system, short-term, temporary closures of the lanes adjacent to North Victory Place and Empire Avenue may be required for construction staging.

To ensure compliance with AB 52, the City respectfully requests that you assist us by providing any relevant information you may have regarding tribal cultural resources within the Project area boundaries. Your comments and concerns are important to the City's planning process. If you have any questions or concerns with the Project, please contact:

RE: AB 52 Consultation, Soil Vapor Extraction (SVE) System Update Project, Burbank, Los Angeles County, California

Dear Tribal Chairperson Steven Estrada,

Please let this letter serve as a notification that the City of Burbank, as the lead agency is initiating consultation in compliance with Assembly Bill (AB) 52 for the proposed Soil Vapor Extraction System Upgrade Project (Project). Please consider this letter and preliminary Project information as the initiation of the California Environmental Quality Act procedures, specifically Public Resources Code (PRC) Section 21080.3.1 and Chapter 532 Statutes of 2014 (i.e., AB 52).

Under AB 52, the Santa Rosa Band of Cahuilla Indians has 30 days upon receipt of this letter to request consultation regarding the Soil Vapor Extraction System Upgrade Project. Please respond within the above timeframe, pursuant to PRC Section 21080.3.1(d) if you would like to consult on this Project.

Project Location

The Proposed Project constitutes a continuation of past remediation efforts at a portion of the former Lockheed Martin ("LM" or "Applicant") Plant B-1 site. Proposed remediation efforts would generally be located at 1234 North Victory Place, 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place (Project Site) in the City of Burbank. As shown in **Figure 1: Regional Vicinity Map**, the Proposed Project is located in the central portion of City. The Project Site consists of two main areas: 1) the property at 1234 North Victory Place, which is northwest of the intersection at North Victory Place and railroad tracks owned by the Los Angeles County Metropolitan Transportation Authority (Metro) and Amtrak (Assessor Parel Number [APN] 2462-017-020) (SVE treatment plant property); and 2) the portion of the Project Site generally located at 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place within the parking lots of the northeastern portion of the Burbank Empire Center (APN 2462-017-18, -29, -030, -032) (SVE well field). The entire Project Site is shown in **Figure 2: Local Vicinity Map.**

Project Description

The Project would consist of four primary elements: 1) dismantling and removal of the existing legacy SVE treatment plant and associated structures; 2) installation of a new SVE treatment system at the north corner of the SVE treatment plant property; 3) installation of 27 additional SVE wells beneath the Burbank Empire Center parking lots within the SVE well field; and 4) installation of an underground piping network to connect the new wells to the proposed SVE treatment system. See **Figure 3: Proposed SVE Treatment System** and

Figure 4: Proposed SVE Wells and Piping for Project components. The proposed components would all be designed and constructed in accordance with the Source Area Removal Plan (SARP).

The owner of the Project Site is considering redevelopment of the SVE treatment plant property (APN 2462-017-020) to include a compatible commercial use to be constructed adjacent to the proposed SVE treatment system. Several potential commercial uses have been presented to the City, but the final option has not been selected as of the commencement of CEQA analysis for this Project (August 2024). The entitlement of any proposed commercial use will undergo its own process with the City, is not part of this Project, and the construction and operation of any commercial use is, therefore, not evaluated in this Supplemental EIR. However, this constitutes a reasonably foreseeable cumulative project and is analyzed in the cumulative impacts analysis for each environmental topic of this Supplemental EIR.

The entire Project Site is designated as Regional Commercial by the City's General Plan, which provides for regional employment and shopping destinations that play an important role in the City's economy by residents of the City and surrounding cities.

