ALERT - CA Senate Bill 2 imposes an additional fee of \$75 up to \$225 at the time of recording on certain transactions effective January 1, 2018. Please contact your First American Title representative for more information on how this may affect your closing.

1. According to the latest available equalized assessment roll in the office of the county tax assessor, there is located on the land a(n) Commercial Structure known as 2311 North Hollywood Way, Burbank, CA.

2. According to the public records, there has been no conveyance of the land within a period of twenty-four months prior to the date of this report, except as follows:

None

3. This preliminary report/commitment was prepared based upon an application for a policy of title insurance that identified land by street address or assessor's parcel number only. It is the responsibility of the applicant to determine whether the land referred to herein is in fact the land that is to be described in the policy or policies to be issued.

The map attached, if any, may or may not be a survey of the land depicted thereon. First American Title Insurance Company expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of this Commitment or the Policy, if any, to which the map is attached.

1. EXECUTIVE SUMMARY

PSI has completed a Phase I Environmental Site Assessment (ESA) of the Burbank Retail Building located in Burbank, California. The assessment was performed in general accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-97, modified and amended to comply with the contract between PSI and Gort Ltd., LP, dated October 1, 1998. Any exceptions to, or deletions from the ASTM E 1527-97 standard of practice are described in Section 2.4 of this report. In connection with the Phase I ESA, assessment of environmental issues beyond the consideration of ASTM E 1527-97 was conducted pursuant to the authorized scope of services for asbestos in building materials.

The subject site consists of two parcels of land totaling 12.21 acres of land, which include a large irregular-shaped parcel and a smaller rectangular-shaped parcel. The large irregular-shaped parcel of land is currently developed with a one-story commercial retail building totaling approximately 97,405 square feet in size and is also improved with an associated parking lot. The building is currently occupied by Fry's Electronics, a consumer retail electronics and major appliance store. The smaller rectangular-shaped parcel is currently vacant and undeveloped. According to information provided by the client and historical sources, the commercial retail building was originally built in 1962 as a retail store which was later acquired by Lockheed in the mid-1960's and utilized as an office building, and recently renovated for commercial retail use in 1996. Also in 1962, the northeast portion of the subject site was developed with a gasoline service station, later acquired by Lockheed Corporation in the mid-1960's and utilized as an automotive repair and fueling facility until demolition in 1992. Prior to the development of the site in 1962, it appears that the subject site was primarily developed with a dairy facility from prior to 1928 to 1962. Agricultural land, a small store, and an auto salvage yard were also observed to be developed at the subject site during this time frame.

As stated above, a gasoline service station was originally developed on the northeast portion of the subject site in approximately 1962. In the mid-1960's, Lockheed Corporation acquired the gasoline service station, identified as Building 76A, and converted the station into an automotive service and fueling facility for Lockheed fleet vehicles. As stated in Section 2.3, Information Reported By User, Building 76A was demolished and the USTs and clarifier were removed from the subject site in 1992. Soil in the close proximity of Building 76A was found to contain PCE, diesel fuel and hydraulic fluid/oil. From 1992 to 1995, a total of seven environmental investigations were performed at the former location of Building 76A. Impacted soil was removed from the subject property. In May 1995, no further environmental action was planned for the subject property and Lockheed Martin Corporation requested that closure of the environmental remediation for the subject site be granted by the California Regional Water Quality Control Board (CRWQCB). On July 5, 1995, a letter was submitted by the CRWQCB stating that no further remediation was required at the subject property. The

contaminated areas of the subject property identified by previous site investigations had been remediated to the extent possible that would greatly reduce the threat to the groundwater beneath the site. Conformity soil samplings and testings had indicated that the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161 issued by the CRWQCB on December 10, 1987. As a result, the subject property was excluded from requirements set forth in Cleanup and Abatement Order No. 87-161. Based on the above, the former petroleum storage tank is not considered to represent a recognized environmental condition in connection with the subject property at this time.

1.1 PHASE I ESA

In accordance with ASTM Standard E 1527-97, this Phase I Environmental Site Assessment included reconnaissance of the subject and adjoining properties, interviews, and review of historical records and regulatory databases in an effort to identify evidence of recognized environmental conditions that may impact the property. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

1.2 OTHER ENVIRONMENTAL ISSUES

ASBESTOS

The limited asbestos survey did not identify the presence of asbestos-containing material (ACM) at or above regulated levels in connection with the area surveyed pursuant to the scope of this assessment.

1.3 RECOMMENDATIONS

Based on investigation of the property for evidence of recognized environmental conditions and other environmental issues, PSI offers the following recommendations.

- No further assessment of recognized environmental conditions appears warranted.

This summary does not contain all the information that is found in the full report. The report should be read in its entirety to obtain a more complete understanding of the information provided, and to aid in any decisions made or actions taken based on this information.

2. INTRODUCTION

2.1 PURPOSE AND SCOPE

This Phase I Environmental Site Assessment (ESA) was performed to search for evidence of recognized environmental conditions that may have an adverse environmental impact upon the property. The assessment included records review, interviews and reconnaissance to evaluate whether such conditions exist in connection with the property. The protocol utilized for this Phase I ESA was in general accordance with the requirements of ASTM Standard E 1527-97 as well as the requirements outlined by the client as specified in the assessment contract. In connection with the Phase I ESA, assessment of environmental issues beyond the consideration of ASTM E 1527-97 was conducted for asbestos in building materials. The ASTM non-scope assessment services were performed in general accordance with the authorized assessment contract. This report includes documentation to support the analysis, opinions and conclusions as presented.

2.2 SPECIAL TERMS AND CONDITIONS

AUTHORIZATION

Authorization to perform this assessment was given on October 1, 1998 by a signed copy of PSI Proposal No. 888-8349, between Gort Ltd. LP, USG Annuity & Life Company and PSI.

PROPERTY ACCESS

Instructions as to the location of the property, access, and an explanation of the property and facilities to be assessed were provided by Ms. Chilese of Gort Ltd., LP.

USE BY THIRD PARTIES

This report was prepared pursuant to the contract PSI has with Gort Ltd., LP and USG Annuity & Life Company. That contractual relationship included an exchange of information about the property that was unique and between PSI and its client and serves as the basis upon which this report was prepared. Because of the importance of the communication between PSI and its client, reliance or any use of this report by anyone other than Gort Ltd., LP, and USG Annuity & Life Company, for whom it was prepared, is prohibited and therefore not foreseeable to PSI.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to PSI's contract with Gort Ltd., LP and USG Annuity & Life Company. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

2.3 METHODOLOGY AND RESOURCES

RECONNAISSANCE

Ground reconnaissance was conducted on October 15, 1998 by Mr. Mark E. Smith of PSI, accompanied by Mr. Luis Magallanes, Customer Service Manager of Fry's Electronics. The ground reconnaissance consisted of observing the periphery of the property and viewing the site from accessible adjacent public thoroughfares. Interior portions of the property were systematically traversed to provide an overlapping field of view, wherever possible. The periphery of structures, where present on the property, were observed along with interior accessible common areas, maintenance and repair areas and a representative number of occupant spaces. Visual reconnaissance of adjoining properties was limited to areas and facilities that were readily observable from the subject property or from public access areas. Photographs were taken to document the features observed during the reconnaissance and environmental conditions of concern, where possible. A photographic log and copies of the photographs are included in Appendix D.

INTERVIEWS

Interviews were conducted with persons as noted in the following table. Pertinent information reported by the interviewed parties is discussed in appropriate sections of the report.

NAME	FUNCTION	EMPLOYER	DATE	CONTACT
Ms. Betty Chilese	Client Representative	Newmark Capital Realty, Inc.	10/8/98	(415) 956-9858

Mr. Kapil Mirchandani	Store Manager	Fry's Electronics	10/15/98	(818) 238-3473
Mr. Luis Magallanes	Customer Service Supervisor	Fry's Electronics	10/15/98	In Person
Inspector Drossel	Fire Inspector	City of Burbank Fire Department	10/20/98	N/A

ENVIRONMENTAL REGULATORY DATABASE INFORMATION

Information for the standard Federal and state environmental record sources specified in ASTM Standard E 1527-97 § 7.2.1.1 was obtained through VISTA Information Solutions STARView System, operated by PSI under a license agreement with VISTA. The database information was reviewed to help identify evidence of recognized

environmental conditions in connection with the property. Unmappable (orphan) sites listed in the database with insufficient address or geocoding information to be mapped were evaluated for potential location within the approximate minimum search distance (AMSD). Copies of the VISTA research data and a description of the databases are included in Appendix C of this report.

HISTORICAL USE INFORMATION

A history of the previous uses of the property, and properties in the surrounding area to the extent that this information was revealed in the course of researching the subject property, was developed consistent with practices specified in ASTM Standard E 1527-97 § 7.3. From the standard historical sources specified in the ASTM practice, PSI reviewed those sources listed below. Copies of representative historical source information are provided in applicable Appendices.

- Aerial photographs dated 1928, 1939, 1941, 1945, 1948, 1950, 1958 and 1963 reviewed at Fairchild Collection, Whittier College, Whittier, California.
- Aerial photograph dated 1987, reviewed from PSI's in-house aerial photograph collection.
- Fire insurance maps dated 1953, 1954, 1956, 1960, 1966, 1968 and 1969 obtained from at VISTA Information Solutions, Inc.
- Historical United States Geological Survey (USGS) 7.5 minute topographic maps titled Burbank, California, dated 1966, photorevised 1972.
- Local street directories for 1971, 1976, 1981, 1986, 1991, 1996 published by Haines & Company, Inc. reviewed at Haines Information Services, Inc.
- Chain of title records for the subject property obtained by PSI through Milliken & Michaels.
- Building department records for 1992 and 1996 obtained at City of Burbank Building Department.
- Zoning/land use records for 1998 obtained at City of Burbank Planning Department.

The first obvious developed use of the property identified in this assessment was prior to 1928. Historical information sources researched in this assessment allowed uses of the property to be traced from the present back to 1928. This postdates the property's obvious first developed use and constitutes historical data failure per ASTM Standard E 1527-97 § 7.3.2.3.

INFORMATION REPORTED BY USER

Pursuant to ASTM Standard E 1527-97 § 5.2 and § 5.3, PSI requested that the client provide information on any environmental liens recorded against the property, communicate any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property, and identify key site managers for interview purposes. Information that was reported has been incorporated into and is discussed in appropriate sections of the report. Documents provided by the client for our

use in preparation of this report are presented in applicable Appendices, and included four previous reports and a letter as listed below:

- Specifications for Demolition and Grading Plant A-1 South, Building 76A, by ASL Consultants, Inc. of Arcadia, California, dated March 1992.
- Lockheed Corporation, Burbank Operable Unit Consent Decree, presented by Barry M. Hartman and William A. Weinischhke, United States Department of Justice, dated March 25, 1992.
- Lockheed Martin, Final Report of Soil Remediation for Building 76A, Lockheed Plant A-1 South, Burbank, California, prepared by Lockheed Martin Corporation of Burbank, California, dated May 1995.
- Superfund and RWQCB Cleanup Activities, Burbank – Lockheed Area, White Paper, prepared by City of Burbank City Attorney's Office and Freilich, Kaufman, Fox & Sohagi, dated August 1995.
- Response Letter for Soil Remediation Final Report, Lockheed Plant A-1 South, Building 76A, California Regional Water Quality Control Board, Los Angeles Region, dated July 1995.

According to the above-referenced reports, Lockheed Martin Corporation Plant A-1 South (the subject property) was originally utilized for agricultural purposes and as a dairy farm until the 1940's, at which time Lockheed began using portions of the subject site to support their Burbank aircraft manufacturing facilities. From the 1940's through the 1960's, the subject site had various uses, including an automotive parking lot for Lockheed employees, small restaurants which bordered Vanowen Street, and an auto salvage yard. Building 76 (presently utilized as the on-site retail warehouse structure, located on the southern portion of the subject property) and Building 76A (previously developed on the northeast portion of the subject site) were initially constructed as portions of a Unimart retail sales facility in the 1960's. Building 76A was utilized as a gasoline service station for the Unimart facility until Lockheed acquired Building 76 and Building 76A.

Building 76A was formerly operated as an auto service center and was utilized by Lockheed for fleet vehicle maintenance and fueling. This facility included a total of four, single-walled, steel, 12,000-gallon USTs; one, 550-gallon, steel-walled, waste oil tank; one concrete, 1,600-gallon clarifier; and seven dispensers. Two of the USTs were used for unleaded gasoline storage, and one UST was used for diesel fuel storage. The remaining UST was used for the storage of tetrachloroethene (PCE) and served as a central supply point for Lockheed's other plants in Burbank. The PCE was dispensed to tanker trucks and transported to the various Lockheed plants in the City of Burbank.

Building 76A was demolished in 1992 and included the removal of the four USTs and associated piping and dispensers; removal of the building, floor slab, and foundations; and removal of all below grade improvements including hydraulic lifts, clarifiers, storm

drains, utilities and sewers. The USTs and clarifier were removed under supervision of an Inspector of the City of Burbank Fire Department, and the Inspector directed the collection of 21 soil samples at this location. Based on the laboratory analytical results of the soil samples collected, soil in the close proximity of Building 76A was found to contain PCE, diesel fuel and hydraulic fluid/oil.

From 1992 to 1995, a total of seven environmental investigations were performed at the former location of Building 76A. Six of the investigations included the installation of soil borings or soil vapor probes in the Building 76A area. A total of 18 of the 426 soil samples which were submitted to the laboratory were found to contain concentrations of PCE in excess of 1.0 mg/kg. Approximately 1,380 tons of soil found to contain PCE was excavated and removed from the subject site, and 109 verification soil samples were collected from the excavation sidewalls and bottoms. The verification soil samples collected from the excavation sidewalls contained less than 150 µg/kg of PCE. Diesel fuel and hydraulic/waste oil was also present in the soil with the PCE was also removed, however specific concentrations of diesel fuel and hydraulic/waste oil were not reported.

Following approval of the excavations and the backfill material by the California Regional Water Quality Control Board (CRWQCB), the excavations were backfilled with soil. The verification soil samples collected from the excavation base and sidewalls of the soil remaining in place did not detect the presence of PCE in excess of 150 µg/kg. In May 1995, no further environmental action was planned for the subject property and Lockheed Martin Corporation requested that closure of the environmental remediation for the subject site be granted by the California Regional Water Quality Control Board (CRWQCB). On July 5, 1995, a letter was submitted by the CRWQCB stating that no further remediation was required at the subject property. The contaminated areas of the subject property identified by previous site investigations had been remediated to the extent possible that would greatly reduce the threat to the groundwater beneath the site. Conformity soil samplings and testings had indicated that the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161 issued by the CRWQCB on December 10, 1987. As a result, the subject property was excluded from requirements set forth in Cleanup and Abatement Order No. 87-161. Based on the above, the former petroleum storage tank is not considered to represent a recognized environmental condition in connection with the subject property at this time.

ASTM NON-SCOPE SERVICES AND OTHER RESOURCES

Methodology and protocols used for evaluation of conditions and issues beyond the scope of ASTM Standard E 1527-97 are described in Section 7 of this report. Other resources and information accessed for purposes of this site assessment are discussed in appropriate sections of the report. Credentials and certifications of the environmental professionals responsible for preparation of this report are included in Appendix F.

2.4 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

Along with all of the limitations set forth in various sections of the ASTM Standard E 1527-97 protocol, the accuracy and completeness of this report is necessarily limited by the following:

- Access Limitations - None
- Physical Obstructions to Observations - None
- Outstanding Information Requests - None
- Historical Data Source Failure – Historical records prior to 1928 were not readily available for review for this Phase I ESA report.
- Other - None

3. PROPERTY DESCRIPTION AND PHYSICAL SETTING

3.1 LOCATION

The subject property is known as the Burbank Retail Building, and it is located at 2311 North Hollywood Way, in the City of Burbank, Los Angeles County, California 91505. Major streets which bound the subject site include Vanowen Street to the north, North Hollywood Way to the east, and Valhalla Drive to the south. The Burbank-Glendale-Pasadena Airport is located in the northwestern vicinity of the subject site.

The subject property's location is identified on the site vicinity map provided as Figure 1 in Appendix A.

3.2 PROPERTY VICINITY CHARACTERISTICS

The property is located in a predominantly industrial and commercial setting.

A site vicinity sketch is included as Figure 2 in Appendix A.

3.3 DESCRIPTION OF PROPERTY AND IMPROVEMENTS

The property consists of two parcels of land totaling approximately 12.21 acres. A site plan showing site boundaries and current development was provided for our use and is included in the Appendix.

Improvements to the subject property consist of a one-story, concrete tilt-up commercial retail facility. The structure consists of approximately 97,405 square feet of rentable space. The property is also developed with an 899-space vehicular parking lot, and minimal planter landscaping consisting of small shrubs and trees along the perimeter and in the parking lot planters. The remaining portion of the subject site is vacant, undeveloped land. According to information provided to PSI and building permits on-file at the City of Burbank Building Department, the current subject site structure was originally developed in 1962 as a store facility, later acquired by Lockheed in the mid-1960's and utilized as an office facility, and recently renovated for commercial retail use in 1996.

Photographs showing prominent features of the site are provided in Appendix D.

UTILITIES

Utility systems identified at the property, as specified in ASTM Standard E 1527-97 § 8.4.1 and § 8.4.3 are as follows:

- The facility heating ventilating and air conditioning (HVAC) system is located on the roof. The system is fueled by electricity.

- Sewage disposal at the property is provided through the City of Burbank municipal sanitary sewer system.
- Potable water at the property is obtained through the City of Burbank municipal water system.

3.4 PHYSICAL SETTING

TOPOGRAPHIC MAP REVIEW

A current United States Geological Survey (USGS) 7.5 minute topographic map (or equivalent) showing the area where the property is located was obtained and reviewed as specified in ASTM Standard E 1527-97 § 7.2.3. The 1966 (photo revised 1972) USGS Burbank, California quadrangle map was reviewed. According to the contour lines on the topographic map, the property is located approximately 660 feet above mean sea level. The contour lines in the area of the property indicate the area slopes gently to the southeast. No water bodies are evident on or adjacent to the property. The subject property was denoted as being developed with the current structure developed at the subject site and a former structure which was denoted on the north side of the site along Vanowen Street.

SUPPLEMENTAL PHYSICAL SETTING INFORMATION

The following discretionary physical setting sources pursuant to ASTM Standard E 1527-97 § 7.2.3, were obtained and reviewed to provide supplemental information regarding soils and hydrogeology in the vicinity of the property.

Subsurface Soils - According to the United States Department of Agriculture Soil Conservation Service, the near surface soil association underlying the subject site belongs to the Tujunga-Soboba associations. These soils are characterized by somewhat excessively to excessively drained, brownish-gray or grayish-brown sand or loamy fine sand, and pale brown, neutral cobbly, very fine sandy loam. Lower layers are pale brown and light brownish-gray, very cobbly loamy coarse sand, calcareous in the lower part. Subsurface permeability is rapid to very rapid.

Hydrogeology – According to the Upper Los Angeles River Area, Groundwater Contour Map, published by the ULARA Watermaster, dated Spring 1990, depth to first groundwater, beneath the subject property, is approximately 170 feet below ground surface elevation. Groundwater flow direction is to the southeast.

4. PROPERTY USAGE

4.1 CURRENT USES OF THE PROPERTY

Current use of the property as determined through observation, interviews and records review is described below.

The subject site is currently developed with a commercial retail warehouse facility. The current tenant at the subject site is Fry's Electronics, a consumer retail electronics and major appliance store.

The User should refer to Section 6 of this report for additional site reconnaissance details.

4.2 PAST USES OF THE PROPERTY

To the extent that indications of past uses of the property were identified through historical records review, reconnaissance observation, interviews, or through client provided information, they are identified below.

Year(s)	Property Use	Reference Source
1928	The subject property was observed as being developed with a dairy facility (denoted in the Sanborn Fire Insurance Maps). The subject site appeared to be developed with several farm-like structures, while designated feeding areas for cattle were observed surrounding the structures. In addition, the western portion of the site was observed as being utilized for agricultural purposes.	Aerial Photograph
1939	The subject property was observed as being developed with a dairy facility with the western portion of the site developed for agricultural purposes.	Aerial Photograph
1941	The subject property was observed as being developed with a dairy facility with the western portion of the site developed for agricultural purposes.	Aerial Photograph
1945	The subject property was observed as being developed with a dairy facility. Vacant land replaced agricultural land observed on the western portion of the subject site, and a parking lot was observed on the northeastern portion of the site.	Aerial Photograph
1948	The subject property was observed as being developed with a dairy facility. Vacant land was observed on the western portion of the subject site, and a parking lot was observed on the northeastern portion of the site.	Aerial Photograph

Year(s)	Property Use	Reference Source
1950	The subject property was observed as being developed with a dairy facility. Vacant land was observed on the western portion of the subject site, and a parking lot was observed on the northeastern portion of the site.	Aerial Photograph
1953	The subject property was denoted as being developed with a dairy facility throughout the central portion of the site, and a small store on the southeastern portion of the site.	Fire Insurance Maps
1954	The subject property was denoted as being developed with a dairy facility throughout the central portion of the site, and a small store on the southeastern portion of the site.	Fire Insurance Maps
1956	The subject property was denoted as being developed with a dairy facility throughout the central portion of the site, and a small store on the southeastern portion of the site.	Fire Insurance Maps
1958	The subject property was observed as being developed with a dairy facility. Vacant land was observed on the western portion of the subject site, and a parking lot was observed on the northeast portion of the subject site.	Aerial Photograph
1960	The subject property was denoted as being developed with a dairy facility throughout the central portion of the site, and a small store on the southeastern portion of the site.	Fire Insurance Maps
1963	The dairy facility, parking lot, and small store observed in the previous aerial photographs and Sanborn Fire Insurance Maps were observed to be replaced with a store facility on the southern portion of the site (currently utilized as the commercial retail structure) and a gasoline service station on the northeastern portion of the site. The remaining northwestern and western portions of the site appeared to be vacant and undeveloped.	Aerial Photograph
1966	Individual structures, including the store facility and gasoline service station, were denoted on the subject property.	Topographic Map
1966	The subject property was denoted as being developed with a store facility on the southern portion of the site and a gasoline service station on the northeastern portion of the site. The dairy facility and small store were no longer denoted as being developed at the subject site.	Fire Insurance Maps

Year(s)	Property Use	Reference Source
1968	The subject property was denoted as being developed with a store facility on the southern portion of the site and a gasoline station on the northeastern portion of the site.	Fire Insurance Maps
1969	The store facility observed in the previous aerial photographs and denoted in the Sanborn maps was identified as a "Lockheed Aircraft Corporate Office" facility. The gasoline service station was denoted on the northeastern portion of the subject site.	Fire Insurance Maps
1971	The subject site was listed as Lockheed Aircraft Corporation and Lockheed Credit Union.	Historical City Directories
1976	The subject property was listed as Lockheed Aircraft Corporation and Lockheed Credit.	Historical City Directories
1981	The subject property was listed as Lockheed Aircraft Corporation and Lockheed Credit.	Historical City Directories
1987	The subject property was observed as being developed with the Lockheed facility and an associated automotive service station operated by Lockheed.	Aerial Photograph
1986	The subject property was listed as Lockheed Aircraft Union and Lockheed Federal Credit Union.	Historical City Directories
1991	The subject property was listed as Lockheed Federal Credit Union.	Historical City Directories
1992	According to building permits, a demolition permit was issued for Building 76A (the automotive service station operated by Lockheed) was demolished. Grading activities were also documented for this portion of the subject property.	City of Burbank
1996	The subject property address was listed as not being occupied.	Historical City Directories
1996	According to building permits, tenant improvements, including the development of a car stereo bay, were issued for 2311 North Hollywood Way	City of Burbank
1998	The subject property was observed as being developed with a commercial retail facility occupied by Fry's Electronics, a consumer electronics and appliance store.	PSI Site Reconnaissance

The historical information presented above reveals evidence of recognized environmental conditions in connection with the subject property. Evidence of the recognized environmental conditions is summarized below along with the reasons for our opinion:

- A gasoline service station, reportedly operated by Unimart, was originally developed on the northeast portion of the subject site in approximately 1962. In the mid-1960's Lockheed Corporation acquired the gasoline service station, identified as Building 76A, and converted the station into an auto service center for Lockheed fleet vehicles. As stated in Section 2.3, Information Reported By User, Building 76A was demolished and the USTs and clarifier were removed from the subject site in 1992. Soil in the close proximity of Building 76A was found to contain PCE, diesel fuel and hydraulic fluid/oil. From 1992 to 1995, a total of seven environmental investigations were performed at the former location of Building 76A. Impacted soil was removed from the subject property. In May 1995, no further environmental action was planned for the subject property and Lockheed Martin Corporation requested that closure of the environmental remediation for the subject site be granted by the California Regional Water Quality Control Board (CRWQCB). On July 5, 1995, a letter was submitted by the CRWQCB stating that no further remediation was required at the subject property. The contaminated areas of the subject property identified by previous site investigations had been remediated to the extent possible that would greatly reduce the threat to the groundwater beneath the site. Conformity soil samplings and testings had indicated that the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161 issued by the CRWQCB on December 10, 1987. As a result, the subject property was excluded from requirements set forth in Cleanup and Abatement Order No. 87-161. Based on the above, the former petroleum storage tank is not considered to represent a recognized environmental condition in connection with the subject property at this time.

4.3 ENVIRONMENTAL LIENS

No knowledge of environmental liens recorded against the property were reported to PSI.

As part of the scope of services, PSI contracted with Milliken & Michaels to prepare a chain of title records report for the property. See Appendix B for a copy of their report. Review of the chain of title records did not identify environmental liens recorded against the property.

4.4 CURRENT AND PAST USES OF ADJOINING PROPERTIES

To the extent that indications of current and past uses of adjoining properties were identified through reconnaissance observation, interviews, records review or through client provided information, they are described below. Locations of adjoining properties discussed can be found on the site vicinity sketch in Appendix A.

Year(s)	Property Use	Reference Source
North		
1928	The property adjacent to the north of the subject site across Vanowen Street and a railroad track was observed to be utilized for agricultural purposes as row crops.	Aerial Photograph
1939	The property adjacent to the north of the subject site across Vanownen Street and a railroad track was observed to be vacant and undeveloped.	Aerial Photograph
1941	The property adjacent to the north of the subject site across Vanowen Street and a railroad track was observed to be developed with a large commercial-industrial facility (Lockheed), appearing to be an airplane manufacturing plant (numerous airplanes were observed surrounding the perimeter of the facility). The Burbank-Glendale-Pasadena Airport was also observed in the northwestern vicinity of this facility.	Aerial Photograph
1945	The property adjacent to the north of the subject site across Vanowen Street and a railroad track was observed to be developed with a large commercial-industrial facility (Lockheed), appearing to be an airplane manufacturing plant (numerous airplanes were observed surrounding the perimeter of the facility). The Burbank-Glendale-Pasadena Airport was also observed in the northwestern vicinity of this facility.	Aerial Photograph
1948	The property adjacent to the north of the subject site across Vanowen Street and a railroad track was observed to be developed with a large commercial-industrial facility (numerous airplanes were observed surrounding the perimeter of the facility). The Burbank-Glendale-Pasadena Airport was observed in the northwestern vicinity of this facility.	Aerial Photograph
1950	The property adjacent to the north of the subject site across Vanowen Street and a railroad track was observed to be developed with a large commercial-industrial facility (numerous airplanes were observed surrounding the perimeter of the facility). The Burbank-Glendale-Pasadena Airport was observed in the northwestern vicinity of this facility.	Aerial Photograph
1953	The property adjacent to the north was not denoted in the Sanborn Fire Insurance Map provided.	Fire Insurance Maps
1954	The property adjacent to the north was not denoted in the Sanborn Fire Insurance Map provided.	Fire Insurance Maps

Year(s)	Property Use	Reference Source
North		
1958	The property adjacent to the north of the subject site across Vanowen Street and a railroad track was observed to be developed with a large commercial-industrial facility (numerous airplanes were observed surrounding the perimeter of the facility). The Burbank-Glendale-Pasadena Airport was observed in the northwestern vicinity of this facility.	Aerial Photograph
1960	The property adjacent to the north was not denoted in the Sanborn Fire Insurance Map provided.	Fire Insurance Maps
1963	The property adjacent to the north was not denoted in the Sanborn Fire Insurance Map provided.	Fire Insurance Maps
1966	The property adjacent to the north across Vanowen Street and a railroad track was denoted as being developed with a large commercial-industrial facility. The Burbank-Glendale-Pasadena Airport was denoted towards the northwest vicinity of the subject site.	Topographic Map
1966	The property adjacent to the north was not denoted in the Sanborn Fire Insurance Map provided.	Fire Insurance Maps
1968	The property adjacent to the north was not denoted in the Sanborn Fire Insurance Map provided.	Fire Insurance Maps
1969	The property adjacent to the north was not denoted in the Sanborn Fire Insurance Map provided.	Fire Insurance Maps
1987	The property adjacent to the north across Vanowen Street and a railroad track was denoted as being developed with a large commercial-industrial facility. The Burbank-Glendale-Pasadena Airport was denoted towards the northwest vicinity of the subject site.	Aerial Photograph
1998	The property adjacent to the north across Vanowen Street and a railroad track was observed as being developed with a large commercial-industrial structure identified as Calstart-Advanced Transportation Technologies.	PSI Site Reconnaissance
South		
1928	The property adjacent to the south of the subject site across Valhalla Drive was observed to be utilized for agricultural purposes as row crops.	Aerial Photograph
1939	The property adjacent to the south of the subject site across Valhalla Drive was observed to be utilized for agricultural purposes as row crops.	Aerial Photograph
1941	The property adjacent to the south of the subject site across Valhalla Drive was observed to be utilized for agricultural purposes as row crops.	Aerial Photograph

Year(s)	Property Use	Reference Source
South		
1945	The property adjacent to the south of the subject site across Valhalla Drive was observed to be developed with a softball field. Vacant land was observed to the southwest.	Aerial Photograph
1948	The property adjacent to the south of the subject site across Valhalla Drive was observed to be developed with a softball field. Vacant land was observed to the southwest.	Aerial Photograph
1950	The property adjacent to the south of the subject site across Valhalla Drive was observed to be developed with a softball field. A building was observed to the southwest.	Aerial Photograph
1953	The property adjacent to the south of the subject site across Valhalla Drive was denoted as being developed with a softball field, and a "California National Guard" facility was denoted to the southwest.	Fire Insurance Maps
1954	The property adjacent to the south of the subject site across Valhalla Drive was denoted as being developed with a parking lot (replacing the softball field) and a "California National Guard" facility was denoted to the southwest.	Fire Insurance Maps
1958	The property adjacent to the south of the subject site across Valhalla Drive was observed as being developed with a parking lot, and the national guard facility denoted in the fire insurance map was observed to the southwest.	Aerial Photograph
1960	The property adjacent to the south of the subject site across Valhalla Drive was denoted as being developed with a parking lot (replacing the softball field) and a "California National Guard" facility was denoted to the southwest.	Fire Insurance Maps
1963	The property adjacent to the south of the subject site across Valhalla Drive was denoted as being developed with a parking lot, and a "California National Guard" facility was denoted to the southwest.	Fire Insurance Maps
1966	The property adjacent to the south of the subject site across Valhalla Drive was denoted as being developed. An individual structure (identified as an "Armory") was denoted to the southwest.	Topographic Map
1966	The property adjacent to the south of the subject site across Valhalla Drive was denoted as being developed with a parking lot, and a "California National Guard" facility was denoted to the southwest.	Fire Insurance Maps

Year(s)	Property Use	Reference Source

1998	The property adjacent to the east of the subject site across North Hollywood Way was observed as being developed with a commercial office building with an associated parking lot.	PSI Site Reconnaissance
West		
1928	The property adjacent to the west of the subject site was observed to be utilized for agricultural purposes as row crops.	Aerial Photograph
1939	The property adjacent to the west of the subject site was observed to be utilized for agricultural purposes as row crops.	Aerial Photograph
1941	The property adjacent to the west of the subject site was observed to be partially developed for agricultural purposes, while the remaining portion of the site appeared to be developed with an automotive parking lot and a vacant lot.	Aerial Photograph
1945	The property adjacent to the west of the subject site was observed to be partially developed with a parking lot, while the remaining portion of the site appeared to be utilized as an automotive salvage yard and vacant land.	Aerial Photograph

Year(s)	Property Use	Reference Source
West		
1948	The property adjacent to the west of the subject site was observed to be partially developed with a parking lot, while the remaining portion of the site appeared to be utilized as an automotive salvage yard and vacant land.	Aerial Photograph
1950	The property adjacent to the west of the subject site was observed to be partially developed with a parking lot, while the remaining portion of the site appeared to be utilized as an automotive salvage yard and vacant land.	Aerial Photograph
1953	The property adjacent to the west of the subject site was denoted as vacant.	Fire Insurance Maps
1954	The property adjacent to the west of the subject site was denoted as vacant.	Fire Insurance Maps
1958	The property adjacent to the west of the subject site was observed as vacant.	Aerial Photograph
1960	The property adjacent to the west of the subject site was denoted as vacant.	Fire Insurance Maps
1963	The property adjacent to the west of the subject site was denoted as vacant.	Fire Insurance Maps
1966	The property adjacent to the west of the subject site was denoted as developed, however no individual structures were denoted.	Topographic Map
1966	The property adjacent to the west of the subject site was denoted as vacant.	Fire Insurance Maps
1968	The property adjacent to the west of the subject site was denoted as vacant.	Fire Insurance Maps
1969	The property adjacent to the west of the subject site was denoted as vacant.	Fire Insurance Maps
1987	The property adjacent to the west of the subject site was observed as being developed with a parking lot and with commercial structures beyond.	Aerial Photograph
1998	The property adjacent to the west of the subject site was observed as being developed with an AGFA Film facility and a Warner Brothers facility.	PSI Site Reconnaissance

The historical information developed and reviewed for adjoining properties revealed no evidence of recognized environmental conditions in connection with the subject property.

The User should refer to Section 6 of this report for additional site reconnaissance information on the current use of adjoining property.

5. ENVIRONMENTAL REGULATORY RECORDS REVIEW

5.1 STANDARD FEDERAL AND STATE ENVIRONMENTAL RECORD SOURCES

The number of listed sites identified within the approximate minimum search distance (AMSD) from the Federal and state environmental records database listings specified in ASTM Standard E 1527-97 § 7.2.1.1 are summarized in the following table. Detailed information for sites identified within the AMSDs is provided following the table, along with an opinion about the significance of the listing to the analysis of recognized environmental conditions in connection with the subject property. Copies of the VISTA research data and a description of the databases are included in Appendix C of this report.

STANDARD FEDERAL & STATE ENVIRONMENTAL DATABASE RECORD SUMMARY					
DATABASE RECORD	AMSD (MILES)	TOTAL SITES FOUND	ON ADJ PROP	ON SUBJ PROP	DATA SOURCE
Federal NPL List	1	1	0	0	VISTA
Federal CERCLIS List	0.5	6	0	0	VISTA
Federal RCRA CORRACTS TSD Facilities List	1	1	0	0	VISTA

Federal RCRA Generators List	ADJ	8	0	1	VISTA
Federal ERNS List	SITE	0	NA	0	VISTA
State-Equivalent NPL List	1	1	0	0	VISTA
State-Equivalent CERCLIS List	0.5	2	0	0	VISTA
State Landfill and/or Solid Waste Disposal Site List	0.5	0	0	0	VISTA
State Leaking UST List	0.5	6	0	0	VISTA
State Registered UST List	ADJ	1	0	1	VISTA

5.2 DISCUSSION OF DATABASE FINDINGS

FEDERAL NPL LIST

The National Priorities List (Superfund) is EPA's database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program. A total of one NPL site was listed within one mile of the subject property. The subject property is located in the impacted area identified as a Federal NPL List site.

San Fernando Valley (Area 1)	Facility ID# CAD980894893
North Hollywood Wellfield Area	Subject site is located in impacted area
Los Angeles, CA	Operational Status Not Reported
<p>Conditions at proposal (October 15, 1984): San Fernando Valley (Area 1) is an area of contaminated ground water in the vicinity of the North Hollywood section of the City of Los Angeles, Los Angeles County, California. This area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least three million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,156 acres, contains trichloroethylene (TCE) and perchloroethylene (PCE), and to a lesser extent, carbon tetrachloride and chloroform, according to analyses conducted by the California Department of Health Services, as well as numerous local government agencies. The State's recommended drinking water guideline for TCE and PCE (five and four parts per billion respectively) are exceeded in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with TCE/PCE concentrations below the State's guidelines.</p> <p>Status (June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area. The RI was scheduled to begin in early 1986.</p> <p>Presently, the California Regional Water Quality Control Board (CRWQCB) has been active in investigating soil contamination and requiring cleanups throughout Burbank over the last several years.</p>	

FEDERAL CERCLIS LIST

The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances. A total of six CERCLIS sites were listed within 0.5 mile of the subject property. The subject property is located in an impacted area identified as a CERCLIS site.

San Fernando Valley (Area 1)	Facility ID# CAD980894893
North Hollywood Wellfield Area	Subject site is located in impacted area
Los Angeles, CA	Operational Status Not Reported
<p>The San Fernando Valley (Area 1) is also listed as a Federal NPL List site. Please refer to the Federal NPL List section for detailed information concerning this facility.</p>	

Lockheed Martin Corporation	Facility ID# CAD008255283
2555 North Hollywood Way	0.23 miles north
Burbank, CA	Operational Status Not Reported
<p>According to VISTA, the Lockheed Martin Corporation was reported as a Federal CERCLIS List site. The facility located at 2555 North Hollywood Way was an aircraft assembly plant which utilized numerous hazardous chemicals in the manufacturing process (no manufacturing</p>	

processes were conducted at 2311 North Hollywood Way). According to information provided by the client, in March 1991, the City of Burbank approved the United States Environmental Protection Agency's (EPA) Consent Decree requiring a hundred million dollar plus groundwater cleanup in the Burbank area. This Consent Decree partially settled EPA's lawsuit against the City and Lockheed. Phase I of the construction of this EPA mandated cleanup was scheduled to be completed in 1995, in which the system had commenced operation, delivering a blended mixture of treated groundwater and water from the Metropolitan Water District to the City's water customers. In addition, EPA was to have the City of Burbank finalize a second Consent Decree to cover the operation and maintenance of this groundwater cleanup system to about the year 2018. Based on the current remedial activities being performed for this facility, this facility is not expected to have posed an adverse environmental impact to the subject site.

General Connectors Corporation	Facility ID# CAD981457906
3205 Burton Avenue	0.38 miles north
Burbank, CA	Operational Status Not Reported
According to VISTA, this facility was reported as a Federal CERCLIS List site. However, no detailed information was reported by VISTA concerning this facility. Based on the distance separating this facility from the subject site, this facility is not expected to have posed an adverse environmental impact to the subject site.	

Valley Enameling Corporation	Facility ID# CAD008495103
2509 Ontario Street	0.43 miles northeast
Burbank, CA	Operational Status Not Reported
According to VISTA, this facility was reported as a Federal CERCLIS List site. However, no detailed information was reported by VISTA concerning this facility. Based on the distance separating this facility from the subject site, this facility is not expected to have posed an adverse environmental impact to the subject site.	

Space-Lok, Inc.	Facility ID# CAD983580770
2526 Ontario Street	0.47 miles northeast
Burbank, CA	Operational Status Not Reported
According to VISTA, this facility was reported as a Federal CERCLIS List site. However, no detailed information was reported by VISTA concerning this facility. Based on the distance separating this facility from the subject site, this facility is not expected to have posed an adverse environmental impact to the subject site.	

Aluminum Dip Braze Company	Facility ID# CAD059233858
2537 North Ontario Street	0.48 miles northeast
Burbank, CA	Operational Status Not Reported
According to VISTA, this facility was reported as a Federal CERCLIS List site. Hazardous waste in the form of nitric acid, chromic acid and tank sludges was identified at this facility. No further remedial action is planned at this facility at this time. Based on the current status of this facility and distance separating this facility from the subject site, this facility is not expected to have posed an adverse environmental impact to the subject site.	

FEDERAL RCRA CORRACTS TSD FACILITIES LIST

The Corrective Action Report (CORRACTS) is a compilation of RCRA facilities undergoing corrective action. A corrective action order is issued pursuant to RCRA Section 3008(h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred. A total of one CORRACTS site was identified within one mile of the subject property. The subject property was not listed as a RCRA CORRACTS facility.

Alumtreat, Inc.	Facility ID# CAD009561911
2905 Winona	0.65 miles northeast
Burbank, CA	Operational Status Not Reported
According to VISTA, this facility receives off-site waste and is identified as a storage/treatment plant. No further corrective action is required at this time. Based on the current status of this facility and distance separating this facility from the subject site, this facility is not expected to have posed an adverse environmental impact to the subject site.	

FEDERAL RCRA GENERATORS LIST

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. A total of one RCRA generator was located on the subject or adjoining properties. The subject property was listed as a RCRA generator.

Lockheed Aeronautical Systems Company	Facility ID# CAD982504052
2311 North Hollywood Way	Former facility at subject site
Burbank, CA	Facility Closed
According to VISTA, 2311 North Hollywood Way was identified as a RCRA-Large Generator of hazardous waste. According to historical information provided by the client, the VISTA listing is pertaining to Building 76A, an automotive repair and fueling facility that was formerly located on the northeast corner of the subject site. Former operations at Building 76A included the disposal of waste motor oil from Lockheed fleet vehicles. Hazardous material usage and the generation of hazardous waste has reportedly not occurred at the building addressed at 2311 North Hollywood Way. Please refer to Section 2.3, Information Reported By User, for detained information pertaining to former operations at Building 76A, formerly located on the northeast corner of the subject site.	

STATE-EQUIVALENT NPL & CERCLIS HAZARDOUS WASTE SITES LIST

The California Hazardous Waste Sites List is a compilation of those sites that the State has received notification of a release of hazardous wastes, including NPL sites, CERCLIS sites, and non-Federally regulated hazardous waste release sites. A total of three State hazardous waste sites were identified within the AMSD. The subject property was not listed as a State hazardous waste site.

San Fernando Valley (Area 1)	Facility ID# CAD980894893
North Hollywood Wellfield Area	Subject site is located in impacted area
Los Angeles, CA	Operational Status Not Reported
The San Fernando Valley (Area 1) is also listed as a Federal NPL List site. Please refer to the Federal NPL List section for detailed information pertaining to this facility.	

Lockheed Martin Corporation	Facility ID# 19370189
2555 North Hollywood Way	0.23 miles north
Burbank, CA	Operational Status Not Reported
The Lockheed Martin Corporation is also listed as a Federal CERCLIS List site. Please refer to the Federal CERCLIS List section for detailed information pertaining to this facility.	

Lockheed Air Terminal	Facility ID# 19450006
2627 North Hollywood Way	0.31 miles north
Burbank, CA	Operational Status Not Reported
According to VISTA, the Lockheed Air Terminal is listed as an SCL List site. However, no detailed information was reported by VISTA concerning this facility. Based on the distance separating this facility from the subject site, this facility is not expected to have posed an adverse environmental impact to the subject site.	

STATE LEAKING UNDERGROUND STORAGE TANK (LUST) LIST

The California LUST list is a compilation of petroleum UST sites that have reported a release. A total of six LUST sites were identified within 0.5 mile of the subject property. The subject property was not listed as a LUST site.

Lockheed Martin Corporation	Facility ID# CAD008255283
2555 North Hollywood Way	0.23 miles north
Burbank, CA	Case Closed
According to VISTA, this facility has experienced an unauthorized release of solvents impacting soil and groundwater at this facility. According to the Regional Water Quality Control Board, the local agency and the Regional Board are in concurrence that no further work is required at this site. Based on the regulatory status, this facility is not anticipated to have an adverse environmental impact on the subject site at this time.	

Chevron USA Service Station #839	Facility ID# N/A
2650 North Hollywood Way	0.34 miles north
Burbank, CA	Case Closed
According to VISTA, this facility has experienced an unauthorized release of gasoline impacting soil and groundwater at this facility. According to the Regional Water Quality Control Board, the local agency and the Regional Board are in concurrence that no further work is required at this site. Based on the regulatory status, this facility is not anticipated to have an adverse environmental impact on the subject site at this time.	