The SVE treatment plant property is zoned as M-2 General Industrial, which is intended for the development of manufacturing process, fabrication and assembly of goods and materials; and the SVE well field, which comprises a portion of the Burbank Empire Center, is zoned as PD 97-3 (Planned Development), which permits any use, provided that that use is specifically listed as a permitted use in the approved Development Agreement for the Planned Development

Project Construction

Project construction is anticipated to be conducted from spring of 2025 to late spring of 2026 (assumed to be up to 15 months). Project construction activities would consist of demolition of the existing legacy SVE treatment plant, Project Site grading, installation of new electrical infrastructure, and construction of the proposed SVE treatment system and associated wells and piping. Demolition activities would generate approximately 350 tons of asphalt; 2,295 tons of concrete; 100 tons of pipelines (metal scrape); and 5 tons of carbon. Demolition debris would be transported off-site for proper disposal. For the purposes of the environmental analysis, it is assumed that construction of the proposed SVE Phase I cryogenic cooling/condensation (C3) system would not overlap with construction of the proposed SVE wells and piping. Demolition of the existing legacy SVE treatment plant would occur first, followed sequentially by the construction of the proposed SVE Phase I C3 system, installation of the proposed SVE wells and piping, and installation of the SVE Phase II carbon system. The duration of demolition of the existing legacy SVE treatment plant would occur over approximately 3 months, construction for the proposed SVE Phase I C3 system would occur over approximately 6 months, and construction of the proposed SVE wells and piping would occur over approximately 6 months. Construction for the SVE Phase II carbon system is to be determined and would occur after SVE Phase I C3 System operations have been completed. On-site construction activities would include a workforce of approximately six individuals. Construction would occur consistent with City noise policies, as presented in Burbank Municipal Code (BMC) Section 9-1-1-105.10. Specifically, construction of the Proposed Project would occur Monday through Friday from 7:00 a.m. to 7:00 p.m. and Saturday from 8:00 a.m. to 5:00 p.m. During construction of the proposed SVE treatment system, short-term, temporary closures of the lanes adjacent to North Victory Place and Empire Avenue may be required for construction staging.

To ensure compliance with AB 52, the City respectfully requests that you assist us by providing any relevant information you may have regarding tribal cultural resources within the Project area boundaries. Your comments and concerns are important to the City's planning process. If you have any questions or concerns with the Project, please contact:

Joseph Onyebuchi, Associate Planner

RE: AB 52 Consultation, Soil Vapor Extraction (SVE) System Update Project, Burbank, Los Angeles County, California

Dear Mr. Joseph Ontiveros,

Please let this letter serve as a notification that the City of Burbank, as the lead agency is initiating consultation in compliance with Assembly Bill (AB) 52 for the proposed Soil Vapor Extraction System Upgrade Project (Project). Please consider this letter and preliminary Project information as the initiation of the California Environmental Quality Act procedures, specifically Public Resources Code (PRC) Section 21080.3.1 and Chapter 532 Statutes of 2014 (i.e., AB 52).

Under AB 52, the Soboba Band of Luiseño Indians has 30 days upon receipt of this letter to request consultation regarding the Soil Vapor Extraction System Upgrade Project. Please respond within the above timeframe, pursuant to PRC Section 21080.3.1(d) if you would like to consult on this Project.

Project Location

The Proposed Project constitutes a continuation of past remediation efforts at a portion of the former Lockheed Martin ("LM" or "Applicant") Plant B-1 site. Proposed remediation efforts would generally be located at 1234 North Victory Place, 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place (Project Site) in the City of Burbank. As shown in **Figure 1: Regional Vicinity Map**, the Proposed Project is located in the central portion of City. The Project Site consists of two main areas: 1) the property at 1234 North Victory Place, which is northwest of the intersection at North Victory Place and railroad tracks owned by the Los Angeles County Metropolitan Transportation Authority (Metro) and Amtrak (Assessor Parel Number [APN] 2462-017-020) (SVE treatment plant property); and 2) the portion of the Project Site generally located at 1501 North Victory Place, 1800 West Empire Avenue, and 1301 North Victory Place within the parking lots of the northeastern portion of the Burbank Empire Center (APN 2462-017-18, -29, -030, -032) (SVE well field). The entire Project Site is shown in **Figure 2: Local Vicinity Map.**