TOSCO Service Station #1999	Facility ID# N/A
1976 Hollywood Way	0.38 miles south
Burbank, CA	No Action
<p>According to VISTA, this facility has experienced an unauthorized release of gasoline impacting soil. No remedial action as been conducted at this time. However, based on the media impacted (soil) and distance separating this facility from the subject site, this facility is not expected to have an adverse environmental impact on the subject site at this time.</p>	

Mobil Oil Service Station #11FD3	Facility ID# N/A
1951 North Hollywood Way	0.41 miles south
Burbank, CA	Further Site Assessment Underway
<p>According to VISTA, this facility has experienced an unauthorized release of gasoline impacting soil. Further site assessment activities are underway at this facility. Based on the distance separating this facility from the subject property, this facility is not expected to have an adverse environmental impact on the subject site at this time.</p>	

Mercury Air Services	Facility ID# CAD981457906
3205 Burton Avenue	0.38 miles north
Burbank, CA	Leak Being Confirmed
<p>According to VISTA, a leak is suspected at this facility, but has not been confirmed. However, based on the distance separating this facility from the subject property, this facility is not expected to have an adverse environmental impact on the subject site at this time.</p>	

ASII Tank Farm (Site #1)	Facility ID# N/A
2761 Hollywood Way	0.48 miles north
Burbank, CA	Remedial Action Underway
<p>According to VISTA, this facility has experienced an unauthorized release of jet fuel impacting soil. Remedial action is currently underway at this facility. Based on the distance separating this facility from the subject property, this facility is not expected to have an adverse environmental impact on the subject site at this time.</p>	

STATE REGISTERED UST LIST

The California UST list is a compilation of petroleum storage tank sites that are registered with the State. A total of one UST site was identified on the subject or adjoining properties. Registered storage tanks were listed on the subject property.

Lockheed Plane A-1 South	Facility ID# N/A
2311 North Hollywood Way	Formerly developed at subject site
Burbank, CA	USTs Removed
<p>According to VISTA, 2311 North Hollywood Way was identified as a UST facility. According to historical information provided by the client, the VISTA listing is pertaining to Building 76A, an automotive repair facility that was formerly located on the northeast corner of the subject site (no USTs are located at the building addressed at 2311 North Hollywood Way). A gasoline service station, reportedly operated by Unimart, was originally developed on the northeast portion of the subject site in approximately 1962. In the mid-1960's Lockheed Corporation acquired the gasoline</p>	

service station, identified as Building 76A, and converted the station into an auto service center for Lockheed fleet vehicles. As stated in Section 2.3, Information Reported By User, Building 76A was demolished and the USTs and clarifier were removed from the subject site in 1992. Soil in the close proximity of Building 76A was found to contain PCE, diesel fuel and hydraulic fluid/oil. From 1992 to 1995, a total of seven environmental investigations were performed at the former location of Building 76A. Impacted soil was removed from the subject property. In May 1995, no further environmental action was planned for the subject property and Lockheed Martin Corporation requested that closure of the environmental remediation for the subject site be granted by the California Regional Water Quality Control Board (CRWQCB). On July 5, 1995, a letter was submitted by the CRWQCB stating that no further remediation was required at the subject property. The contaminated areas of the subject property identified by previous site investigations had been remediated to the extent possible that would greatly reduce the threat to the groundwater beneath the site. Conformity soil samplings and testings had indicated that the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161 issued by the CRWQCB on December 10, 1987. As a result, the subject property was excluded from requirements set forth in Cleanup and Abatement Order No. 87-161. Based on the above, the former petroleum storage tank is not considered to represent a recognized environmental condition in connection with the subject property at this time.

6. RECONNAISSANCE FINDINGS

6.1 PROPERTY RECONNAISSANCE FINDINGS

A summary of uses and conditions consistent with ASTM Standard E 1527-97 § 8.4 indicating the likelihood of recognized environmental conditions in connection with the property is provided below. For each of the uses or conditions identified on the property, detailed information is discussed following the summary along with an opinion about the significance of the listing to the analysis of recognized environmental conditions in connection with the subject property.

HAZARDOUS SUBSTANCES IN CONNECTION WITH PROPERTY USE

To the extent observed or identified through interviews, the use, generation, treatment, storage or disposal of hazardous substances identified in connection with use of the property is described below.

According to VISTA, 2311 North Hollywood Way was identified as a RCRA-Large Generator of hazardous waste. According to historical information provided by the client, the VISTA listing is pertaining to Building 76A, an automotive repair facility that was formerly located on the northeast corner of the subject site. Former operations at Building 76A included the disposal of waste motor oil from Lockheed fleet vehicles. Hazardous material usage and the generation of hazardous waste has reportedly not occurred at the building addressed at 2311 North Hollywood Way. Please refer to Section 2.3,

Information Reported By User, for detained information pertaining to former operations at Building 76A, formerly located on the northeast corner of the subject site.

PETROLEUM PRODUCTS IN CONNECTION WITH PROPERTY USE/ABOVE OR UNDERGROUND STORAGE TANKS (ASTs/USTs)

To the extent observed or identified through interviews, the use, generation, treatment, storage or disposal of petroleum products and above or underground storage tanks identified in connection with use of the property is described below.

According to VISTA, 2311 North Hollywood Way was identified as a UST facility. According to historical information provided by the client, the VISTA listing is pertaining to Building 76A, an automotive repair facility that was formerly located on the northeast corner of the subject site (no USTs are located at the building addressed at 2311 North Hollywood Way). A gasoline service station, reportedly operated by Unimart, was originally developed on the northeast portion of the subject site in approximately 1962. In the mid-1960's Lockheed Corporation acquired the gasoline service station, identified as Building 76A, and converted the station into an auto service center for Lockheed fleet vehicles. As stated in Section 2.3, Information Reported By User, Building 76A was demolished and the USTs and clarifier were removed from the subject site in 1992. Soil in the close proximity of Building 76A was found to contain PCE, diesel fuel and hydraulic fluid/oil. From 1992 to 1995, a total of seven environmental investigations were performed at the former location of Building 76A. Impacted soil was removed from the subject property. In May 1995, no further environmental action was planned for the subject property and Lockheed Martin Corporation requested that closure of the environmental remediation for the subject site be granted by the California Regional Water Quality Control Board (CRWQCB). On July 5, 1995, a letter was submitted by the CRWQCB stating that no further remediation was required at the subject property. The contaminated areas of the subject property identified by previous site investigations had been remediated to the extent possible that would greatly reduce the threat to the groundwater beneath the site. Conformity soil samplings and testings had indicated that the subject property had been remediated in accordance with Cleanup and Abatement Order No. 87-161 issued by the CRWQCB on December 10, 1987. As a result, the subject property was excluded from requirements set forth in Cleanup and Abatement Order No. 87-161. Based on the above, the former petroleum storage tank is not considered to represent a recognized environmental condition in connection with the subject property at this time.

6.2 ADJOINING PROPERTY RECONNAISSANCE FINDINGS

A summary of uses and conditions identified on adjoining properties consistent with ASTM Standard E 1527-97 § 8.4 indicating the likelihood of recognized environmental conditions in connection with the subject property is provided below. For each of the uses or conditions identified on adjoining properties, detailed information is discussed following the summary along with an opinion about the significance of the listing to the analysis of recognized environmental conditions in connection with the subject property.

<input type="checkbox"/>	<input checked="" type="checkbox"/>	Wells
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Odors
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Other Uses Or Conditions Of Concern

No evidence of the above listed uses or conditions was identified on properties adjoining the subject site during the site reconnaissance.

7. ADDITIONAL SERVICES

Assessment was performed in connection with this Phase I ESA to address environmental issues beyond the scope of ASTM E 1527-97. For each additional service, a summary of the scope of work, methodology, and results is provided below.

7.1 LIMITED ASBESTOS SURVEY

INTRODUCTION

Asbestos-containing material (ACM) has been used extensively in buildings since the turn of the century, and most buildings have some ACM unless a significant effort has been made to remove all of it. As the adverse health effects of exposure to asbestos through inhalation and ingestion became known, the use and installation of many types of ACM in buildings was progressively phased out. For example, by 1979 the EPA had banned the use of sprayed-on ACM and troweled-on friable asbestos materials in building construction. There are instances, however, where ACM was used in new construction or renovations completed after the prohibitions were in place. Because of the costs associated with the control, removal and disposal of certain types of ACM, it can have a significant impact on the value of a property.

ACM is classified into three general forms, including thermal system insulation (e.g. pipe insulation, boiler insulation or duct insulation), surfacing materials (e.g. spray-on ceilings, spray-on walls or plaster) and miscellaneous forms (e.g. sheet flooring, ceiling tile, drywall, transite and similar products, or roofing materials). Material may be further classified as friable or non-friable, with the EPA having assigned two categories to the non-friable classification. Friability is a descriptive term referring to a materials propensity to crumble under hand pressure when dry. Materials may also be described based on their overall condition (e.g. good, fair, poor). Friable ACM is more likely to result in a release of asbestos fibers into the environment than non-friable materials, and therefore, is considered to present a greater hazard. Even non-friable ACM, however, has the potential to become friable and/or result in a release of asbestos fibers through accidental or intentional disturbance.

Asbestos-related activities are covered under a number of Federal laws and regulations. States may also establish regulations that are as effective as, or more stringent than, the Federal standards. Congress originally enacted the Asbestos Hazard Emergency Response Act (AHERA) in 1987 under Title II of the Toxic Substance Control Act (40 CFR 763) to regulate management of ACM in schools. AHERA was amended by the Asbestos School Hazard Abatement Reauthorization Act of 1989 (ASHARA) which placed accreditation requirements on persons performing assessment, design or response actions in public and commercial buildings. Standards for asbestos accreditation and training were developed by the EPA as the asbestos Model Accreditation Plan (40 CFR Part 763).

The National Emission Standards for Hazardous Air Pollutants (NESHAP) promulgated by the EPA under the Clean Air Act (40 CFR Part 61) address the identification of asbestos through laboratory analysis along with various aspects of management and control of ACM in residential buildings containing five or more dwelling units, commercial buildings and industrial buildings. In general, NESHAP requires building owners to inspect buildings for asbestos prior to renovation, remodeling or demolition. The Occupational Safety and Health Administration (OSHA) promulgated revised standards for occupational exposure to asbestos that became effective in 1995. The OSHA Asbestos Final Rule (29 CFR Parts 1910.1001 and 1926.1101) addresses hazard identification and work practices for asbestos-related activities. It also places requirements and responsibilities on both employers and building owners for maintenance of records, notifications, material identification and communication.

Suspect materials are building materials that are suspected of containing regulated concentrations of asbestos. Presumed asbestos-containing material (PACM), per the OSHA Asbestos Final Rule, includes all thermal system insulation, surfacing materials, and vinyl floor materials in buildings constructed prior to 1981, which otherwise have not been determined to be non-asbestos. AHERA, ASHARA and OSHA consider a material to be asbestos-containing if at least one sample of the material contains greater than 1% asbestos by volume. Under these rules, less than one percent is considered not detected, even if fibers were identified in the analysis; with a minimum of three samples from a homogeneous material required to confirm a material as non-asbestos. Under NESHAP, to determine a material is non-asbestos, any positive results with 10% or less asbestos must be verified utilizing the point count method. In general, all suspect materials should be assumed to contain asbestos until sufficient sampling and analysis has taken place to allow the material to be called non-asbestos. California defines ACM as any material that has greater than 0.1% asbestos by volume, which is more stringent than the EPA standard.

LIMITED ASBESTOS SURVEY SCOPE OF WORK AND METHODOLOGY

The limited asbestos survey was performed in accordance with the client's survey protocol. The scope of the survey included a visual inspection and bulk sampling and analysis. The asbestos survey performed in connection with this Phase I ESA was of a limited nature and was not intended to comply with the strict requirements of OSHA or the EPA. Roofing materials were not evaluated as part of this survey.

The asbestos survey was performed on October 12, 1998 by Mark E. Smith (AHERA Certification No. 349-54-9054) and included one building comprising approximately 5,000 total square feet. A visual inspection was conducted of the survey area to determine representative suspect materials and homogeneous areas which were visually similar in color, texture, general appearance, and that appeared to have been installed at the same time. Only materials that were accessible and/or exposed were inspected.

A total of three bulk samples were collected. Sampling was limited to those accessible materials not involving destruction of walls, other building elements, physical barriers, or the structural integrity of the item being tested. Sampling locations were chosen to be representative of homogeneous areas. Samples of materials were taken as randomly as possible while attempting to sample already damaged areas so as to minimize disturbance of the materials. Restoration of sampled surfaces was not within the scope of work. The bulk samples were submitted to PSI, Brea, California, for analysis by polarized light microscopy (PLM). The test results are summarized in the table provided below and the report of laboratory analysis is attached in Appendix G.

LIMITED ASBESTOS SURVEY RESULTS

The area surveyed was reported to include buildings constructed prior to January 1, 1981.

The following table summarizes the suspect materials and their general locations identified pursuant to the scope of services along with sample identification numbers and laboratory analytical results.

SP. NO.	MATERIAL DESCRIPTION	SAMPLE LOCATION	LABORATORY ANALYTICAL RESULTS	
			%	ASBESTOS TYPE
059743	2' X 4' drop-in ceiling tile	office, SE portion of building	ND	N/A
059744	2' X 4' drop-in ceiling tile	office, SE portion of building	ND	N/A
059745	2' X 4' drop-in ceiling tile	office, SE portion of building	ND	N/A

As indicated in the above table, this limited asbestos survey did identify asbestos-containing materials at or above regulated levels in connection with the area surveyed pursuant to the scope of this assessment.

8. SUMMARY AND CONCLUSIONS

8.1 PHASE I ENVIRONMENTAL SITE ASSESSMENT

PSI has performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of the ASTM Standard E 1527-97 protocol of Burbank Retail Building in Burbank, California. Exceptions to or deletions from this protocol are discussed earlier in this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

8.2 OTHER ENVIRONMENTAL ISSUES

ASBESTOS

The limited asbestos survey conducted pursuant to the scope of this assessment did identify the presence of asbestos-containing materials (ACM) at or above regulated levels in connection with the area surveyed.

9. RECOMMENDATIONS

Based on investigation of the property for evidence of recognized environmental conditions and other environmental issues, PSI offers the following recommendations.

- No further assessment of recognized environmental conditions appears warranted.

10. WARRANTY

PHASE I ENVIRONMENTAL SITE ASSESSMENT

PSI warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the ASTM Standard E 1527-97 protocol. These methodologies are described by the standard as representing good commercial and customary practice for conducting an Environmental Site Assessment of a parcel of property for the purpose of identifying recognized environmental conditions. However, these findings and conclusions contain all of the limitations inherent in these methodologies which are referred to in the protocol and some of which are more specifically set forth below.

LIMITED ASBESTOS SURVEY

The field and laboratory results reported herein were used to evaluate the presence of accessible and/or exposed suspect asbestos-containing building materials in the surveyed area. Professional Service Industries, Inc. warrants that the findings contained herein have been prepared in general accordance with accepted professional practices at the time of its preparation as applied by similar professionals in the community. Changes in the state of the art or in applicable regulations cannot be anticipated and have not been addressed in this report.

The survey and analytical methods have been used to provide the client with information regarding the presence of accessible and/or exposed suspect asbestos-containing building material existing in the surveyed area at the time of inspection.

Test results are valid only for the material tested. There is a distinct possibility that conditions may exist that could not be identified within the scope of the survey or that were not apparent during the site visit. This inspection covered only those areas that were exposed and/or physically accessible to the inspector. The study is also limited to the information available from the client at the time it was conducted.

UNIDENTIFIABLE CONDITIONS

There is a possibility that even with proper application of these methodologies, conditions may exist on the property that could not be identified within the scope of the assessment or that were not reasonably identifiable from the available information. PSI believes that the information obtained from the records review and the interviews concerning the property is reliable. However, PSI cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The methodologies of this assessment are not intended to produce all inclusive or comprehensive results, but rather to provide the client with information regarding apparent suspicions of existing and potential adverse environmental conditions relating to the subject property.

No other warranties are implied or expressed.

SECTION 1.0

INTRODUCTION

This report describes the results of the soil gas survey performed at Lockheed Plant A-1 South from September 23 to October 15, 1993. The survey was performed by A.E. Schmidt Environmental and Interphase under subcontract to ASL Consulting Engineers.

The survey consisted of collecting a total of 181 soil gas samples at specified grid spacing intervals across the plant. The sample locations were selected to further evaluate specific areas of the plant which had been identified in previous investigations as possible sources of chemicals in the subsurface. In addition, samples were collected on a 100-foot grid spacing throughout the plant to determine if any previously undiscovered areas of elevated concentrations of chemicals existed. Section 2.0 of this report summarizes the site background and the results of previous investigations performed at the plant as context for the soil gas survey results.

The soil gas samples were analyzed on-site in the Interphase mobile laboratory following California Regional Water Quality Control Board (CRWQCB) protocols for soil gas analyses. A description of the soil gas survey is included in Section 3.0 and the methodology used to collect and analyze the samples is described in the workplan included in Appendix A. Chemicals detected in the soil gas are identified in Section 4.0 and their distribution at the plant is also presented. Section 5.0 discusses these results and provides recommendations for further action at the site.

2.1 Site History

Lockheed Plant A-1 South is a 19.6 acre site in the City of Burbank bounded by Hollywood Way on the east, Vanowen Street on the north, and Valhalla Avenue on the south (Figure 2-1). The property was used for agricultural purposes and as a dairy farm until the 1940s, at which time Lockheed began using portions of the property to support their Burbank manufacturing facilities. From the 1940s through the 1960s the land had various uses including parking for Lockheed employees, small restaurants bordering Vanowen Street, and an auto salvage yard.

Three buildings were constructed on the property in 1962 and initially housed a Unimart store and associated auto service center (Buildings 76 and 76A) and a hospital supply store (Building 81). In 1969, Lockheed purchased Building 81 and the surrounding parking lot and also began leasing Buildings 76 and 76A. In 1986 Lockheed purchased the remaining property. The plant was deactivated during the 1991-1992 time period and in 1992 Building 76A was demolished. Buildings 76 and 81 are currently still standing at the site but are unoccupied.

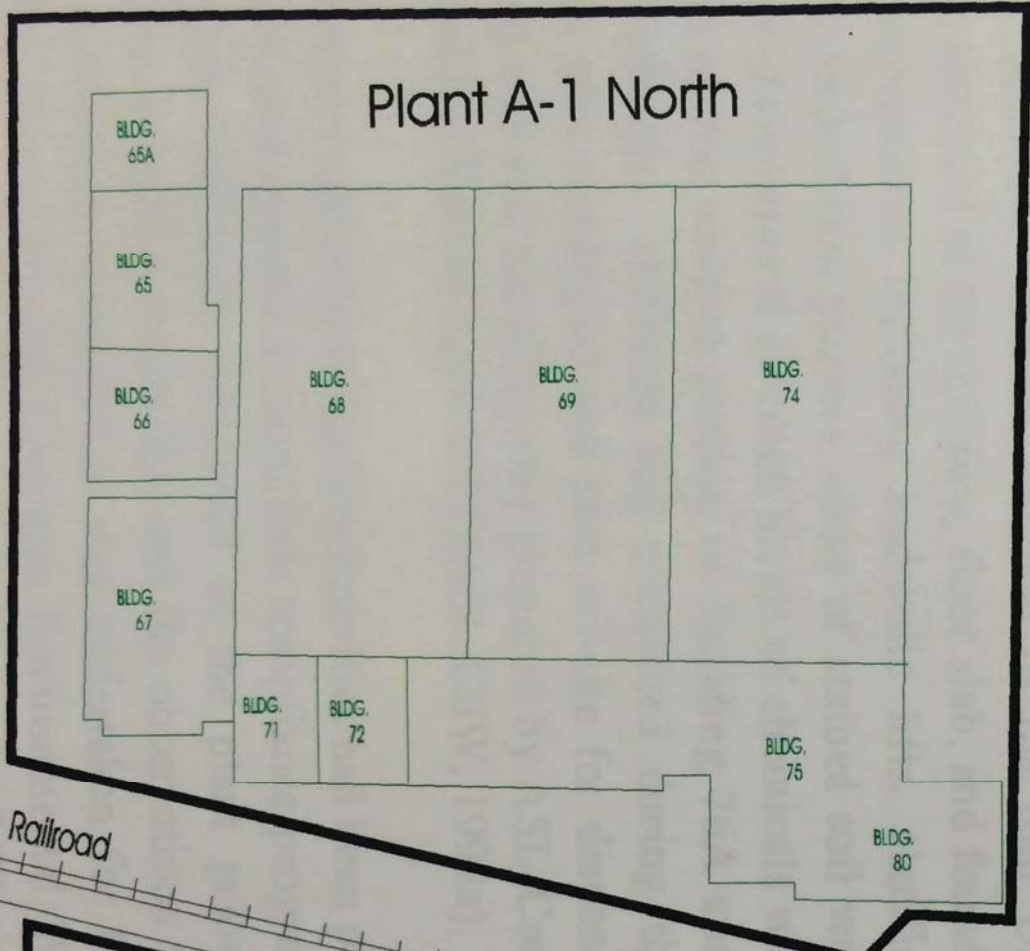

Buildings 76 and 81 were used by Lockheed primarily as administrative office space and for support functions such as security, procurement, personnel, etc. Building 81 housed some material testing facilities for a brief time, but, generally, no significant manufacturing or production activities took place at Plant A-1 South.

Building 76A, the auto service center, was used by Lockheed for fleet vehicle maintenance and fueling. This complex included underground fuel storage tanks (USTs), dispenser islands and piping, below-grade hydraulic lifts, clarifiers, and above ground storage areas for hazardous materials. In addition, one of the underground storage tanks was used to store the degreasing solvent, tetrachloroethene (PCE), and served as a central supply point for Lockheed's other plants in Burbank. The PCE was dispensed to tanker trucks and transported to the various other Burbank plants, as needed.

2.2 Previous Investigations

The first investigations performed by Lockheed at Plant A-1 South were for the purpose of bringing the USTs at Building 76A into regulatory compliance. Several small investigations were performed between 1984 and 1989 which involved tank and piping testing, soil sampling, vapor monitoring well installations, and soil gas surveys (Gregg and Associates, 1985; ENSR, 1989-90; URS, 1988). These investigations were limited

Plant A-1 North

S.P. Railroad

Vanowen Street

Plant A-1 South

Valhalla Dr.

N. Hollywood Way

in scope to the area directly around the tanks and associated piping and dispensers. Some evidence of fuel hydrocarbon and VOC releases was found during these investigations and minor amounts of affected soil were excavated and sent off-site for disposal during retrofitting of tanks and piping to achieve regulatory compliance.

In 1991, Lockheed contracted McLaren/Hart to complete a Phase I Environmental Assessment (EA) of Plant A-1 South. This process involved a review of historical operating practices at the plant, interviews with employees, a site inspection, and aerial photo review. The purpose of the EA was to identify possible areas of environmental concern which might require further investigation. The EA report was submitted by McLaren/Hart in January, 1992 (McLaren/Hart, 1992).

The EA identified several areas of the plant, primarily in and around Building 76A, which may have been sources of elevated chemicals in the subsurface. The features in Building 76A such as underground tanks, piping, hydraulic lifts, clarifiers, etc. were all identified as potential sources. In addition, review of historical operating practices revealed that surface spills of fuels and PCE had occasionally occurred at the dispensing islands and in an area near the eastern perimeter fence where a temporary above ground PCE holding tank had been located. These areas were targeted for further subsurface investigation.

During February-April 1992, the demolition of Building 76A was undertaken. The demolition activities included removal of the four USTs and associated piping and dispensers; removal of the building, floor slab, and foundations; and removal of all below grade improvements including hydraulic lifts, clarifiers, storm drains, and sewers. During the demolition process, areas of stained soil were noted and soil samples were collected to determine if elevated levels of chemicals were present. Shallow stained soil was found in the western portion of Building 76A and around the USTs, piping, and dispenser islands. Affected soil excavated during the UST removals and building demolition was stockpiled and sent off-site for disposal. A report on the demolition monitoring and soil sampling was prepared by ASL Consulting Engineers and Converse Environmental West in April 1992 (ASL/CEW, 1992a).

Although some minor investigation activities had been performed prior to 1992 as part of Lockheed's underground storage tank compliance program, no comprehensive subsurface investigation had been completed at the plant prior to that date. Based on the information compiled in the EA and the observations from the demolition of Building 76A, a subsurface investigation was undertaken for Lockheed in June 1992 by ASL Consulting Engineers and Converse Environmental West (ASL/CEW, 1992b). This investigation consisted of completing a total of 78 soil borings near various features across the plant which had been identified as possible release sources. Fifty-eight of the 78 borings were concentrated in the area of Building 76A, the former fleet vehicle

SOIL GAS ISO-CONC
Air PCE @ 51

Max. Soil Gas Concentration
DF PCE, 1,1-DCE, TCE

maintenance and refueling facility. Figures 2-2 and 2-3 show the locations of soil borings completed during the 1992 investigation in relation to the soil gas sample collection points which were part of this current investigation.

Sixty-three of the soil borings completed in 1992 were completed to depths of 10 or 20 feet. Fourteen borings were completed to a total depth of 40 feet and one boring was completed to a depth of 80 feet. A total of 344 soil samples were collected from the 78 borings.

Soil samples were analyzed for metals and PCBs, petroleum hydrocarbons (TPH), and for volatile organic compounds (VOCs). The principal chemicals identified in the soil samples were diesel fuel, oil, and PCE. TPH (fuels and oils) was generally confined to the shallow subsurface at depth of 10 feet or less and was found almost exclusively in the area around Building 76A. Only one boring, B76A-46, showed significant levels of TPH at depths greater than 10 feet. In this boring, located at one of the dispenser islands, petroleum hydrocarbons were found at depths up to 25 feet.

Likewise, elevated VOC concentrations were generally limited to the shallow subsurface in the portion of Building 76A which included the underground storage tanks and the piping and dispensing systems. Boring 76A-46 contained the highest concentrations of VOCs, which were detected at this location to a depth of 25 feet. The areas of the plant which contained elevated levels of VOCs generally conformed with the areas where product dispensing, storage, and surface spills had occurred.

Following completion of the subsurface soil investigation and the demolition of Building 76A, Lockheed was requested by the CRWQCB to complete a soil gas survey at the plant to ensure that no source areas had escaped detection during the previous investigations and to confirm the results of those investigations. This report documents the results of the soil gas survey undertaken to fulfill this requirement.

SECTION 3.0 SOIL GAS SURVEY DESCRIPTION

The workplan for this soil gas survey was completed by ASL Consulting Engineers and Converse Environmental West in August 1993 (Appendix A). The workplan was submitted for review to the CRWQCB and approval to implement the plan was received from the CRWQCB in a letter dated September 15, 1993 (Appendix B). Field sample collection began on September 23, 1993 and was completed on October 15, 1993.

A total of 181 soil gas samples were collected at 159 sampling locations as part of this investigation. Initially, samples were collected at a depth of 5 feet from the 158 points identified in the workplan and shown on Figures 2-2 and 2-3. This sampling was performed during the period from September 23 through October 7, 1993.

In areas where chemicals were known or suspected in the soil, primarily in the Building 76A area, a grid spacing of 20 feet was used. In the remaining areas of the plant, a grid spacing of 100 feet was employed. A total of 109 soil gas samples were collected in the Building 76A area of the plant, including 89 samples at a depth of 5 feet and 20 samples at depths from 10-25 feet. Twenty foot grid spacing samples were also collected in the area of the former auto salvage yard, located in the north-central portion of the plant. Five samples at a depth of 5 feet were collected in this area (samples SG-12, SG-67 through SG-70).

The data collected at depths of 5 feet during the initial sampling round were reviewed by Lockheed representatives and the CRWQCB and points were identified at which soil gas samples were desired at deeper depths or at additional locations. A second round of sampling was performed on October 13-15, 1993, following agreement on the scope of work between Lockheed and the CRWQCB in a meeting held October 12, 1993. Table 3-1 shows the points which were selected for additional sampling, sampling depths, and rationale for selection.

Sampling depths for the second round of samples were generally selected at 20 feet to evaluate whether chemicals found in the subsurface, which had been identified in borings and shallow soil gas samples, had migrated vertically to any substantial depth. Samples in the vicinity of the former USTs were collected at a depth of 25 feet to ensure that samples were collected in native soil beneath the imported backfill material which was placed at depths of up to 15-20 feet following removal of the tanks. A few samples were collected at 10 foot depths at the request of the CRWQCB.

Soil gas samples were collected and analyzed by the methodology described in the approved workplan (Appendix A). Daily instrument calibrations and quality control

checks were performed prior to beginning sample collection and following collection of the last sample each day. The data were tabulated and plotted on a daily basis to track progress and to identify any anomalies or possible problems. Several field meetings were held with CRWQCB representative, Mr. Alex Carlos, during the duration of the survey to ensure that data collection and analysis procedures conformed with CRWQCB protocol and that data quality were adequate. Field data collection proceeded smoothly throughout the survey duration and no unusual problems were encountered. In all cases, target sample depths were achieved and acceptable samples were collected at all planned sample locations.

TABLE 3-1
Sampling Locations and Rationale for Round 2 Soil Gas Samples

Location	Depth	Description
SG-4	10'	Elevated VOC concentrations found in 5' soil gas samples.
SG-12	10'	Area of former auto salvage yard
SG-79	20'	Former clarifier location
SG-82	20'	Former clarifier location
SG-83	10', 20'	Area of former below-grade hydraulic lifts
SG-84	20'	"
SG-91	20'	"
SG-92	20'	PCE found in soil samples from boring 76A-41.
SG-93	20'	PCE found in soil samples from boring 76A-42.
SG-102	20'	Elevated VOC concentrations found in 5' soil gas sample.
SG-105	20'	Former dispenser location near boring 76A-46. Elevated VOCs in soil samples to depth of 25'. Elevated VOCs in 5' soil gas sample.
SG-111	25'	Area of piping from former USTs to dispensing islands
SG-114	20'	Dispenser location with highest PCE concentration in 5' soil gas sample
SG-115	20'	Former dispenser location; elevated VOCs in 5' soil gas sample
SG-124	25'	Area of former USTs

SECTION 4.0

SOIL GAS SURVEY RESULTS

4.1 Data Validation

The quality control data provided by the mobile laboratory were reviewed to ensure that calibrations and quality control checks were performed as required on a daily basis and that the results of the QC checks were within the criteria stipulated by the RWQCB. The quality control checks performed by the laboratory included a daily 1-point GC calibration, daily pre- and post-analysis QC checks, daily pre- and post-analysis syringe/system blanks, daily pre- and post-analysis ambient air blanks, and duplicate analyses. Table 4-1 summarizes the quality control data for the soil gas survey.

TABLE 4-1
Summary of Quality Control Data

Date	1 Point Calibration		QC Check (% recovery)		Syringe/System Blank	
	# of Comp.	% diff.	AM	PM	AM	PM

10-7-93	12	0-11	82-121	82-109	ND	ND
10-13-93	16	0-14	89-118	82-120	ND	ND
10-14-93	11	1-13	82-101	85-115	ND	ND
10-15-93	12	0-13	80-120	80-118	ND	ND

of Comp.: The number of compounds used for the daily 1-point calibration. RWQCB requirement is for a minimum of 9 compounds; 6 chlorinated and 3 aromatics.

% diff.: The range of % differences of the instrument response factors, computed from the daily 1-point calibration, from the mean response factors computed from the initial, or 5-point, calibration. RWQCB requirement is that the daily 1-point calibration be within 15% of the mean.

QC Check (% recovery): The observed recovery of compounds from a standard, expressed as a percentage of their known concentrations. RWQCB requirement is recovery within $\pm 20\%$ of the known concentration.

ND: No compounds detected in the blank.

Ambient air samples were also collected each day before beginning any soil gas data collection and at the end of each day after completion of analysis of the last soil gas sample. Compounds which were detected in ambient air samples include Trichlorofluoromethane (FCC-11), 1,1,1-Trichloroethane (1,1,1-TCA), and Tetrachloroethene (PCE). FCC-11 was found in 27 of 28 ambient air samples at concentrations ranging from 0.002 - 0.008 ug/l. 1,1,1-TCA was detected in 18 of 28 ambient air samples at concentrations ranging from 0.004 - 0.085 ug/l. PCE was detected in 22 of 28 ambient air samples at concentrations ranging from 0.002 - 0.02 ug/l. Similar concentrations of these compounds found in shallow soil gas samples may be partially due to diffusion from the atmosphere and may not be indicative of the presence of chemicals in the subsurface.

Duplicate analyses were performed on 10 of the 181 samples. Table 4-2 shows the results of the analyses performed on duplicate samples and demonstrates that repeatable results were obtained during the duration of the soil gas survey.

The results of the quality control data review indicate that quality control procedures were followed properly by Interphase. The required quality control checks were performed daily and the results were within the criteria specified by the RWQCB. Therefore, the data are considered acceptable and no data have been rejected based on a lack of adequate quality control in the mobile laboratory.

4.2 Chemicals Detected in Soil Gas at Plant A-1 South

Soil gas samples were analyzed for the standard list of 22 chlorinated and aromatic compounds required by the RWQCB for all soil gas surveys. Four additional compounds were also added to the list including total volatile hydrocarbons (TVH), acetone, methyl ethyl ketone (MEK), and methyl isobutyl ketone (MIBK). These compounds were added for Plant A-1 South because they had been previously detected in soil samples at the plant or because of their historical use by Lockheed.

Only seven chemicals were detected in the 181 soil gas samples collected during this soil gas survey. Tables 4-3 and 4-4 show the chemicals which were detected in the samples from the five foot depth and in the deeper samples collected at depths of 10-25 feet. Copies of the analytical report from Interphase are included in Appendix C.

PCE was the most commonly detected chemical and was also detected at the highest concentrations. PCE was detected in 179 of the 181 samples analyzed with a maximum concentration of 2200 ug/l. The second most commonly detected chemical was 1,1-Dichloroethene (1,1-DCE). 1,1-DCE was detected in 125 of the 181 samples at a maximum concentration of 14.4 ug/l. TCE was detected in 93 of the 181 samples with a maximum concentration of 280 ug/l. The distribution of these chemicals in soil gas samples from the plant is discussed in Section 4.3.

1,1,1-TCA and CFC-11 were also detected in a large percentage of the samples. However, the average concentrations detected were substantially lower than for PCE, TCE, or 1,1-DCE, and their presence in the soil gas at low concentrations may be partially attributable to their presence in ambient air in this area.

The only other chemicals detected were carbon tetrachloride and vinyl chloride. Carbon tetrachloride was detected in a total of 4 samples and vinyl chloride was detected in a total of 2 samples. The maximum concentration of carbon tetrachloride was 0.011 ug/l and it was found only along the northwestern boundary of the plant (SG-2, SG-3, and SG-4). Vinyl chloride was detected at concentrations of 2.3 ug/l and 1.9 ug/l in two of the 25 foot samples collected in the area of the former underground storage tanks near Building 76A (SG-124 and SG-138).

4.3 Distribution of Chemicals Detected in Soil Gas at Plant A-1 South

Elevated concentrations of the chemicals detected in soil gas at the plant, including principally PCE, TCE, and 1,1-DCE, were identified primarily in the northeastern portion of the plant. As discussed in Section 2.0, this area of the plant was formerly occupied by a vehicle maintenance, fueling, and bulk PCE handling facility (Building 76A) which included underground storage tanks, piping, dispensers, clarifiers, and hydraulic lifts. The previous site investigation at the plant had identified this area as having elevated levels of TPH and VOCs in the shallow soil samples.

The highest concentrations of PCE and TCE were detected in the soil gas samples in the vicinity of the former dispenser islands and in the area directly south of the islands. This area was identified in the Plant A-1 South EA as an area where several PCE surface spills reportedly occurred in the 1970s and 1980s during product transfer operations from the underground storage tanks to the tanker trucks used to distribute PCE to the Burbank facilities.

Table 4-5 summarizes the soil gas data for each 5 foot depth soil gas point. Table 4-6 summarizes the data for soil gas samples collected at depths of 10-25 feet. Figures 4-1 through 4-8 show the concentrations for PCE, TCE, 1,1,1-TCA and 1,1-DCE across the plant. The distribution of total VOCs in soil gas at the plant is shown on Plate 1.

SECTION 5.0 DISCUSSION AND RECOMMENDATIONS

This soil gas survey has provided further assessment of several areas of Plant A-1 South which were identified in the EA or in the previous subsurface soil investigation as possible sources of elevated concentrations of chemicals in the subsurface. In addition, this soil gas survey has provided a comprehensive plant-wide assessment to determine if additional sources or areas of elevated chemical concentrations might exist which had not been previously discovered.

5.1 Discussion of Results by Area

Specific areas of the plant where elevated levels of chemicals were suspected and which were addressed by this soil gas survey include the following:

- Former auto salvage yard in the north-central portion of the plant in the vicinity of soil gas points SG-12, and SG-67 through SG-70,
- Former clarifiers in the western portion of Building 76A (SG-79 and SG-82),
- An above ground hazardous materials storage area in the western portion of Building 76A (SG-83),
- Former hydraulic lifts inside Building 76A (SG-84, SG-91, and SG-92),
- Former underground storage tanks, piping, and dispenser islands around Building 76A,
- Two possible PCE surface spill areas; one south of the dispensing islands and one along the eastern property boundary,
- A former vehicle storage area located south of Building 76A and west of the former USTs (SG-119 through SG-122, SG-133 through SG-136).

Auto Salvage Yard

Data for the area of the former auto salvage yard consisted of samples from five soil gas points at a depth of five feet (SG-12, SG-67,68,69,70) and from one point at a depth of 10 feet (SG-12). Data distributions for the chemicals of concern, shown on Figures 4-1, 4-3, 4-5, and Plate 1, indicate that the only compounds detected above 1 ug/l at this

location were PCE and 1,1-DCE. PCE was detected at a concentration of 1.1 ug/l (SG-68) and 5.8 ug/l in the 5-foot sample from SG-12. All other PCE concentrations were less than 1 ug/l. 1,1-DCE was detected at concentrations ranging from 1.5-2.7 ug/l in four of the 6 samples from this location. No other chemicals were detected at concentrations exceeding 1 ug/l. The single sample collected at a depth of 10 feet (SG-12) contained only 1,1-DCE at a concentration exceeding 1 ug/l.

Western Portion of Building 76A (Clarifiers, Hydraulic Lifts, Storage Areas)

Data from the western portion of Building 76A included 19 sampling locations at a depth of 5 feet, one sample location at a depth of 10 feet (SG-83), and five samples from a depth of 20 feet. Compounds detected in this area include 1,1-DCE, PCE, and TCE (Figures 4-2, 4-4, 4-6, 4-8, and Plate 1). PCE was detected in all of the samples, with a maximum concentration in the five foot samples of 8.5 ug/l (SG-80) and a maximum concentration in the 20-foot samples of 10 ug/l (SG-84). 1,1-DCE was detected in most of the samples in this area at relatively uniform concentrations ranging from 1.3-6.1 ug/l. TCE was detected in approximately one-half of the samples at a maximum concentration of 1.3 ug/l.

Horizontal gradients, which might serve to pinpoint a specific source, were not readily discernible in this area for any of these chemicals. Likewise, no significant vertical gradients could be identified when comparing the data at the 5-foot depth and the 20-foot depth. Table 5-1 shows the comparison of VOC concentrations between the 5-foot samples and the 20-foot samples.

TABLE 5-1
Data Comparison Between 5' and 20' Samples, Western Portion of Building 76A
 (concentrations in ug/l)

Point	PCE (5')	PCE (20')	TCE (5')	TCE (20')	DCE (5')	DCE (20')
SG-79	3.0	3.1	0.25	0.26	ND	ND
SG-82	0.68	0.84	ND	ND	4.2	1.3
SG-83	5.7	5.9	0.14	0.16	2.1	ND
SG-84	8.3	10	1.3	0.92	3.8	2.4
SG-91	0.94	2.3	0.072	0.1	4.1	ND

USTs, Dispenser Islands, and Surface Spill Area

The portion of Building 76A which included the former USTs, dispensing islands, and the reported surface spill area south of the islands contained the highest concentrations of

PCE and TCE reported during the soil gas survey. Concentrations of PCE in this area generally exceeded 10 ug/l, with an area of concentrations greater than 100 ug/l centered on the dispenser islands and the area south of the islands. The area directly around the location of the former USTs showed the lowest PCE and TCE concentrations in this area, probably due to the excavation of soil and replacement with backfill which had occurred during removal of the tanks. 1,1-DCE was also detected in this area of the plant, again at relatively uniform concentrations of 2.0-7.0 ug/l at the 5-foot depths.

Deeper soil gas samples, at depths of 20-25 feet, were collected at 11 sample points in this area. Table 5-2 shows the comparison of data between the 5-foot samples and the 20-25 foot samples at these 11 locations.

TABLE 5-2
Data Comparison Between 5' and 20-25' Samples, USTs/Dispensers Area
 (concentrations in ug/l)

Point	PCE (5')	PCE (20-25')	TCE (5')	TCE (20-25')	DCE (5')	DCE (20-25')
SG-102	90	6.3	6.7	1.6	ND	12
SG-105	250	190	57	280	ND	2.3
SG-111	7.1	54	ND	11	3.4	2
SG-114	2200	0.54	0.1	2	2.7	14.4
SG-115	110	0.19	ND	1.1	ND	2.6
SG-124	8.3	16	ND	1.6	7.0	3.1
SG-125	37	57	ND	5.2	6.0	2.7
SG-127	500	140	8.8	9.2	2.2	2
SG-138	22	18	ND	ND	2.9	2.3
SG-150	100	3.8	2.2	0.23	2.5	ND
SG-158	54	6.2	0.69	0.53	2.2	1.3

PCE concentrations generally decreased with depth although concentrations greater than 100 ug/l were still found at two of the deep sampling locations. Increases in PCE concentrations occurred at only two locations, SG-124 and SG-125. These samples were collected at depths of 25 feet in the area of the former USTs. These data most likely represent a slight increase in concentrations between the backfill material in the tank excavation cavity and the native soil beneath.

Both TCE and 1,1-DCE concentrations showed a slight increase with depth at several of the sample locations. However, the differences were generally minor and do not appear to indicate a significant vertical gradient, with the possible exception of TCE at SG-105. This point was located directly beneath one of the former dispensers and is also located in the area where the highest PCE concentrations were detected.

Eastern Boundary Surface PCE Spill Area

Seven soil gas samples at six locations were collected along the eastern perimeter boundary of the plant in the area where a former above ground PCE holding tank had been temporarily located. The tank had been placed at this location for a brief period due to reported product contamination problems in the main underground supply tank. Reportedly, surface spills may have occurred in this area during product transfer operations.

Six soil gas samples at a depth of 5 feet and one sample at a depth of 20 feet were collected in this area at points SG-117, 118, 131, 132, 145, and 146. PCE was detected in all samples with concentrations ranging from 15-31 ug/l in the 5-foot samples and 1.1 ug/l in the single 20-foot sample (SG-146). 1,1-DCE was detected in four of the seven samples at uniform concentrations ranging from 2.7-3.2 ug/l. TCE was detected in one sample at a concentration of 0.14 ug/l and 1,1,1-TCA was detected in one sample at a concentration of 2.4 ug/l.

Vehicle Storage Area

Eight 5-foot soil gas samples were collected in the former vehicle storage area located south of Building 76A and west of the former USTs. No samples were collected in this area at depths greater than 5 feet. PCE was again the most significant chemical detected in this area, with concentrations ranging from 3.3-15 ug/l. PCE was detected at all eight sampling locations. 1,1-DCE was detected at six of the eight locations with uniform concentrations ranging from 2.8-4.4 ug/l. TCE was detected at only one location (SG-122) at a concentration of 0.41 ug/l.

5.2 Recommendations

These data suggest that most of the areas of the plant investigated during this soil gas survey do not contain significantly elevated levels of chemicals in the soil gas (i.e., >10 ug/l). Areas where chemical concentrations exceeded this nominal level were located exclusively in the northeastern portion of the plant, around Building 76A. Elevated levels of chemicals were not found outside the Building 76A area, which is consistent with the findings of the previous subsurface investigations at the plant.

In the former dispenser/surface spill area of Building 76A, where the most significant concentrations of chemicals were encountered, the vertical extent of PCE/TCE in the soil gas has not been fully determined. A focused Feasibility Study/Remedial Action Plan will be prepared by Lockheed to address the vertical distribution of chemicals in the vapor phase. The FS/RAP will address remedial alternatives that may be utilized to remediate the vadose zone soils in and around the former Building 76A area.

Telephone: (818) 835-7000

1.0 INTRODUCTION

Lockheed Martin Corporation [formerly, Lockheed Environmental Systems and Technologies Company (LESAT), Burbank Program Office] prepared this Final Report of Soil Remediation to document the final phase of investigation and the subsequent soil remediation for Plant A1 South. The remediation consisted of the excavation and disposal of soil containing Tetrachloroethene (PCE), diesel fuel, and oil or hydraulic fluid from the Building 76A area. The excavation, transport and disposal of soil was completed in May, 1995, under the observation and direction of the California Regional Water Quality Control Board (CRWQCB) and in accordance with the Plant A1 South Soil Remediation Workplan prepared by LESAT (January 1995).