Project Description

The Project would consist of four primary elements: 1) dismantling and removal of the existing legacy SVE treatment plant and associated structures; 2) installation of a new SVE treatment system at the north corner of the SVE treatment plant property; 3) installation of 27 additional SVE wells beneath the Burbank Empire Center parking lots within the SVE well field; and 4) installation of an underground piping network to connect

the new wells to the proposed SVE treatment system. See Figure 3: Proposed SVE Treatment System and Figure 4: Proposed SVE Wells and Piping for Project components. The proposed components would all be designed and constructed in accordance with the Source Area Removal Plan (SARP).

The owner of the Project Site is considering redevelopment of the SVE treatment plant property (APN 2462-017-020) to include a compatible commercial use to be constructed adjacent to the proposed SVE treatment system. Several potential commercial uses have been presented to the City, but the final option has not been selected as of the commencement of CEQA analysis for this Project (August 2024). The entitlement of any proposed commercial use will undergo its own process with the City, is not part of this Project, and the construction and operation of any commercial use is, therefore, not evaluated in this Supplemental EIR. However, this constitutes a reasonably foreseeable cumulative project and is analyzed in the cumulative impacts analysis for each environmental topic of this Supplemental EIR.

The entire Project Site is designated as Regional Commercial by the City's General Plan, which provides for regional employment and shopping destinations that play an important role in the City's economy by residents of the City and surrounding cities.

The SVE treatment plant property is zoned as M-2 General Industrial, which is intended for the development of manufacturing process, fabrication and assembly of goods and materials; and the SVE well field, which comprises a portion of the Burbank Empire Center, is zoned as PD 97-3 (Planned Development), which permits any use, provided that that use is specifically listed as a permitted use in the approved Development Agreement for the Planned Development

Project Construction

Project construction is anticipated to be conducted from spring of 2025 to late spring of 2026 (assumed to be up to 15 months). Project construction activities would consist of demolition of the existing legacy SVE treatment plant, Project Site grading, installation of new electrical infrastructure, and construction of the proposed SVE treatment system and associated wells and piping. Demolition activities would generate approximately 350 tons of asphalt; 2,295 tons of concrete; 100 tons of pipelines (metal scrape); and 5 tons of carbon. Demolition debris would be transported off-site for proper disposal. For the purposes of the environmental analysis, it is assumed that construction of the proposed SVE Phase I cryogenic cooling/condensation (C3) system would not overlap with construction of the proposed SVE wells and piping. Demolition of the existing legacy SVE treatment plant would occur first, followed sequentially by the construction of the proposed SVE Phase I C3 system, installation of the proposed SVE wells and piping, and installation of the SVE Phase II carbon system. The duration of demolition of the existing legacy SVE treatment plant would occur over approximately 3 months, construction for the proposed SVE Phase I C3 system would occur over approximately 6 months, and construction of the proposed SVE wells and piping would occur over approximately 6 months. Construction for the SVE Phase II carbon system is to be determined and would occur after SVE Phase I C3 System operations have been completed. On-site construction activities would include a workforce of approximately six individuals. Construction would occur consistent with City noise policies, as presented in Burbank Municipal Code (BMC) Section 9-1-1-105.10. Specifically, construction of the Proposed Project would occur Monday through Friday from 7:00 a.m. to 7:00 p.m. and Saturday from 8:00 a.m. to 5:00 p.m. During construction of the proposed SVE treatment system, short-term, temporary closures of the lanes adjacent to North Victory Place and Empire Avenue may be required for construction staging.