The remediation of the shallow soil in the Plant A1 South, Building 76A area was required by the CRWQCB. Plant A1 South is located at the southwest corner of Hollywood Way and Vanowen Street in Burbank, California. Figure 1 presents a vicinity map and schematic diagram of the A1 complex which includes Plant A1 North, A1 East and A1 South. Figure 2 presents a plot plan of the Plant A1 South facility. Plant A1 South includes buildings 76 and 81, parking lots 11, 11A, 12 and 20, and the former Building 76A. Plant A1 South was decommissioned in the first quarter of 1992. All operating equipment and personnel were removed in 1992.

Building 76A and all underground structures were removed from the site during site demolition in 1992. PCE affected soil was detected at Building 76A in the former Underground Storage Tank (USTs) area. The locations of the USTs are shown on Figure 3. The affected areas were discovered and characterized by the Environmental Assessment (McLaren, 1992), the completion of soil borings in the vicinity of the former Building 76A (ASL Consulting Engineers, 1992), by the completion of a soil vapor survey (ASL Consulting Engineers, 1993) and the Soil Characterization Field Study (contained in this report).

1.1.0 Purpose and Objectives

The soil remediation of the Building 76A area was performed to remove the affected soil and reduce the possibility of surface exposure or impact to the groundwater. The soil remediation consisted of excavating the affected soil and transporting the soil to an appropriate disposal site. Lockheed Martin Corporation prepared this report for submittal to the Los Angeles Region of the CRWQCB to document the results of the soil remediation.

SECTION 2.0

SECTION 3.0

SECTION 4.0

ITEMS OF EXCAVATION

(Investigation: soil samples were analyzed for metals)

2.0 FACILITY BACKGROUND

The Lockheed Martin Corporation Plant A-1 South parcel is rectangular in shape and consists of a 19.6 acres. The parcel is bounded by Hollywood Way on the east, Vanowen Street on the north, Valhalla Avenue on the south and a cemetery on the west (see Figure 1). The parcel was used for agricultural purposes and as a dairy farm until the 1940s, at which time Lockheed began using portions of the property to support their Burbank aircraft manufacturing facilities.

From the 1940s through the 1960s the land had various uses including parking for Lockheed employees, small restaurants bordering Vanowen Street, and an auto salvage yard. Building 76 and Building 76A were constructed as portions of a Unimart retail sales facility in the 1960s. Building 76A was used as a gasoline service station for the Unimart facility until Lockheed began using Building 76 and Building 76A. Lockheed used the buildings through the 1970s, 1980s and up to 1992 for procurement offices. The western 40 percent of the parcel has since been sold to others (see Figure 2).

2.1.0 Site Description

Asphalt or concrete paving covers approximately 75 percent of the parcel surface. An additional 17 percent is covered by Building 76 and Building 81(owned by others). The remaining eight percent of the parcel was occupied by Building 76A and the associated parking area (see Figure 2). The entire site, including Buildings 76, 81 and parking lots 11, 11A, 12, 20 and the Building 76A area are enclosed by a chain-link fence. Lockheed presently owns the eastern 60 percent of the site. Access to the Lockheed owned portion of the parcel is limited to authorized personnel.

The north-eastern corner of Plant A1 South which includes the location of the former building 76A and the surrounding area was the focus of this remediation (see Figure 2 and Figure 3). The former Building 76A site area is not surfaced at this time. A soil sealer is applied periodically to control weed growth and dust. The site surface has a slight gradient towards the southwest. A groundwater monitoring well (A1 CW-9) and a storm drain are present in the north-eastern corner of the site near the intersection of Vanowen Street and Hollywood Way, as shown on Figure 3.

2.1.1 Building 76A

Building 76A was operated as a auto service center and was used by Lockheed for fleet vehicle maintenance and fueling. This facility included USTs, dispenser islands and piping, below-grade hydraulic lifts, clarifiers, and above ground storage areas for hazardous materials. Figure 3 presents a site plot plan with the details of the former Building 76A area. The eastern-most UST

June 1992 site investigation: soil samples were analyzed for metals

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

(A1-N) was used to store PCE and served as a central supply point for Lockheed's other plants in Burbank. The PCE was dispensed to tanker trucks and transported to the various Lockheed Burbank plants.

2.1.2 Building 76A Demolition

The demolition of Building 76A was conducted during February-April 1992, demolition activities included removal of the four USTs and associated piping and dispensers; removal of the building, floor slab, and foundations; and removal of all below grade improvements including hydraulic lifts, clarifiers, storm drains, utilities and sewers. During the demolition process, areas of stained soil were noted, and soil samples were collected to determine if elevated concentrations of regulated chemicals were present. Shallow stained soil was found in the western portion of Building 76A and around the USTs, piping, and dispenser islands. Several site investigations were performed and the stained soil was found to be affected by solvents and petroleum hydrocarbons. The affected soil excavated during the UST removals and building demolition was sent off-site for disposal. A report on the demolition monitoring and soil sampling was prepared by ASL in April 1992.

A total of four, single walled, steel, 12,000 gallon underground storage tanks (USTs): one, 550 gallon, single walled, steel, used oil tank; one concrete 1600 gallon clarifier; and seven dispensers were removed from the site. The two western-most 12,000 gallon USTs contained unleaded fuel (see Figure 3), the third 12,000 gallon UST (central) contained diesel fuel and the fourth contained PCE. The fuel and PCE UST's were pressure tested in August of 1985 and found to be tight. Table 1 (below) presents a summary of the liquid storage tanks that were present at Building 76A.

TABLE 1
List of Former Building 76A
Underground Storage Tanks (USTs)
and Clarifiers:

<u>Id</u>	<u>Type/Capacity</u>	<u>Use/Contents</u>	<u>Status/Yr</u>
A1-F8	UST/12,000 Gal. Steel	Unleaded Fuel	Removed/92
A1-F9	UST/12,000 Gal. Steel	Unleaded Fuel	Removed/92
A1-F10	UST/12,000 Gal. Steel	Diesel Fuel	Removed/92
A1-N	UST/12,000 Gal. Steel	Tetrachloroethene	Removed/92
A1-U	UST/550 Gal. Steel	Used Oil	Removed/85
A1-V	Clarifier/1,600 Gal. Conc.	Steam Clean Water	Removed/92*

* Clarifier A1-V was installed in 1988.

The tanks and clarifier were removed under the supervision of an Inspector of the City of

Burbank Fire Department (CBFD). The Inspector directed the collection of 21 soil samples from beneath the removed tanks, associated product lines, and dispenser islands. Eight soil samples were collected from beneath the USTs, nine soil samples were collected from beneath the product piping, and four soil samples were collected from beneath the dispenser islands. Soil samples were collected from depths approximately 5 feet below the tank invert and the product piping. Appendix B, Section 1.0 presents a summary of the laboratory analytical results from the UST removal and soil sampling and a plot plan showing the soil sample collection locations.

Based on the laboratory analytical results of the soil samples collected, the soil in the vicinity of the line from the PCE tank and beneath the dispenser were found to contain PCE. Diesel fuel was also found to be present beneath the dispenser area with the PCE. In addition to the USTs, ten hydraulically operated vehicle lifts were removed from the inside of Building 76A. Hydraulic fluid or oil was found to be present in the soil beneath and around several of the former vehicle lifts.

Imported soil backfill brought in as a portion of the demolition activities was placed into the UST excavation on February 28, and 29, 1992 and compacted to 90 percent relative compaction.

2.2.0 Regional Geology and Hydrogeology

2.2.1 Regional Geology

Plant A1 South is located south and west of the Verdugo Mountains within the southeastern San Fernando Valley. The San Fernando Valley is an alluvial basin that is approximately 23 miles long and 12 miles wide and contains up to 1000 vertical feet of alluvium material. The alluvium includes [from youngest (top) to oldest (bottom)]:

- ▶ Younger Alluvium (0 to 10,000 years old),
- ▶ Older Alluvium (10,000 to 1 million years old), and the
- ▶ Saugus Formation (1 to 2 million years old)(Oakshott, 1958; Johnson et. al., 1973 as reported by ASL, 1992).

The Younger Alluvium is composed primarily of an accumulation of boulders, coarse to fine gravel and sand which was deposited as coalescing alluvial fans west of the Verdugo Mountains. The Older Alluvium mainly consists of coarse unconsolidated sand and gravel with minor amounts of clay [State Water Resources Control Board (SWRCB), 1962 as reported by ASL, 1992]. The Saugus Formation unconformably overlies an older Tertiary Geologic Age (1.6 to 66.4 million year old) marine sediment.

The Verdugo Fault extends under the alluvium between the Verdugo Hills and the Pacoima Hills, and lies approximately 1.1 miles northeast of Plant A1 South. This fault displaces the pre-

FINAL REPORT

Cretaceous Geologic Age (greater than 66.4 million years old) granitic and metamorphic rock basement complex.

2.2.2 Regional Hydrogeology

The Plant A1 Complex is located within the San Fernando Groundwater Basin (SWRCB, 1962 as reported by ASL, 1992). The depth to groundwater was reported to be approximately 180 feet below the ground surface (LESAT, 1994).

According to the LESAT Monthly Groundwater Elevation Data Reports, the groundwater beneath the complex has risen approximately 20 feet since March of 1994 and has a gradient of approximately 0.002 feet per foot towards the southeast (LESAT, 1994; Hargis & Associates, 1992).

2.2.3 Local Subsurface Conditions

The soil beneath the site primarily consists of fill soil from the surface of the site to a depth of between five and ten feet. The fill reportedly consists of silty sand [Unified Soil Classification System, (USCS) classification SM]. (A copy of the USCS is presented in Appendix C.) Compacted fill is present in the former UST zone to a depth of 13 to 18 feet. The remainder of the soil beneath the site is reported to be composed of medium dense to dense, slightly moist to moist, fine to medium or coarse sand with trace silt (SW,SP). Gravel, cobbles or boulders have been reported to be present in the subsurface throughout the Burbank California area. Groundwater is present at a depth of approximately 180 feet beneath the site (well A-1-CW-9, northeast corner of the site) and perched groundwater has not been reported.

SECTION 5.0
SECTION 6.0
APPENDIX

3.0 PREVIOUS ENVIRONMENTAL SITE INVESTIGATIONS

Previous environmental site investigations performed at the site include the following:

- ▶ Underground Tank Leak Detection Investigation (Gregg and Associates, 1985),
- ▶ Preliminary Site Assessment; Tank A1-F8, A1-F9 and A1-N, Gasoline Station, Plant A1, Lockheed Aeronautical Systems Company, Burbank California (ENSR, 1990),
- ▶ Tank Closure Report, Plant A1 South, 2311 North Hollywood Way, Burbank California (Converse Environmental West, 1992),
- ▶ Environmental Assessment (McLaren/Hart, 1992),
- ▶ Site Investigation and Characterization (ASL, 1992),
- ▶ Soil-Gas Survey (ASL, 1993),
- ▶ Soil Characterization Field Study (Lockheed Martin Corporation, 1994-95).

A summary of the significant findings from the previous environmental investigations are presented below.

3.1.0 Underground Leak Detection Investigation

Gregg and Associates (Gregg) performed an environmental subsurface soil investigation in the vicinity of the former Building 76A USTs in 1985 and 1986. The investigation included the drilling of 14 soil borings in the UST area and the installation of vapor monitoring wells. The borings ranged from 15 to 40 feet in depth and a total of 17 soil samples were collected from the soil borings and submitted to the laboratory. The samples were then analyzed for the presence of PCE. PCE was not detected in any of the soil samples submitted to the laboratory for analysis. A summary of the laboratory analysis results are presented in Appendix B, Section 1.0. A summary of the sample locations and the laboratory analysis results for the PCE are presented in Table 2 of this report. The soil boring locations are shown on Figure 3.

3.2.0 Preliminary Site Assessment

ENSR Consulting and Engineering (ENSR) continued the subsurface soil investigation around the Building 76A USTs in December 1988 through June of 1989 (ENSR, 1990). This investigation included the installation of 14 additional soil borings in the vicinity of the four, 12,000 gallon fuel USTs. The laboratory analysis results included TPH, benzene, toluene, ethylbenzene, xylene, PCE, 4-methyl 2-pentanone and acetone. A total of 27 soil samples were collected from the soil borings and analyzed for the presence of PCE. PCE was detected in four of the soil samples collected, they were: boring EA1-4N (3 foot depth); EA1-5N (2.5 foot depth); EA1-6N (4 foot depth) and EA1-8N (5 foot depth). TPH, toluene and xylene were also detected in the sample recovered from boring

3.3.0 Tank Closure Report

Converse Environmental West (CEW) observed the excavation and removal of four 12,000 gallon USTs and the associated dispensers during late February, 1992. A total of eight soil samples were collected from below the former USTs, nine soil samples were collected from below the former piping and four soil samples collected from beneath the former dispenser. Table 3 presents a summary of the laboratory analysis results for PCE. Appendix B, Section 3 presents copies of the laboratory analysis results from the CEW report (CEW, 1992)

3.4.0 Environmental Assessment

McLaren/Hart completed a Phase I Environmental Assessment (EA) of Plant A-1 South. The investigation involved a review of historical operating practices at the plant, interviews with employees, a site inspection, and aerial photo review. The purpose of the EA was to identify possible areas of environmental concern which might require further investigation. The EA report was submitted by McLaren/Hart in January, 1992 (McLaren/Hart, 1992).

SECTION 5.0
SECTION 6.0

June 1992 site investigation, soil samples were analyzed for metals

limits of excavation

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

The EA identified several areas of the plant, primarily in and around Building 76A, which were suspected to contain elevated concentrations of hydrocarbons in the subsurface. The features in the Building 76A area such as underground tanks, piping, hydraulic lifts, clarifiers, etc. were identified as potential sources. In addition, the review of historical operating practices revealed that surface spills of fuels and PCE had occasionally occurred at the dispensing islands and near the eastern perimeter fence where a temporary above ground PCE holding tank had been located. These areas were targeted for further subsurface investigation and are discussed in section 3.50 below.

3.5.0 Site Investigation and Characterization

Although investigation activities were performed prior to 1992 as part of Lockheed's UST compliance program, a comprehensive subsurface investigation had not been completed. Based on the information compiled in the EA and the observations from the demolition of Building 76A, a comprehensive subsurface investigation was performed in June 1992 by ASL Consulting Engineers (ASL). This investigation consisted of completing a total of 78 soil borings across the parcel. Fifty-eight of the borings were concentrated in the Building 76A area (ASL, 1992).

Forty-eight of the soil borings were completed to depths of 10 or 20 feet. Nine borings were completed to a total depth of 35 to 40 feet and one boring was completed to a depth of 80 feet. A total of 344 soil samples were collected from the 78 borings. Two-hundred and eight of the soil samples were collected from the 58 soil borings installed in the Building 76A area from a depth of 5 feet or below. A summary of the soil sample analysis results are presented in Appendix B, Section 4. Figure 4 presents the locations of soil borings completed in the Building 76A area during the 1992 investigation.

Soil samples were analyzed for the presence of metals, polychlorinated biphenyls (PCBs), Total Petroleum Hydrocarbons (TPH), and for Volatile Organic Compounds (VOCs), including PCE. The principal chemicals identified in the soil samples were diesel fuel, oil, and PCE. TPH (fuels and oils) was generally confined to the shallow subsurface soil above a depth of 10 feet in the western portion of Building 76A. Only one boring, B76A-46, showed significant concentrations of TPH at depths greater than 10 feet. In this boring, located at one of the dispenser islands, petroleum hydrocarbons were found in conjunction with PCE to a depth of 25 feet.

Elevated VOC concentrations were generally limited to the shallow subsurface soil in the eastern portion of Building 76A which included the underground storage tanks, piping and dispensing systems. The areas of the plant which contained elevated concentrations of PCE generally conformed with the areas where product dispensing, storage, and surface spills had been reported.

Following the demolition of Building 76A and the completion of the subsurface soil investigation,

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

the CRWQCB requested, that Lockheed complete a soil gas survey at the plant to ensure that no source areas had escaped detection during the previous investigation and to confirm the results of the site characterization investigation. A summary of the soil-gas survey is presented in section 3.6.0 of this report.

3.6.0 Soil-Gas Survey

A total of 181 soil-gas samples were collected from 159 sampling locations across the parcel. Soil-gas samples were collected from a depth of five feet Below the Ground Surface (BGS). The soil samples were collected between September 23 and October 7, 1993. A soil-gas probe grid spacing of 100 feet was used across the majority of the Plant A1 South parcel. Soil-gas probes located in the Building 76A area were placed at 20 foot intervals.

One-hundred and nine of the soil-gas probes were completed in the Building 76A area. Eighty nine soil-gas samples were collected from a depth of five feet. The data collected from a depth of five feet was reviewed with a representative of the CRWQCB and the locations for 20 additional soil-gas samples to be collected from a depth of between 10 to 25 feet BGS were selected. Soil-gas samples collected in the former UST vicinity were collected from a depth of 25 feet BGS and the remainder of the soil-gas samples were collected at depths of between 10 and 20 feet. Figure 2 presents the locations of the soil gas probes across the entire parcel, and Figure 4 presents the locations of the soil-gas probes completed in the Building 76A area.

The soil-gas samples were analyzed for the standard list of 22 chlorinated and aromatic compounds required by the CRWQCB. Appendix B (Section 5.0, Table 4-5), presents a summary of the concentrations of analytes detected in the soil-gas survey.

3.6.1 Five Foot Depth

Twelve of the soil-gas samples collected from a depth of five feet, in the Building 76A area were found to contain concentrations of PCE in excess of 0.1 milligrams per liter in air (mg/l-air). The probes were numbered 104, 105, 113, 114, 115, 126, 127, 128, 140, 141, 142 and 150. Only one of these soil-gas samples was found to contain concentrations of PCE in excess of 1.0 mg/l-air. The probe location which was found to contain concentrations of PCE in excess of 1.0 mg/l-air was probe number 114 (2.2 mg/l-air). This sample was collected from the vicinity of the southern end of the western dispenser islands, adjacent to boring B76A-48. Figure 4 presents the soil-gas probe locations.

3.6.2 Twenty Foot Depth

Five of the above listed soil-gas probes (Probes Numbered 105, 114, 115, 127 and 150) were

limits of excavation

limits of excavations

SECTION 5.0

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

extended to a depth of 20 feet and re-sampled. None of the soil-gas samples collected from a depth of 20 feet were found to contain concentrations of PCE in excess of 1.0 mg/l-air.

Figure 5 presents a detail map of the eastern portion of Building 76A and the locations of the soil-gas probes and the approximate location of PCE concentrations greater than 0.5 mk/l-air or 0.5 mg/kg detected in the soil-gas samples collected from a depth of 20 feet. Figure 6 presents a cross section schematic of the subsurface beneath the former dispenser area. Table 4 below presents a summary of the concentrations of PCE detected in the soil-gas probes and the soil borings.

limits of excavations

3.7.0 Soil Characterization Field Study

Lockheed Martin Corporation installed a total of four additional soil borings and seven soil-gas probes in December 1994 and January 1995. The additional work was required by the CRWQCB to provide additional site characterization. The soil borings were installed in the former dispenser and vehicle lift areas to further evaluate the concentration of PCE, TPH and TRPH in the soil. The soil-gas probes were installed to further evaluate the vapor phase PCE plume. A brief description of each phase of the evaluation follows.

3.7.1 Soil Borings

Lockheed Martin Corporation installed a total of four additional soil borings. The first soil boring (B76A-59) was installed to a depth of 60 feet and was placed in the estimated location of boring B76A-48 to further characterize the soil column. The second soil boring (B76A-60) was installed to a depth of 60 feet and is located between the estimated location of boring B76A-46 area and soil-gas probe number 127. B76A-60 was installed to evaluate the soil condition south of the dispenser area. The third soil boring (B76A-61) was installed to a depth of 30 feet in the B76A-34 area to confirm the PCE concentrations of 2.5 mg/kg PCE at a depth of ten feet and non-detect at a depth of 15 feet. Soil boring four (B76A-62) is located near the estimated location of soil boring B76A-46 and was extended to a depth of 60 feet. Soil boring B76A-62 was installed to evaluate the condition of the soil beneath the dispenser. Figure 7 and 8 present the locations of the proposed soil borings.

Soil samples were collected from the soil borings at five foot intervals, beginning at a depth of five feet BGS. The soil samples were collected in general accordance with the Drilling Soil Sampling and Sample Handling Guidelines presented in Appendix C.

Selected soil samples collected from the borings were submitted to Curtis and Tomkins LTD., a analytical laboratory certified by the State of California. The soil samples selected for analysis, were based on field observations. Table 5 below presents a summary of the soil boring sample laboratory analysis results:

The upper 25 feet of the soil borings was allowed to remain undisturbed until completion of the soil sampling for the soil-gas probes during the soil excavations. A temporary seal was placed around the top of the borings and weighted plywood was placed over the soil to prevent excavation. Soil samples generated during the soil characterization were placed in 55 gallon drums and disposed of at the Lockheed Martin site. The remaining soil was placed in 55 gallon drums and disposed of at the Lockheed Martin site. Wash water was collected and disposed of at the Lockheed Martin site.

The soil samples collected from the soil borings were analyzed by United States Environmental Protection Agency (USEPA) Method 8240.

- NA Indicates not analyzed.
- TD Indicates that the total proposed depth was attained and the previously listed soil sample was the last soil sample obtained.
- ND Indicates that PCE was not detected at the detection limits (0.005 mg/kg for soil samples).
- * Indicates that the soil sample was collected at a depth of 52 feet due to poor recovery at 50 feet.
- ** Indicates soil sample tested by USEPA Method 1311 extraction method for the Toxicity Characteristic Leaching Potential (TCLP) VOC analysis by USEPA method 8240. All samples were Non-Detect for the presence of PCE leachate at the 0.005 $\mu\text{g}/\text{kg}$ detection limit.
- Indicates soil sample analyzed for the presence of lead by USEPA method 6010. All concentrations detected were less than 2.4 mg/kg.

The soil samples were accompanied to the laboratory by a chain-of-custody document from the time of sampling until the samples are received at the laboratory. A copy of the chain-of-custody document and the laboratory analysis results are presented in Appendix B, Section 6.0.

The upper 25 feet of the soil borings was allowed to remain un-filled after completion of the soil sampling for use as reference points during the soil excavation. A temporary seal was placed around the top of the boring and weighted plywood was placed over the seal (to await excavation).

Soil cuttings generated during the soil characterization were placed in 55 gallon DOT approved open top drums or was stockpiled on 10 mil visqueen type material and covered to await disposal. The soil cuttings were disposed of with the soil removed during the soil remediation. Wash water and equipment rinsate generated during the soil characterization was placed into one DOT 1A1, 55 gallon drum for temporary storage. A water sample was collected from the drum on March

limits of excavation

limits of excavations

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

3, 1995 and submitted to the laboratory for analysis. The sample was analyzed for the presence of TPH and PCE by USEPA method 8015 and 8240 respectively, and the sample analysis results were used to characterize the contents of the drum for disposal. The results of the analysis indicated that the contents of the drum were non-hazardous. Copies of the disposal documents are presented in Appendix F and will be discussed in Section 5.7.0 of this report.

3.7.2 Soil-Gas Survey

A total of seven soil-gas probes (SG-159, SG-160, SG-161, SG-162, SG-163, SG-164 and SG-165) were installed at the direction of the CRWQCB. Four of the probes (SG-162, SG-163, SG-164 and SG-165) were installed adjacent to and around the estimated location of soil boring B76A-46. Soil-gas probe locations are presented on Figure 7 and 8. The probes were advanced to a depth of 30 feet and prepared for the collection of a soil-gas sample. Soil-gas samples were collected at depths of 30, 35, 40, 45 and when possible at a depth of 50 feet (SG-164 and SG-165).

The remaining three soil-gas probes (SG-159, SG-160 and SG-162) were located approximately four feet from soil borings B76A-59, B76A-60 and B76A-61 respectively. Soil-gas samples were obtained from a depth of 30 feet, 35 feet, 40 feet and 45 feet in SG-159 and SG-160 and from depths of 5 feet, 10 feet, 15 feet and 20 feet in SG-161.

Table 6 (below) presents a summary of the PCE concentrations detected in the Soil-gas probes.

* Indicates in-situ soil-gas concentration in Probe Number SG-159, as analyzed by the California Regional Water Quality Control Board (CRWQCB) Well Investigation Program (WIP) Method 8010 modified. The soil gas probes were purged at 150 milliliters per minute.

Refusal Indicates that the probe was not able to advance to the listed sampling depth and soil samples were not collected at this interval.

NA Indicates not analyzed.

TD Indicates total proposed depth was attained

The soil-gas samples were collected according to the CRWQCB WIP guidelines. A description of the WIP guidelines is presented in the ASL Soil-Gas Sampling workplan and report (see References).

3.8.0 Previous Geotechnical Study

A preliminary geotechnical study was performed in the Building 76A area by Converse Consultants West (CCW) in January, 1992. The study consisted of the excavation of four test pits to depths of ten feet. The soil lithology and shallow structure was described in accordance with the Unified Soil Classification System (USCS) as the excavations advanced. Relatively undisturbed soil samples were collected from two of the test pits in ring type samplers for consolidation tests and direct shear tests. Bulk soil samples were also collected for grain size analysis and compaction curves (maximum density/optimum moisture test). Figure 3 presents the locations of the excavations. The

FINAL REPORT

excavations were backfilled and compacted with the backhoe bucket upon completion.

Trench number 2 was located near the eastern end of the former Building 76A. The soil samples collected from the pit were described as a gray, fine sand with some medium grains (SP according to the USCS classification), slightly silty, with lenses of sandy silt (ML). Soil moisture was tested and determined to be four percent moisture in the soil sample collected from Trench number 2.

3.9.0 Summary of Previous Environmental Investigations

Seven environmental investigations have been performed at the Lockheed Plant A1 South facility. Six of the investigations included the installation of soil borings or soil vapor probes in the building 76A area. Table 7 below presents a summary of the borings, soil-gas probes and the samples collected during the investigations and Figures 7 and 8 present the locations of the soil borings and probes.

Table 7

The soil samples listed below were found to contain concentrations of PCE in excess of 0.5 mg/kg or 0.5 mg/l-air.

- ▶ ENSR Affected Boring Numbers and Depth of Sample: EA1-4N, 3 foot; EA1-5N, 2.5 foot and EA1-6N, 4 foot.
- ▶ CEW Affected Boring Numbers and Depth of Sample: PL-3, 6 foot.
- ▶ ASL (1992) Affected Boring Numbers and Depth of Sample: B76A-17, 5 foot (affected) Non Detected (ND) at 10 foot; B76A-34, 10 foot (affected), ND at 15 foot; B76A-46, 5 foot (affected), 10 foot (affected), 15 foot (affected), 20 foot (affected) and 25 foot (affected), ND at 30 foot.
- ▶ ASL (1993) Affected Probe Number and Depth of Sample: 114, 5 foot.

limits of excavation

limits of excavations

**LOCKHEED MARTIN BLDG. 76A
FINAL REPORT**

Only 18 of the 426 soil samples which were submitted to the laboratory were found to contain concentrations of PCE in excess of 1.0 mg/kg . The measurements which exceeded 1.0 mg/kg or 1.0 mg/l-air were found in eleven of the soil borings (or sample locations, IE some of the borings or probes had at least two intervals which exceeded 1.0 mg/kg).

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

4.0 PLANT A1 SOUTH, BUILDING 76A SOIL REMEDIATION

LESAT met with the CRWQCB, Los Angeles Region on January 4, 1995 to discuss the soil clean-up goals for the Plant A1 South, Building 76A area. During the discussion, examples from the Interim Guidelines for Remediation of VOC Impacted Sites (CRWQCB, 1994) were reviewed as well as information specific to the Building 76A area. The site information discussed included the depth to the groundwater, the current condition of the groundwater and the Lockheed Martin Corporation groundwater recovery operation (the Burbank Operable Unit) which will be operating down gradient (southeast) of Plant A1 South.

Groundwater is present beneath the Plant A1 South area at a depth of approximately 180 feet below the ground surface. PCE has been detected in the groundwater beneath the Plant A1 South area in concentrations of up to 1,400 µg/L in well number A1-CW-9 (April 1994, LESAT, 1994). The Burbank Operable Unit (BOU) will be recovering and treating up to 9,000 gallons per minute of groundwater from the uppermost aquifer beneath the site. The groundwater beneath the Plant A1 South area has been modeled and is predicted to be within the capture zone of the BOU.

After considering the site specific factors mentioned above, the CRWQCB and LESAT agreed upon 0.150 mg/kg (0.150 mg/kg = 150 µg/kg) of PCE in soil as the target for meeting the remediation objectives for the planned soil excavation at the Plant A1 South, Building 76A site. The CRWQCB agreed with Lockheed Martin that the environmental assessments and evaluations performed at the site yielded the following areas of concern for the Building 76A area:

- ▶ Soil in the vicinity of the former southwestern fuel dispensers was found to contain elevated concentrations of TPH by California Environmental Protection Agency (Cal-EPA) test method 8015 modified for Diesel fuel, Total Recoverable Petroleum Hydrocarbons (TRPH) by United States Environmental Protection Agency (USEPA) test method 418.1 and PCE by USEPA test method 8010/8020. Trichloroethene (TCE) was found to be present in conjunction with the PCE. [Tank removal samples D-4 (5 foot-1,600 mg/kg-PCE), PL-4 (5 foot-400 mg/kg-TRPH) and PL-7 (5 foot-450 mg/kg-TRPH). Soil borings B76A-46 (5 foot-44 mg/kg-PCE, 10 foot-260 mg/kg-PCE, 15 foot-330 mg/kg-PCE, 20 foot-160 mg/kg-PCE and 25 foot-73 mg/kg-PCE)]. This area has been designated excavation number 1 (see Figure 7).
- ▶ Soil in the vicinity of the former used oil tank located south of the former Building 76A contained elevated concentrations of TRPH and PCE. (Soil boring B76A-17 at a depth of 5 feet-130 mg/kg-TRPH and 1.1 mg/kg PCE.) This area has been designated as excavation number 2 (see Figure 7).
- ▶ Soil in the vicinity of the former vehicle lifts specifically, near soil boring B76A-34

SECTION 5.0

SECTION 6.0

APPENDIX B

SECTION 7.0

limits of excavation

limits of excavations

**LOCKHEED MARTIN BLDG. 76A
FINAL REPORT**

contained elevated concentrations of PCE. (2.5 mg/kg PCE at a depth of ten feet and non-detect at a depth of fifteen feet.) This area has been designated as excavation number 3 (see Figure 7).

SECTION 3.0

5.0 SCOPE OF WORK

The remediation of the soil found to contain concentrations of PCE in excess of 150 $\mu\text{g}/\text{kg}$, consisted of excavating the affected soil and transporting the soil to an appropriate disposal site. A portion of the soil which was found to contain PCE also contained TRPH and TPH-diesel. This soil was handled the same as the soil which only contained PCE. The following tasks were performed as a portion of this soil remediation:

- 5.1.0 Task 1 Preparation of a Site Safety and Health Plan
- 5.2.0 Task 2 Completion of Underground Obstruction Clearance
- 5.3.0 Task 3 Construction of the Excavations for Soil Removal
- 5.4.0 Task 4 Collection of Verification Soil Samples
- 5.5.0 Task 5 Completion of Laboratory Analysis of Soil Samples
- 5.6.0 Task 6 Backfilling and Compaction of Excavations
- 5.7.0 Task 7 Handling and Disposal of Excavated Soil
- 5.8.0 Task 8 Preparation of this Report Documenting the Soil Remediation

5.1.0 Task 1 Preparation of a Site Safety and Health Plan

LESAT safety and health professionals prepared a site specific Safety and Health Plan for use during the site investigation. The Safety and Health Plan was prepared in accordance with 29 Code of Federal Regulations (CFR) 1910.120. A copy of the Safety and Health Plan for the Plant A1 South Soil Remediation was forwarded to the CRWQCB. The plan provided safety guidelines for personnel involved in performing the excavation of affected soil, verification sampling, backfilling and compaction of the excavations.

5.2.0 Task 2 Completion of Underground Obstruction Clearance

The suspected location of underground obstructions was estimated, based on existing utility maps and information from previous studies. Actual or suspected utility locations were marked for reference purposes. In addition, "Dig Alert" of southern California (telephone 800-422-4133) was contacted prior to intrusive field investigation and the soil excavation.

A Geophysical survey completed during the site demolition (CEW, 1992) was also reviewed before intrusive field work began. Individual excavation locations were also "cleared for obstructions" prior to initiation of the field proceedings.

limits of excavation

limits of excavations

FIGURES

SECTION 6.0

APPENDIX B

SECTION 3.0

5.3.0 Task 3 Construction of the Excavations for Soil Removal

A total of four excavations were completed in the building 76A area. Three of the excavations were completed in the areas outlined in Section 4.0 of this report and the fourth excavation location was discovered during the field remediation activities.

- ▶ Excavation One, PCE Dispenser
- ▶ Excavation Two, Used Oil UST
- ▶ Excavation Three, Hydraulic Lift
- ▶ Excavation Four, Ramp Area

Overburden soil removed to provide access to the affected soil was excavated, screened with the Photoionization Detector (PID) and stockpiled away from the excavations until the upper limits of the affected soil was encountered. Soil removed from the excavation which was found to contain detectable concentrations of volatile organic vapors was placed into temporary staging areas located near the excavations or loaded directly into awaiting bins. The stockpiles and bins were immediately covered to reduce the possibility of volatilization. The temporary staging areas were constructed of a visqueen type material and were bermed to reduce the possibility of overflow.

The soil was separated in the field as it was removed from the excavation according to the field PID measurements. The PID was calibrated daily to 50 parts per million (PPM, in air) hexane gas or an equivalent. Overburden soil not found to contain volatile organic constituents (by the PID) was separated for re-use as backfill. Soil found to contain elevated concentrations of volatile organics was staged for additional testing or removal. Volatile organic vapors emanating from the stockpiled soil did not exceed 50 mg/kg, therefore a South Coast Air Quality Management District (SCAQMD) rule 1166 excavation permit was not required. The vapor concentrations of the temporary soil stockpiles were measured at a distance of approximately three inches above the stockpiled soil during the excavation process to insure compliance with the SCAQMD rule 1166.

5.3.1 **Excavation One - PCE Dispenser**

Excavation One was completed between January 18, 1995 and March 15, 1995. The excavation was located in the former dispenser area and was approximately 80 feet across (from north to south), approximately 150 feet long (east to west) and extended to a depth of 29 feet. Figures 9 through 12 present maps of the excavation limits over time and soil sample collection locations as the excavation progressed. A chronology describing the daily site activities is presented in Appendix D.

A portion of the excavated soil was temporarily stockpiled and enclosed by a visqueen type material (Stockpile Two, Stockpile One was located within the excavation). Soil samples were collected from the stockpile to evaluate the soil. Copies of the laboratory analysis data are presented in

limits of excavation

limits of excavations

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

Appendix E, Section 1.0. The laboratory analysis data indicated that some of the soil contained concentrations of PCE in excess of 150 $\mu\text{g}/\text{kg}$. Following receipt of the laboratory analysis results, the soil was loaded into roll-off bins for additional characterization and disposal. Subsequently, soil anticipated to contain concentrations of PCE in excess of 150 $\mu\text{g}/\text{kg}$ was loaded directly into lined, DOT approved roll-off type bins.

Once placed into the bins, the soil was covered with a visqueen type material and the roll-off bin lid (if present) was closed to further reduce the volatilization of organic vapors.

Excavation One was constructed in a phased approach to allow characterization of the existing soil and to provide safe working conditions. Excavation One was initiated by digging an X shaped trench approximately three feet deep across the suspected former dispenser area of the site. Soil samples were collected from the trench and submitted to the laboratory for analysis. Following receipt of the laboratory analysis results, the entire area suspected of containing PCE was excavated to a depth of approximately three feet and additional laboratory analyses were performed. The soil sample collection locations were measured with a tape measure and plotted on a map in reference to an arbitrary datum established on the south east corner of Hollywood Way and Vanowen Street. A grid was then established across the site and the soil samples were located on the grid. A portion of the grid is shown on Figure 9.

The excavation increased in size and was extended to a depth of five feet, then seven feet, and twelve feet and an equipment access ramp (Ramp 1) was built on the southeastern side of the excavation (see Figures 9 and 10). Soil samples were collected at five and ten foot depths to provide chemical analyses representative of the sidewall of the excavation and to guide the excavation. Visible discoloration was also used to direct the excavation, and the accessible locations that were most suspected of containing PCE were selected for sampling. If the laboratory analysis results indicated that the concentrations of PCE remaining in the excavation sidewall were in excess of 150 $\mu\text{g}/\text{kg}$, an additional five to ten feet of soil was removed laterally and vertically and new confirmation samples were collected. This process was continued until the concentrations of PCE detected were less than 150 $\mu\text{g}/\text{kg}$. Soil sample analysis results were generally received within 24 to 48 hours of sample collection.

The excavation soil samples were collected by hand in excavations of less than five feet in depth. Excavation sidewall and bottom soil samples collected from depths of greater than five feet were collected by lowering the excavator bucket into the excavation and bringing the bucket to the ground surface. The contents of the bucket were screened with the PID and a relatively undisturbed soil sample was collected from the bucket. Guidelines for the soil sample collection activities are included in Appendix C and details of the collection of excavation verification samples are discussed in section 5.4.0 (below).

FIGURES

SECTION 6.0

APPENDIX B

SECTION 3.0

limits of excavation

limits of excavations

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

The soil encountered during the excavation consisted primarily of slightly moist to moist, brown sand and silty sand with occasional cobbles. Caving of the sidewalls was common after drying. The lateral extent of the excavation was enlarged to provide benches approximately 10 feet wide around the excavation at a depth of approximately 12 feet. The excavation primarily centered on the area beneath the former PCE dispenser to a depth of approximately 14 feet. The PCE plume migration changed from primarily vertical to vertical with a southerly component at a depth of approximately 15 feet. This apparent shift seemed to be due to the presence of a gravel lense encountered at a depth of approximately 14 to 15 feet.

A second ramp (Ramp 2) was built on the northwestern side of the excavation to provide better access to the migrating plume and the excavation was extended to a depth of approximately 15 feet. (see Figures 10 and 11). The center of the adjusted excavation was then extended to a depth of 20 to 25 feet where a silty sand layer was encountered. Laboratory analyses were performed on soil samples collected from five foot vertical intervals to guide the excavation and to confirm the chemical composition of the material allowed to remain in place.

The excavation was once again widened to provide 10 to 15 foot wide berms around the excavation (at a depth of approximately 15 to 17 feet) and the excavation was extended to a depth of 29 feet. Table 8 (see section 5.3.4, below) presents a Summary of the Excavation Statistics for the Building 76A area soil remediation and Table 9 (section 5.5.0) presents a summary of the laboratory analysis results and the depth interval where the excavation sidewall and bottom soil samples were collected. Copies of the laboratory analysis results and chain-of-custody documents are presented in Appendix E, Section 2.0. Figure 12 presents a map showing the approximate soil sample collection locations and the final excavation limits. Figure 14 presents two cross sectional diagrams of the excavation area.

5.3.2 Excavation Two - Used Oil UST

Excavation Two was installed in the former used oil tank vicinity and was completed between March 15, 1995 and April 4, 1995. The excavation was a narrow wedge shaped excavation which extended to a depth of approximately ten feet in the vicinity of the former used oil tank (see Figure 13). This excavation was approximately thirty five feet wide and was partially located within Ramp Two. Soil samples were collected as described in section 5.3.1 (above) and in Appendix C. The soil samples were tested for the presence of PCE. The test methods employed and the laboratory analysis results are presented in Section 5.5.0 of this report. The measured locations where the soil samples were collected are depicted on Figure 13. Table 8 presents a Summary of Excavation Statistics and Table 10 presents a summary of the laboratory analysis results and the depth interval where soil samples were collected. Copies of the laboratory analysis results are presented in Appendix E, Section 2.0.

FIGURES

SECTION 6.0

5.3.3 Excavation Three - Hydraulic Lift

Excavation Three was primarily completed between March 17, 1995 and April 4, 1995. This excavation was located near the western end of the former Building 76A, in the former vehicle lift area. The excavation was rectangular in shape, and was approximately 35 feet wide and 50 feet long with the equipment access ramp located on the northern side. The excavation extended to a depth of approximately 14 feet. Soil samples were collected as described in section 5.3.1 and in Appendix C. The soil samples were tested for the presence of PCE in excess of 150 $\mu\text{g}/\text{kg}$ and oil. The test methods employed and the laboratory analysis results are presented in Section 5.5.0 of this report. The location and configuration of excavation three and the locations where the soil samples were collected are depicted on Figure 15. A summary of the excavation statistics and a summary of the laboratory analysis results for Excavation Three is presented in Tables 8 and 11. Copies of the laboratory analysis results are presented in Appendix E, Section 3.0.

5.3.4 Excavation Four - Ramp Area

Excavation Four was completed between March 14 and May 3, 1995. During the excavation of the equipment access Ramp Two (for Excavation One), discolored soil which contained detectable concentrations of volatile organic vapors (as measured by the PID) was encountered. The discolored soil was located on the southern side of the ramp in the vicinity of the former PCE UST. Two soil samples were collected from a depth of approximately three feet, in the areas suspected of containing hydrocarbons. The samples, labeled TT-CW-1 and TT-CW-2 were submitted to the laboratory for analysis (see Table 12 and Figure 16).

PCE and TRPH was detected in the soil samples (TT-CW-1 and TT-CW-2), and a fourth excavation was initiated. Excavation four was completed on the southern side of Ramp Two in the vicinity of the former PCE UST and piping. Excavation Four was wedge shaped, and was approximately 20 feet wide and 20 feet long and was open along the northern side. The excavation extended to a depth of approximately 14 feet. Soil samples were collected as described in section 5.3.1 and in Appendix C. The soil samples were tested for the presence of PCE in excess of 150 $\mu\text{g}/\text{kg}$, diesel fuel constituents or oil. The test methods employed and the laboratory analysis results are presented in Section 5.5.0 of this report. The location and configuration of excavation four and the locations where the soil samples were collected are depicted on Figure 16 and 17 and a summary of the excavation statistics and the laboratory analysis results for Excavation Four is presented in Tables 8 and 12. Copies of the laboratory analysis results are presented in Appendix E, Section 4.0.

Area marked with **** contains Total Recoverable Petroleum Hydrocarbons (TRPH) according to USEPA Test Method 418.1.

5.4.0 Task 4 Collection of Verification Soil Samples

A total of 109 verification soil samples were collected from the excavation sidewalls and bottoms to confirm the condition of the soil remaining in place. The soil samples were submitted to an on-site mobile laboratory [Advanced Technology Laboratories (ATL)] or to a stationary laboratory (Curtis and Tompkins, Ltd or ATL.) for analysis. Details of the analyses are presented in section 5.5.0 (below).

Soil samples were collected from the sidewalls of shallow excavations (up to 5 feet deep) by driving a hand sampling tool (ring sampler) into the desired sampling location and retrieving the sample or by manually pushing a clean soil sample container into the soil and digging the sample container from the soil. Details of the soil sampling and sample handling guidelines are presented in Appendix C and general sampling safety guidelines were presented in the site safety and health plan (LESAT, 1994).

Soil samples collected from deeper excavations were sampled by lowering the excavator bucket into the excavation and recovering a bucket full of soil. Care was taken to recover samples from the least disturbed portion of the excavation and the excavator bucket. The soil samples were recovered from the excavator bucket according to the soil sampling and sample handling guidelines (Appendix C).

FIGURES

5.5.0 Task 5 Completion of Laboratory Analysis of Soil Samples

The soil samples collected during the field investigation were submitted to an on-site mobile laboratory for analysis. The analytical laboratory is certified by the State of California to perform the required analyses. The soil samples were accompanied by a chain-of-custody document from the time of sampling until the samples were received at the laboratory. The chain-of-custody document lists the personnel that handled the samples and the sample condition upon arrival at the laboratory. Copies of the chain-of-custody documents are presented with the laboratory analysis results in Appendix E and F. Selected soil samples were analyzed by one or more of the following methods:

- ▶ United States Environmental Protection Agency (USEPA) Method 8010, for the presence of VOC's,
- ▶ USEPA Method 8015 Modified for Diesel, for TPH in the diesel fuel range,
- ▶ USEPA Method 418.1 for the presence of TRPH,
- ▶ USEPA Methods 7421 for organic lead,
- ▶ USEPA Extraction Method 1311 for the Toxicity Characteristic Leaching Potential (TCLP) VOC analysis.

Tables 9 through 12 present a summary of the Plant A1 South, Building 76A area PCE concentrations detected in the verification soil samples collected from the excavation base and sidewalls.

mg/kg indicates milligrams per kilogram

Coordinates Indicates the southerly distance from an east-west trending datum and the westerly distance from a north-south trending datum. The "0" datum are located at and are parallel to the curb along the eastern boundary of the site on Hollywood Way. The east/west datum dissects the site perpendicular to Hollywood Way (see Figure 9). The intersection of the datum is located at the intersection of Van Owen Street and Hollywood Way. The sample collection locations were measured in the field with a fiberglass tape and are considered to be accurate to plus or minus 2.5 feet

Location Indicates sidewall (S) or base (B) of the excavation at the date sampled.