To ensure compliance with AB 52, the City respectfully requests that you assist us by providing any relevant information you may have regarding tribal cultural resources within the Project area boundaries. Your comments and concerns are important to the City's planning process. If you have any questions or concerns with the Project, please contact:

Joseph Onyebuchi, Associate Planner
City of Burbank, Community Development Department, Planning Division
150 North Third Street, P.O. Box 6459

Burbank, California 91502

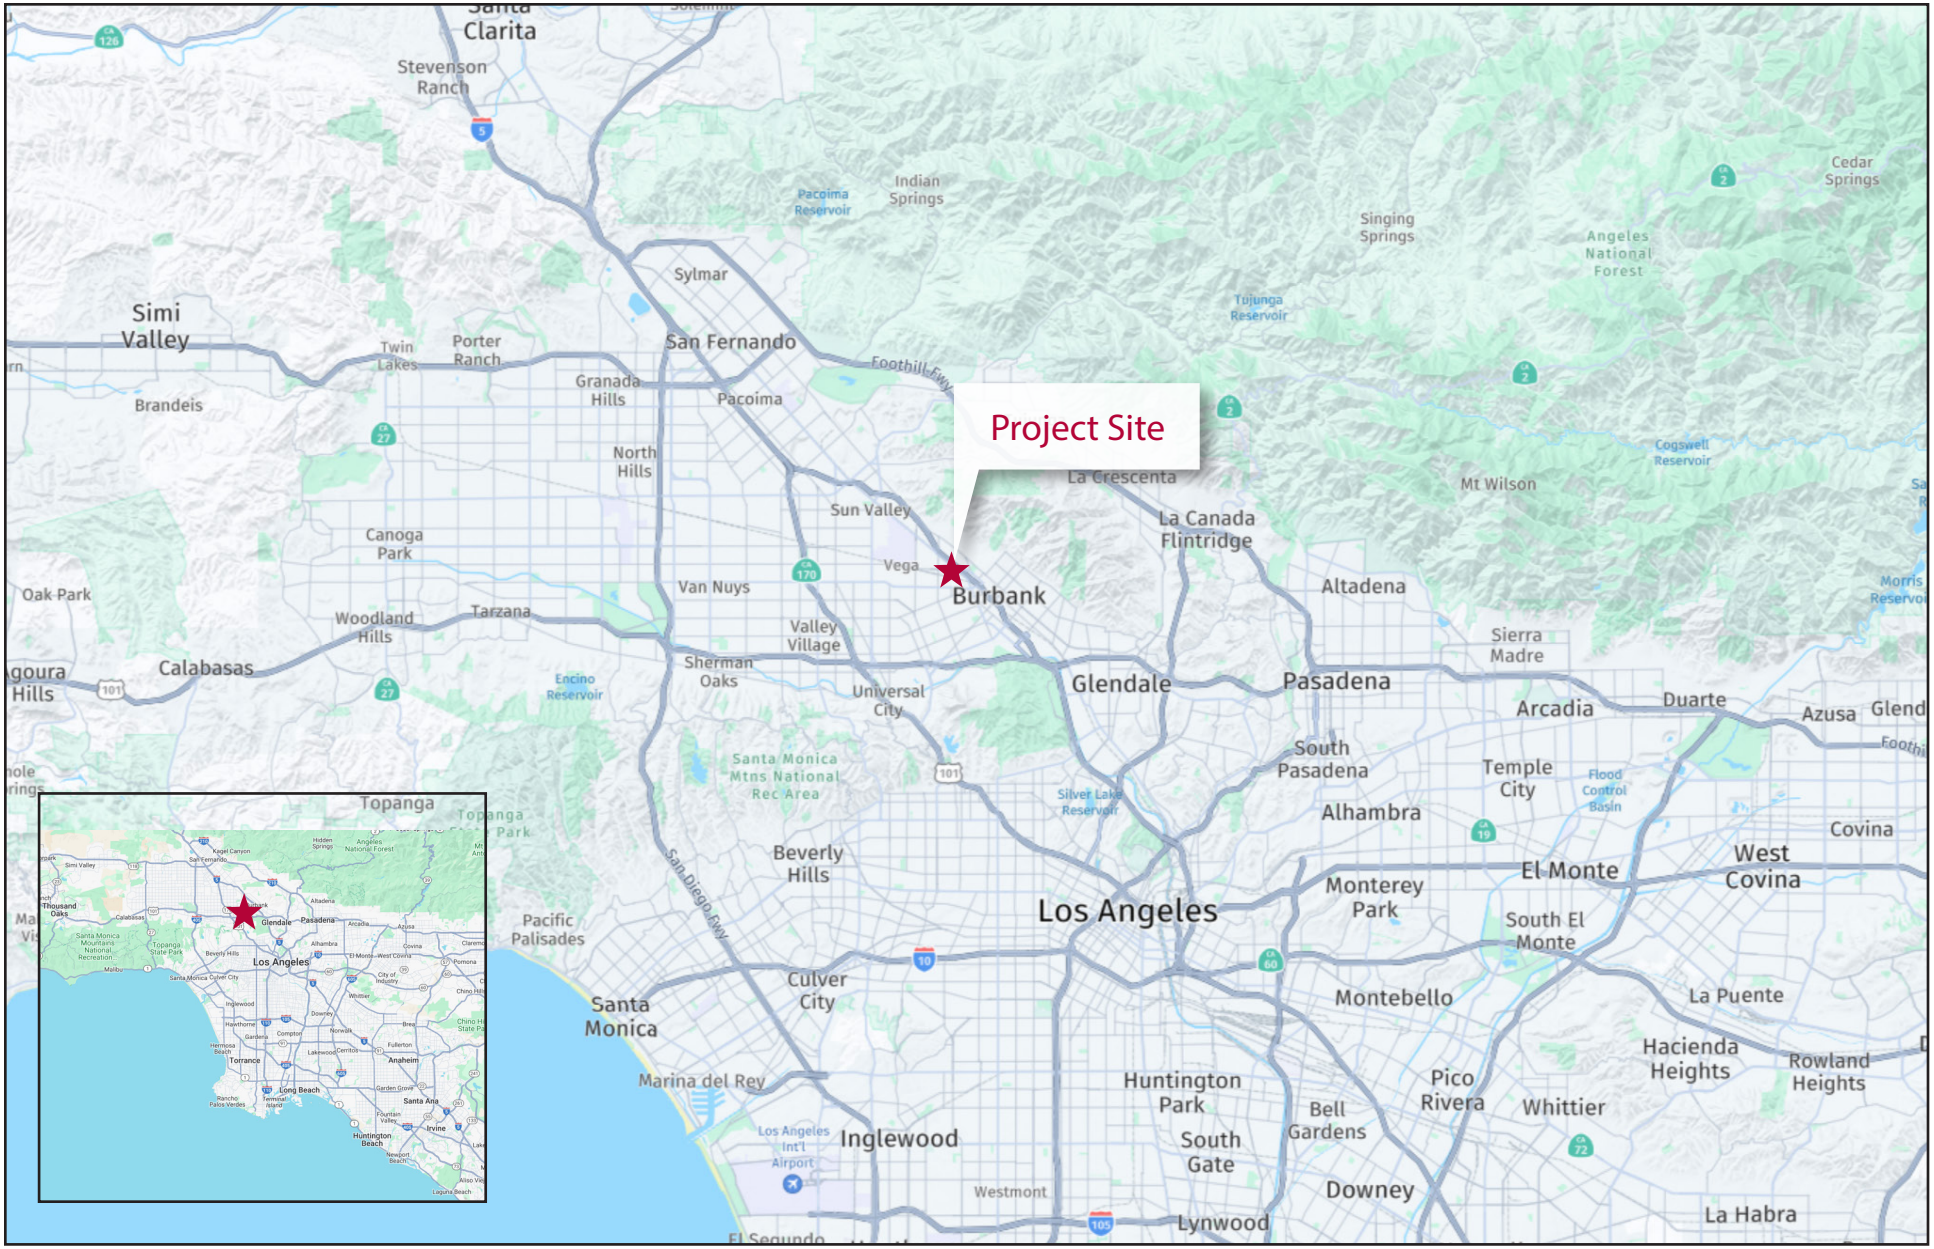

I can also be reached by phone at (818) 238-5250 or by email at JOnyebuchi@burbankca.gov.