Status Indicates current status of the soil, bold type indicates removed (R) during excavation or present (P) verification sample.

Date Indicates the date the sample was collected, and/or the analysis date.

NA Indicates that the soil sample was held and not analyzed, ND indicates that the analytes were not detected.

Soil samples collected from the excavation and analyzed by United States Environmental Protection Agency (USEPA) Method 8010 for the presence of tetrachloroethene (PCE) and for Total Petroleum Hydrocarbons as diesel (TPH-D) by California Department of Health Services (DOHS) method 8015 modified..

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

5.6.0 Task 6 Backfilling and Compaction of Excavations

Tetra Tech, Inc. collected soil samples from the proposed import soil at Hansen Dam and submitted the soil samples for laboratory analysis. The soil samples were analyzed for the presence of organic and inorganic constituents as well as for engineering properties. Copies of the laboratory analysis results and supporting documents are presented as Appendix E, Section 6.0.

The results of the sampling indicated that the soil met Lockheed Martin Corporation requirements for use. The Import soil sample analysis results were forwarded to the CRWQCB for review and approval prior to use. Once approved, a total of 2017 tons of soil was placed into the excavations in thin uniform lifts and compacted to at least 90 percent relative density, and to the original surface configuration. The excavation backfilling and compaction process was observed and tested by Tetra Tech, Inc.. Tetra Tech, Inc. prepared a soil compaction report certifying the soil backfill. The report is signed by a State of California Registered Geologist. A copy of the report is included as Appendix G.

5.7.0 Task 7 Handling and Disposal of Rinsate Water and Excavated Soil

The equipment rinsate water and the excavated soil was characterized and transported to an appropriately permitted facility. Section 5.7.1 addresses the equipment rinsate water and Section 5.7.2 addresses excavation one and excavation four, and excavations two and three.

5.7.1 Rinsate Water

One 55 gallon drum of rinsate water was generated during the Soil Characterization Field Study. A water sample was collected from the drum on March 3, 1995 and submitted to the laboratory for analysis. The sample was analyzed for the presence of TPH and PCE by USEPA method 8015 and 8240 respectively, and the sample analysis results were used to characterize the contents of the drum for disposal. Although PCE and TPH were not detected in the equipment rinse water, the liquid was sent to McKittrick Waste Treatment Site for recycling/disposal following receipt of the laboratory analysis results. Copies of the disposal documents are presented in Appendix G.

5.7.2 Excavated Soil

Excavation One included the soil found beneath the dispenser at Building 76A and Excavation Four included the soil from the south side of Ramp Two which was located in the former PCE UST area. The soil excavated from these areas was shipped to the Laidlaw Aptus landfill, located at Aragonite Utah or to the Laidlaw Westmorland landfill located at Westmorland California. Soil

FINAL REPORT

shipped to Aptus, was incinerated and subsequently disposed of at the Class I landfill. Soil shipped to Westmorland was disposed of at the Laidlaw Class I landfill.

The soil was characterized for disposal by excavating the soil and placing the soil directly into a roll-off type bin. Approximately 10 tons of soil was placed into each bin. The surface of the soil within the bin was then divided into ten equal sections. Each of these sections was divided into two sections (the top and bottom). The sections were numbered and a random numbers table was used to select three sections for sampling. The soil samples were then collected from the central area of each of the three sections selected for sampling. The three soil samples collected from each bin were submitted to the laboratory, extracted and the three sample extracts were composited for analysis. A copy of the Lockheed Martin Corporation Interim Guidelines for Collecting Profile Soil Samples Containing Volatile Constituents from Roll-off Bins is presented in Appendix H, Section 1.0. Table 13 (below) presents the results of the sample analysis and the disposition of each bin of soil from these two excavations. Copies of the laboratory analysis results are presented in Appendix E, Section 5.0.

The soil discussed above was shipped under Uniform Hazardous Waste Manifest tracking documents. Copies of the returned manifests (signed by the receiving facility) and the certificate of disposal documents (from Laidlaw) for the soil delivered to the Laidlaw Aptus facility are presented in Appendix H, Section 2.0.

Bin No.	Location	Date	Weight	Disposition

Two screening soil samples were collected from each roll-off bin on January 18, 1995 (labeled A and B).

Soil samples A and B were the initial screening soil samples collected from the Roll-off bins and analyzed by United States Environmental Protection Agency Method 8010. The screening soil samples were collected by using a photoionization detector to locate the area emitting the greatest concentration of volatile constituents from the 1166 monitoring. The random soil samples were collected on February 2, 1995 according to the Lockheed Martin Interim Guidelines for Collecting Profile Soil Samples of Volatile Constituents from Roll-off Bins (see Appendix H). The section numbers indicate which of 20 sections were sampled.

(Roll-off) Bin No. Indicates the individual bin number welded onto each bin.

Disposition Indicates the location to which the soil was moved and the ultimate means of disposal of the soil.

Incinerate Indicates the soil was shipped to Apts., located in Aragonite Utah for incineration and disposal at the Class I landfill.

Class I Indicates that this soil was shipped to Westmorland, California for disposal at the Laidlaw Class I landfill.

mg/kg Indicates milligrams per kilogram.

LOCKHEED MARTIN BLDG. 76A
FINAL REPORT

6.0 SUMMARY

Soil containing PCE, diesel fuel and oil was present at the former Plant A1 South, Building 76A area. Approximately 1,380 tons of soil found to contain PCE was excavated and removed from the site by Shoring Engineers. Soil samples were collected, handled and transported to the laboratory by Tetra Tech, Inc.. Lockheed Martin reviewed the analytical results and characterized the soil for disposal.

Two hundred and eighty nine (289) tons of the soil was shipped to Aptus, located in Aragonite, Utah for incineration and disposal at the Laidlaw Class I landfill and approximately 791 tons of the soil was disposed of at the Laidlaw Westmorland Class I landfill, located in Westmorland, California. Approximately 300 tons of the excavated soil was disposed of at the Laidlaw Lokern Class I landfill located in Lokern, California.

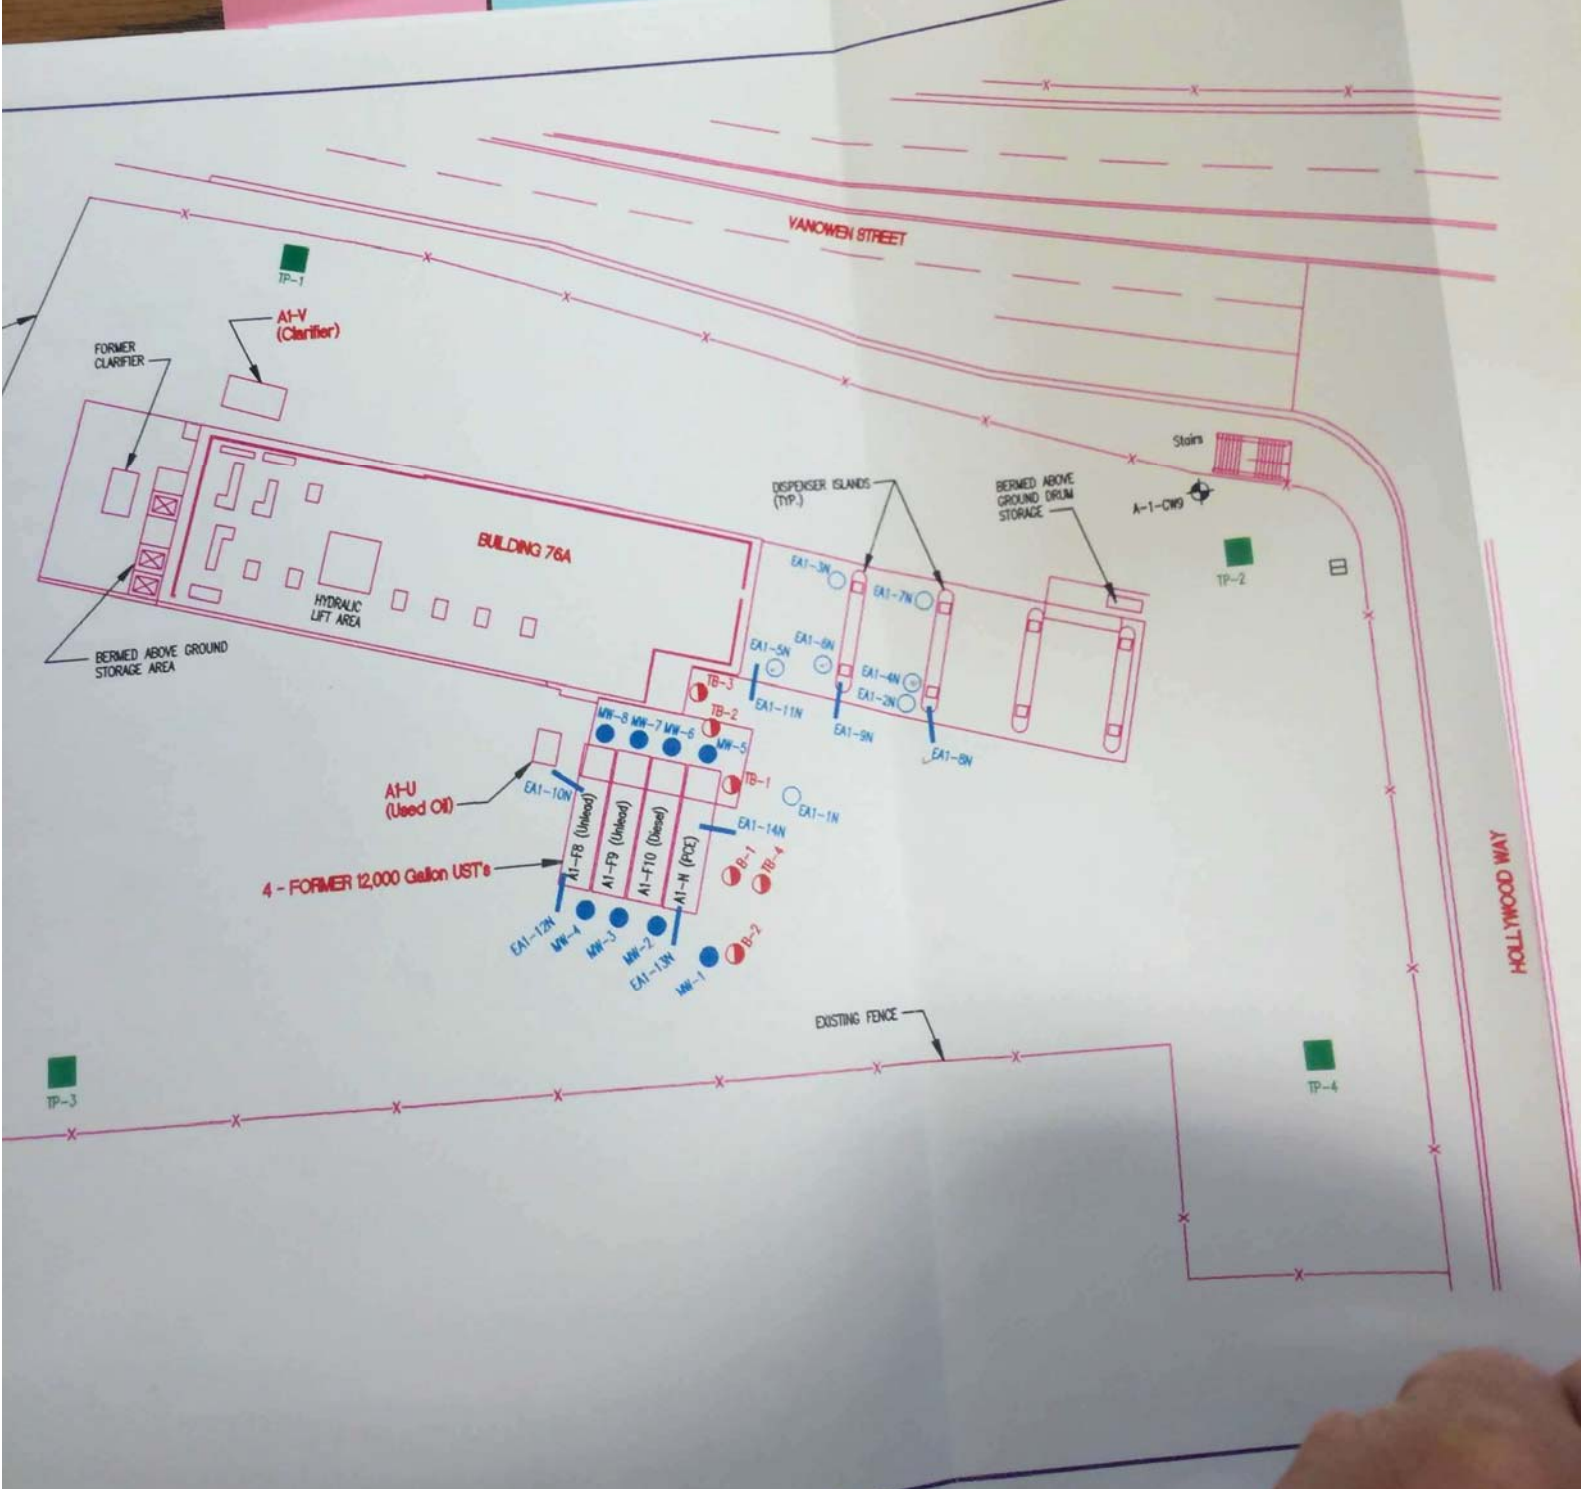

One hundred and nine verification soil samples were collected from the excavation sidewalls and bottoms by Tetra Tech, Inc.. The results of the excavation soil sampling are documented in this report. The verification soil samples collected from the excavation sidewalls contained less than 150 $\mu\text{g}/\text{kg}$ of PCE. Diesel fuel and oil which was also present in the soil with the PCE was also removed.

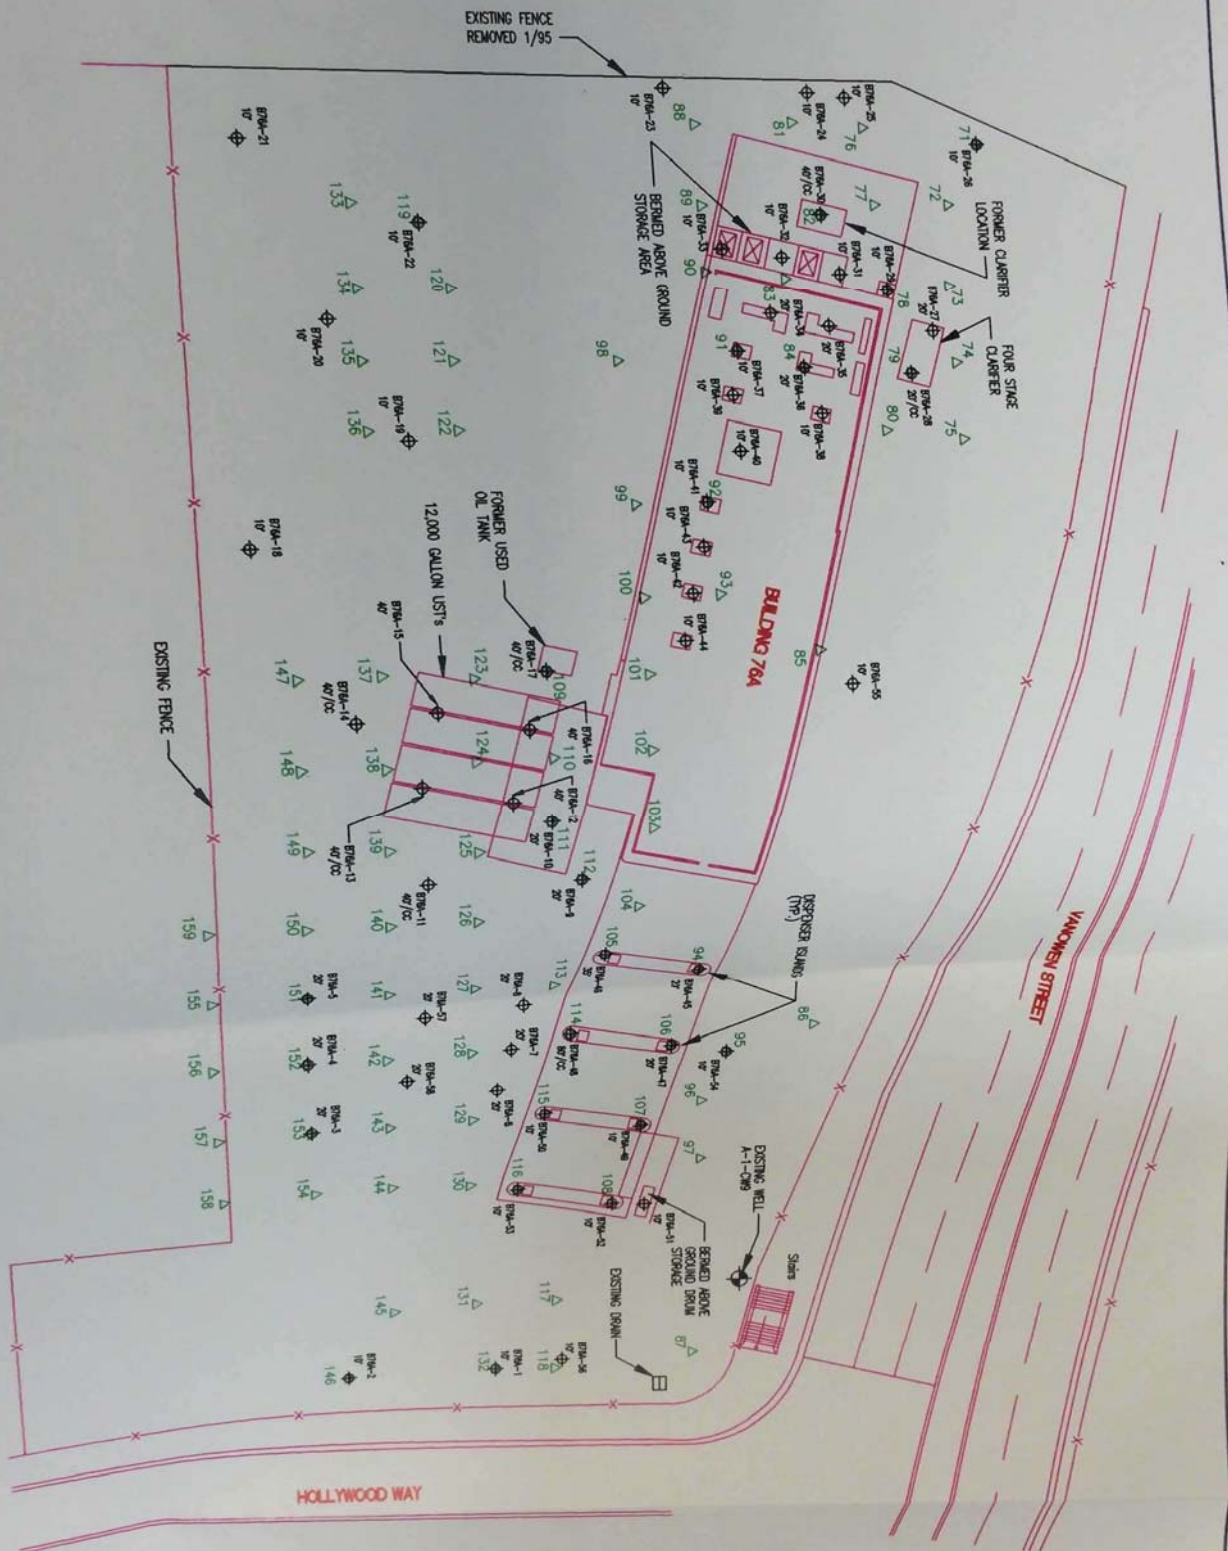

Following approval of the excavations and the backfill material by the CRWQCB, the excavations were backfilled with soil from Lockheed Martin Corporation, Plant A1 East and soil from Hansen Dam. Characterization sampling of the import soil for backfill, and compaction of the soil was performed by Tetra Tech, Inc..

The verification soil samples collected from the excavation base and sidewalls of the soil remaining in place did not detect the presence of PCE in excess of 150 $\mu\text{g}/\text{kg}$. Lockheed Martin Corporation has completed the tasks proposed in the Soil Remediation Workplan for Building 76A, Lockheed Plant A1 South. No further environmental action is planned for this site and we request that closure of the environmental remediation for Plant A1 South be granted by the CRWQCB.

- Legend**
- 95 / ● 102 indicates two soil samples from the same coordinate location (elevation may vary)
 - 88 indicates sample point number
 - soil sample point (typ.)
 - + Indicates sample depths from 5' to 7'
 - ★ Indicates sample depths from 7' to 10'
 - Indicates sample depths from 10' to 15'
 - Indicates sample depths from 15' to 20'
 - ⊕ Indicates sample depths from 20' +

TYPICAL NOTES:

1. Concentrations are reported as milligrams per kilograms (mg/kg) and indicate the concentrations of Tetrachloroethene (PCE) detected by United States Environmental Protection Agency (USEPA) Method 8010. TPH indicates the concentration of Total Petroleum Hydrocarbons (TPH) in mg/kg detected by USEPA Method 8015 modified.
2. All Structures indicated on this map are former Structures. The Buildings and UST's were demolished and removed in 1992.
3. All Coordinates shown are approximate and were measured, not surveyed.
4. Visual discoloration associated with elevated photoionization (PID) Detector readings were noted at the southern end of the western Dispenser Island. The excavation focused on the discolored soil and elevated PID readings which migrated towards the south with depth.

CALIFORNIA REGIONAL WATER
QUALITY CONTROL BOARD
LOS ANGELES REGION

December 4, 2000

Mr. Dennis A. Dickerson
Executive Officer
California Regional Water Quality Control Board
Los Angeles Region
320 W. 4th Street, Suite 200
Los Angeles, California 90013

Subject: Requirement for a Technical Report Pursuant to California Water Code Section 13267 –
Lockheed Martin Plants A-1 North, Building 85, A-1 East, A-1 South, B-1, B-5, B-6 West,
Building 371, and C-1. (Files 104.5152, 104.1165, 104.5154, 104.0675, 104.0676, 104.5167,
104.0674, 104.1691, 104.1343).