Sincerely,

Joseph Onyebuchi, Associate Planner
City of Burbank, Community Development Department, Planning Division

MAJOR TREATMENT EQUIPMENT:

1:	LIQUID KNOCKOUT 1	GEO
2:	BLOWER SYSTEM	ROOTS 59 (20 HP)
3:	AIR HEAT EXCHANGER	AA-500
4:	COMPRESSOR	QSI-500
5:	C3 SYSTEM	GEO
6:	NAPL TANK	-
7:	2,000 LB GAC VESSEL	VPM-2000
8:	2,000 LB GAC VESSEL	VPM-2000
9:	400 LB $KMnO_4$ VESSEL	-

NOTES:

SVE - SOIL VAPOR EXTRACTION

SCFM - STANDARD CUBIC FEET PER MINUTE

UST - UNDERGROUND STORAGE TANK (150-GALLON TANK LOCATED BELOW SVE PIPING TO COLLECT CONDENSATE)

1. GEO C3 (COMPRESSION, COOLING, AND CONDENSATION) SVE SYSTEM, 500 SCFM
2. NEW SVE HIGH-VACUUM AND LOW-VACUUM INFLUENT PIPING (AS WELL AS AIR INJECTION PIPING THAT COULD ALSO BE USED AS ADDITIONAL EXTRACTION LINE) TO BE CONNECTED TO EXISTING UNDERGROUND HEADER PIPING WHERE SHOWN AND CONTINUED UNDERGROUND TO STUB-UP AREA NEAR SVE UNIT.

   ALL SVE INFLUENT PIPING TO BE STUBBED UP TO ABOVEGROUND, WHERE A TEE WILL BE INSTALLED, WITH THE VAPORS ROUTED TO THE SVE UNIT.

   ON TOP OF THE TEE A TOP-DRIVE PISTON PUMP WILL BE INSTALLED TO REMOVE ANY CONDENSATE THAT MAY COLLECT IN THE BASE OF THE STUBBED-UP PIPING. ANY CONDENSATE WILL BE PUMPED TO AN ABOVEGROUND STORAGE TANK FOR TEMPORARY STORAGE AND DISPOSAL.

   EXISTING INSTRUMENT AIR LINE FROM VAULTS TO BE STUBBED UP TO TREATMENT PAD FOR POTENTIAL FUTURE USE.
3. ELECTRICAL POWER TO THE SVE UNIT WILL BE ROUTED UNDERGROUND FROM THE EXISTING TRANSFORMER AREA ON THE EAST SIDE OF THE EXISTING BUILDING.
4. GRASSY SLOPE TO BE FILLED TO PROVIDE A LEVEL SURFACE FOR SVE EQUIPMENT PAD. DRAINAGE FEATURES WILL BE CONSTRUCTED AS REQUIRED.

   ALL REMOVALS SHALL BE IN ACCORDANCE WITH FEDERAL, STATE, AND CITY OF BURBANK REQUIREMENTS.

   CONTRACTOR SHALL CALL USA PRIOR TO START OF DEMOLITION TO MARK ALL UTILITY LINES.

   CONTRACTOR TO FIELD SURVEY ALL UTILITIES. CONTRACTOR TO PERFORM GEOPHYSICAL SURVEY PRIOR TO PERFORMING EXCAVATION ACTIVITIES.

   CONTRACTOR TO PERFORM CONSTRUCTION SURVEY OF THE EXISTING PIPING AT THE EXCAVATION AREAS.

   CONTRACTOR TO CAP ALL UTILITIES PER THE UTILITY SURVEYORS REQUIREMENTS.