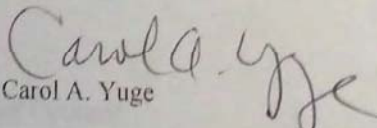

Dear Mr. Dickerson:

Lockheed Martin Corporation is in receipt of the subject letters which request that a chemical use questionnaire be returned for each of the nine properties by December 15, 2000. Lockheed Martin Corporation understands that the Water Board has subsequently given all recipients of the chemical use questionnaire an extension to January 5, 2001. Many of the questions seek historical information and, as you know, Lockheed Martin has not operated in Burbank for 10 years. It will take more than the time allotted to respond to the questionnaire, especially since there are questions that request information on all inorganic compounds that have been used in the past.

Lockheed Martin Corporation requests that an extension to February 28, 2000, be granted for submittal of this information.

In the future, please send all correspondence to Gene Matsushita at the same address. Thank you for your cooperation.

Sincerely,

Carol A. Yuge

Dear Ms. Yuge:

REQUEST FOR EXTENSION, REQUIREMENT FOR A TECHNICAL REPORT, LOCKHEED MARTIN PLANTS A-1 NORTH (FILE NO. 104.5152), BUILDING 85 (FILE NO. 104.1165), A-1 EAST (FILE NO. 104.5154), A-1 SOUTH (FILE NO. 104.0675), B-1 (FILE NO. 104.0676), B-5 (FILE NO. 104.5167), B-6 WEST (FILE NO. 104.0674), BUILDING 371 COMPLEX (FILE NO. 104.1691) AND C-1 (FILE NO. 104.1343) BURBANK, CALIFORNIA

We have received your December 4, 2000 letter requesting an extension from January 5, 2001 to February 28, 2001 for the submittal of the chemical use questionnaires for the subject facilities as specified in our November 29, 2000 letter to Lockheed Martin. You indicated that the additional time is needed to provide the requested information.

We are unable to grant you the extension to February 28, 2001. However, we are providing you until January 15, 2001 to submit the requested information.

If you have any questions, please call Alex Carlos at (213) 576-6726.

Sincerely,

Dennis A. Dickerson
Executive Officer

Subject: Transmittal of Chromium Investigation Chemical Storage and Use Questionnaires

Dear Mr. Oriola:

In response to the Los Angeles – California Regional Water Quality Control Board's (LA-CRWQCB) letters dated November 29, 2000, Lockheed Martin Corporation has completed Chemical Storage and Use Questionnaire forms required for nine different properties currently or previously owned by Lockheed Martin Corporation (LMC). Please note, LMC has not conducted operations at these properties for a number of years. The questionnaires were completed based on available historical information in accordance with the due date provided by the LA-CRWQCB. The completed questionnaires are attached for the following prop

- (1) Plant A-1 North located at 2555 N. Hollywood Way, Burbank
- (2) Plant A-1 South located at 2311 N. Hollywood Way, Burbank
- (3) Plant A-1 East located at 3401 W. Empire Avenue, Burbank
- (4) Plant B-1 located at 1705 Victory Place, Burbank
- (5) Former Plant B-5 located at 4207 Empire Avenue, Burbank
- (6) Plant B-6 West located at 2801 N. Hollywood Way, Burbank
- (7) Plant B-6 East – Building 371 located at 2960 N. Hollywood Way,
- (8) Plant C-1 located at 10720 Sherman Way, Burbank
- (9) Building 85, Lots 16, and 16A located at 3220 W. Thornton, Burbank

Lockheed Martin is submitting the nine completed questionnaires in advance of the January 15, 2001 due date specified in the LA-CRWQCB's letter dated December 21, 2000.

CHEMICAL STORAGE AND USE QUESTIONNAIRE
CHROMIUM INVESTIGATION

I. Facility information

II. Company name: Plant A-1 South

1. Company address: 2311 North Hollywood Way Unit No. _____

2. City: Burbank Zip code: 91505 Phone: (818) 847-0197

3. Standard Industrial Classification (SIC): _____

4. Brief description of business:

The plant has been demolished, and the property has been redeveloped.

Historically, Plant A-1 South was used for offices, vehicle maintenance, and parking.

5. EPA Generator Number: CAD008255283 Years in business at this location: 1969 to 1995

6. Answer the following questions relative to **present** operations:

A. Do you do plating or manufacture circuit boards? _____ Yes X No
If yes, please explain:

B. Do you have plating or anodizing tanks? _____ Yes X No

C. Do you perform any metal work? _____ Yes X No

D. Do you have a clarifier, sump, tank or other holding tanks for waste water? _____ Yes X No

E. Do you have an industrial waste permit for sewer discharge? _____ Yes X No

F. Do you store chemicals at this location? _____ Yes X No

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

2008 JUN 19 AM 07

RECEIVED

G. Has any soil, waste water and/or groundwater investigations been conducted on the property? Yes No

If so, by what state or local agency? Los Angeles – California Regional Water Quality Control Board

8. Answer the following questions regarding **past** operations:

A. Do you know if plating operations existed at this location? Yes No

If yes, please explain:

B. Did you once have plating or anodizing tanks? Yes No

C. Did you perform any metal work? Yes No

D. Did you have a clarifier, sump, tank or other holding tanks for waste water? Yes No

E. Did you have an industrial waste permit for sewer discharge? Yes No

F. Did you have a drum storage area? Yes No

G. Have any soil, waste water and/or groundwater investigations been conducted on the property? Yes No

9. Name(s) of former tenants(s), dates of operation and type of business (provide a separate sheet if necessary).

Company Name	Type of Business	Dates of Operation at the Site
None		

10. List all processes in which metallic compounds (derived from the elements listed in Table 1) are used.

The plant has been demolished. Lockheed Martin conducts no operations at this property.

II. Property owner information

1. Name of current property owner: Gort, Ltd. - Fry Electronics
2. Mailing address of property owner: 340 Portage Avenue
3. City: Palo Alto Zip code: 94306 Phone: () _____

4. Prior property owner(s) and the dates of their ownership

Property Owner	Dates of Ownership	
	From	To
Unimart (portion of property)	1962	1986
American Hospital Supply (portion of property)	1962	1969
Lockheed	1969	December 1995

III. Waste Management

1. What are the sources of industrial waste from the site? (Identify sources by process, composition of wastes generated and approximate quantity disposed of monthly).
Lockheed Martin generates no waste at this property.

IV. Sewer Information

1. Industrial Septic tank Municipal Cesspool (Property is currently not occupied by Lockheed)
2. Was a different sewer system used in the past? Yes No
- If yes, specify type Sanitary sewer system

V. Chemical Storage and Use

Complete the following sections for all chemicals (inorganic compounds only) in current use or that have been used in the past. Add separate sheets to complete your listing.

1. Chemical name: Chromate Algicide - located at former Building 76 Cooling Towers
2. Common/Trade name: _____ Quantity stored: Unknown
3. Storage method: Underground tank Drums
 Unknown Above ground tank Other (specify)
4. Waste disposal: Sewered Onsite recycling
 Not Applicable Hauled Offsite recycling
5. Is the waste treated prior to disposal? Not Applicable Yes No
If yes, specify treatment method: _____
6. Is the waste stored prior to disposal? Not Applicable Yes No
7. Is manifest documentation available for designated waste streams? Not Applicable Yes No

-
1. Chemical name: Sulfuric Acid Descaler - located at former Building 76 Cooling Towers
2. Common/Trade name: _____ Quantity stored: Unknown
3. Storage method: Underground tank Drums
 Unknown Above ground tank Other (specify)
4. Waste disposal: Sewered Onsite recycling
 Not Applicable Hauled Offsite recycling

EVALUATION AND ABANDONMENT, FINAL REPORT**

Dear Mr. Sakaida;

Please find enclosed two copies of the Lockheed Burbank Facilities, Historic Well Evaluation and Abandonment, Final Report, prepared by Krieger & Stewart, Inc. This report documents the evaluation and abandonment of nine historical wells in compliance with California Department of Water Resources Bulletin 74-81 and the Krieger & Stewart Work Plan for Historic Well Evaluation and Well Abandonment dated June 14, 1994.

Please contact Carol Yuge at (818) 847-0197 should you have any comments or questions.

Sincerely,

WORK PLAN FOR HISTORIC WELL EVALUATION AND ABANDONMENT - LOCKHEED
BURBANK FACILITIES

We have reviewed the subject work plan dated June 14, 1994, which was prepared by Krieger & Stewart, Inc.

We have no objection to your implementing the work plan provided that the well evaluation and abandonment activities are conducted as proposed. Please provide this Regional Board a copy of the report documenting all field work related to this activity.

Please call Alex P. Carlos at (213) 266-7583 if you have any questions.

**SUBJECT: SUBMITTAL OF WORK PLAN FOR HISTORIC WELL EVALUATION AND ABANDONMENT,
LOCKHEED FACILITIES, BURBANK, CALIFORNIA**

Dear Mr. Sakaida;

Please find enclosed two copies of the Work Plan for Historic Well Evaluation and Abandonment, Lockheed Facilities, Burbank, California. The wells covered in this plan will be abandoned in compliance with California Department of Water Resources Bulletin 74-81. This work will commence on or about June 27, 1994.

Please contact Carol Yuge at (818) 847-0197 should you have any comments or questions.

Sincerely,

R.N. Helgerson
Program Manager

Monterey Park, California 91754-2156

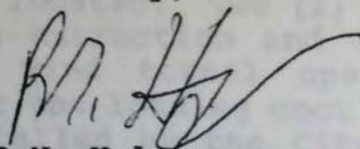

Dear Ms. Stone:

In accordance with RWQCB desires, Lockheed is taking this opportunity to inform you that as a result of a routine geophysical survey of Plant A-1 South, three anomalous areas were reported. One of these areas corresponds to an abandoned water well. The other two anomalies correspond to piping at the former Bldg. 76a location and a buried concrete structure north of Bldg. 81.

Lockheed will begin investigating the two anomalies, located north of Bldg. 81 and north of former Bldg. 76a, next week. The piping at the former Bldg 76a location will be investigated on Monday, November 9, 1992. The anomaly north of Bldg. 81 will be investigated on Wednesday, November 11, 1992.

Should you have any comments or questions, please contact Mr. Joe Phillips at (818) 847-0789.

Sincerely,

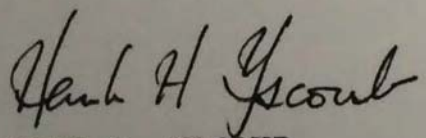

R.N. Helgerson
Project Manager

- 2. Wells will be prioritized based upon location and known groundwater quality impacts in the areas and evaluated.
- 3. Each well will be evaluated as follows:
 - A. Video log of each well will be completed to determine screen depths, and current structural integrity.
 - B. A temperature log will be completed to aid in evaluating any potential cross flow connections which may be acting as a conduit.
 - C. Any pumps associated with wells will be disconnected and removed.
 - D. Prepare a plan for abandonment of wells as needed. The feasibility of obtaining groundwater quality samples from each well must be evaluated prior to abandonment. An evaluation will be made to determine whether any of these wells could potentially be used for ongoing hydrogeologic assessment and/or water quality monitoring points.

Your report and workplan to address all the items listed above is due to this Regional Board by April 16, 1990. If you have any questions concerning this matter, please contact me at (213) 266-7512 or Mr. David Bacharowski at (213) 266-7539.

Lockheed Corp. Plant B1/A1 (818) 847-0789	FILE NO: 87-161
---	--------------------

OF COMMUNICATION:
About 6-8 months ago I questioned Mr. Dickey of LAASC regarding wells at LAASC that were used in the past for injection, and provided him with well numbers for 10 such locations at their Burbank facilities.

Mr. Steve Dickey called to inform me of their status regarding these wells as follows:

1) Plant B1 Bldg 150 - an extraction/injection well pair found and appears to be in operation recently. Well pair used to extract g.w. used for Wind Tunnel operations and then injected. System not in use now, pump power has been disconnected.

2) This well may be hooked to Burbank water supply and then ~~was~~ injected after use since 1979. Additional details being obtained.

One additional well under loading dock at Plant A

ACTIN TAKEN OR REQUIRED:
Bldg. 79. This well was purchased by LAASC from Barba PSD which was operated as a production well at one time

Discussions with Mr. Dubey proposed the following course of action.

- a) A survey will be completed to identify the location and current/past use of these wells (20).
- b) Wells will be prioritized based on location and known or potential impacts in the area.
- c) Each well will be evaluated as follows:
 1. Videology of each well to determine screen depth and current structural integrity.
 2. Temperature log will be completed to aid in evaluating and potential cross (connections) ^{flow} which may act as conduits.
 3. Any pumps associated with wells will be removed/disconnected.
 4. Prepare plan for abandonment of wells as needed. Evaluation to include potential use as monitoring points.

Recommendations

- 1) Send attached letter confirming telephone conversation and requesting formal course of action to address these wells.

PART 2

INTRODUCTION

FIGURES

1.0 INTRODUCTION

This Soil Remediation Workplan has been prepared for use in the remediation of the shallow soil located beneath and around the former Building 76A area of the Lockheed Plant A1 South, which is located in Burbank California. Figure 1 presents a vicinity map and schematic diagram of the A1 complex which includes Plant A1 North, A1 East and A1 South. Figure 2 presents a plot plan of the Plant A1 South site. Plant A1 South includes buildings 76 and 81, parking lots 11, 11A, 12 and 20, and the former Building 76A. Plant A1 South was decommissioned in the first quarter of 1992. All operating equipment and personnel have been removed.

1.10 Purpose and Objectives

LESAT has prepared this Soil Remediation Workplan for use in the excavation and disposal of soil which was found to contain Tetrachlorethene (PCE), diesel fuel and oil or hydraulic fluid. The building and all underground structures were removed from the site during site demolition in 1992. The PCE affected soil detected at Building 76A is present in the former Underground Storage Tank (USTs) area.

The locations of the USTs are shown on Figure 3. The affected areas (listed above) were discovered and characterized by the Environmental Assessment (McLaren, 1992), the completion of soil borings in the vicinity of the former Building 76A (ASL Consulting Engineers, 1992) and by the completion of a soil vapor survey (ASL Consulting Engineers, 1993). The data generated during these investigations was used to prepare the site for remediation. The proposed soil remediation will consist of excavating the affected soil and transporting the soil to an appropriate disposal site. A report documenting the results of the soil remediation will be prepared and submitted to the Los Angeles Region of the California Regional Water Quality Control Board (CRWQCB).

2.0 FACILITY BACKGROUND

Lockheed Plant A-1 South is rectangular in shape and consists of a 19.6 acre parcel of land. The parcel is bounded by Hollywood Way on the east, Vanowen Street on the north, Valhalla Avenue on the south and a cemetery on the west (see Figure 1). The parcel was used for agricultural purposes and as a dairy farm until the 1940s, at which time Lockheed began using portions of the property to support their Burbank aircraft manufacturing facilities. From the 1940s through the 1960s the land had various uses including parking for Lockheed employees, small restaurants bordering Vanowen Street, and an auto salvage yard.

2.10 Site Description

Asphalt or concrete paving covers approximately 75 percent of the parcel surface. An additional 17 percent is covered by Building 76 (owned by Lockheed) and Building 81(owned by others). The remaining eight percent of the parcel was occupied by Building 76A (owned by Lockheed) and the associated parking area (see Figure 2). The entire site, including Buildings 76, 81 and parking lots 11, 11A, 12, 20 and the Building 76A area are enclosed by a chain-link fence. Lockheed presently owns the eastern 60 percent of the site. Access to the Lockheed owned portion of the parcel is limited to authorized personnel.

The north-eastern corner of Plant A1 South which includes the location of the former building 76A and the surrounding area is the focus of this remediation (see Figure 2 and Figure 3). The former Building 76A site area is not surfaced at this time. A soil sealer is applied periodically to control weed growth and dust. The site surface has a slight gradient towards the southwest. A groundwater monitoring well and a storm drain are present in the north-eastern corner of the site near the intersection of Vanowen Street and Hollywood Way, as shown on Figure 3.

2.11 Building 76A

Building 76A was operated as an auto service center and was used by Lockheed for fleet vehicle maintenance and fueling. This facility included USTs, dispenser islands and piping, below-grade hydraulic lifts, clarifiers, and above ground storage areas for hazardous materials. Figure 3 presents a site plot plan with the details of the former Building 76A area. The eastern-most UST was used to store PCE and served as a central supply point for Lockheed's other plants in Burbank. The PCE was dispensed to tanker trucks and transported to the various Lockheed Burbank plants.

2.20 Background

The demolition of Building 76A was conducted during February-April 1992, demolition activities

included removal of the four USTs and associated piping and dispensers; removal of the building, floor slab, and foundations; and removal of all below grade improvements including hydraulic lifts, clarifiers, storm drains, and sewers. During the demolition process, areas of stained soil were noted and soil samples were collected to determine if elevated concentrations of regulated chemicals were present. Shallow stained soil was found in the western portion of Building 76A and around the USTs, piping, and dispenser islands. Affected soil excavated during the UST removals and building demolition was sent off-site for disposal. A report on the demolition monitoring and soil sampling was prepared by ASL in April 1992.

A total of four, single walled, steel, 12,000 gallon underground storage tanks (USTs); one, 550 gallon, single walled, steel, used oil tank; one concrete 1600 gallon clarifier; and seven dispensers were removed from the site. The two western-most 12,000 gallon USTs contained unleaded fuel (see Figure 3), the third 12,000 gallon UST (central) contained diesel fuel and the fourth contained PCE. The fuel and PCE UST's were pressure tested in August of 1985 and found to be tight. Table 1 (below) presents a summary of the liquid storage tanks that were present at Building 76A.

TABLE 1
List of Former Building 76A
Underground Storage Tanks (USTs)
and Clarifiers:

<u>Id</u>	<u>Type/Capacity</u>	<u>Use/Contents</u>	<u>Status/Yr</u>
A1-F8	UST/12,000 Gal. Steel	Unleaded Fuel	Removed/92
A1-F9	UST/12,000 Gal. Steel	Unleaded Fuel	Removed/92
A1-F10	UST/12,000 Gal. Steel	Diesel Fuel	Removed/92
A1-N	UST/12,000 Gal. Steel	Tetrachloroethene	Removed/92
A1-U	UST/550 Gal. Steel	Used Oil	Removed/85
A1-V	Clarifier/1,600 Gal. Conc.	Steam Clean Water	Removed/92*

* Clarifier A1-V was installed in 1988.

The tanks were removed under the supervision of Inspector Joseph Solares of the City of Burbank Fire Department (CBFD). Inspector Solares directed the collection of 21 soil samples from beneath the removed tanks, associated product lines, and dispenser islands. Eight soil samples were collected from beneath the USTs, nine soil samples were collected from beneath the product piping, and four soil samples were collected from beneath the dispenser islands. Soil samples were collected from depths approximately 5 feet below the tank invert and the product piping. Appendix B, Part 1 presents a summary of the laboratory analytical results from the UST removal and soil sampling and a plot plan showing the soil sample collection locations.

Based on the laboratory analytical results of the soil samples collected, the soil in the vicinity of the

line from the PCE tank and beneath the dispenser were found to contain PCE. Diesel fuel was also found to be present beneath the dispenser area with the PCE. In addition to the USTs, ten hydraulically operated vehicle lifts were removed from the inside of Building 76A. Hydraulic fluid or oil was found to be present in the soil beneath and around the former vehicle lifts.

Imported soil backfill was placed into the UST excavation on February 28, and 29, 1992 and compacted to 90 percent relative compaction.

2.30 Regional Geology

Plant A1 South is located south and west of the Verdugo Mountains within the southeastern San Fernando Valley. The San Fernando Valley is an alluvial basin that is approximately 23 miles long and 12 miles wide and contains up to 1000 vertical feet of alluvium material. The alluvium includes [from youngest (top) to oldest (bottom)]:

- Younger Alluvium (0 to 10,000 years old),
- Older Alluvium (10,000 to 1 million years old), and the
- Saugus Formation (1 to 2 million years old)(Oakeshott, 1958; Johnson et. al., 1973 as reported by ASL, 1992).

The Saugus Formation unconformably overlies an older Tertiary Geologic Age (1.6 to 66.4 million year old) marine sediment.

The Younger Alluvium is composed primarily of an accumulation of boulders, coarse to fine gravel and sand which was deposited as coalescing alluvial fans west of the Verdugo Mountains. The Older Alluvium mainly consists of coarse unconsolidated sand and gravel with minor amounts of clay [State Water Resources Control Board (SWRCB), 1962 as reported by ASL, 1992].

The Verdugo Fault extends under the alluvium between the Verdugo Hills and the Pacoima Hills, and lies approximately 1.1 miles northeast of Plant A1 South. This fault displaces the pre-Cretaceous Geologic Age (greater than 66.4 million years old) granitic and metamorphic rock basement complex.

2.31 Regional Hydrogeology

The Plant A1 Complex is located within the San Fernando Groundwater Basin (SWRCB, 1962 as reported by ASL, 1992). The depth to groundwater was reported to be approximately 180 feet below the ground surface (LESAT, 1994).

According to the LESAT Monthly Groundwater Elevation Data Reports, the groundwater beneath

the complex has risen approximately 20 feet since March of 1994 and has a gradient of approximately 0.002 feet per foot towards the southeast (LESAT, 1994; Hargis & Associates, 1992).

2.32 Local Subsurface Conditions

The soil beneath the site primarily consists of fill soil from the surface of the site to a depth of between five and ten feet. The fill reportedly consists of silty sand [Unified Soil Classification System, (USCS) classification SM]. (A copy of the USCS is presented in Appendix C.) Compacted fill is present in the former UST zone to a depth of 13 to 18 feet. The remainder of the soil beneath the site is reported to be composed of medium dense to dense, slightly moist to moist, fine to medium or coarse sand with trace silt (SW,SP). Cobbles or boulders have been reported to be present in the subsurface throughout the Burbank California area. Known groundwater is well below the anticipated excavation depth and perched groundwater has not been reported.

2.40 Previous Environmental Site Investigations

Previous environmental site investigations performed at the site include the following:

- ▶ Underground Tank Leak Detection Investigation (Gregg and Associates, 1985),
- ▶ Preliminary Site Assessment; Tank A1-F8, A1-F9 and A1-N, Gasoline Station, Plant A1, Lockheed Aeronautical Systems Company, Burbank California (ENSR, 1990),
- ▶ Tank Closure Report, Plant A1 South, 2311 North Hollywood Way, Burbank California (Converse Environmental West, 1992),
- ▶ Environmental Assessment (McLaren/Hart, 1992),
- ▶ Site Investigation and Characterization (ASL, 1992),
- ▶ Soil-Gas Survey (ASL, 1993).

A summary of the significant findings from the previous environmental investigations are presented below.

2.41 Underground Leak Detection Investigation

Gregg and Associates (Gregg) performed an environmental subsurface soil investigation in the vicinity of the former Building 76A USTs in 1985 and 1986. The investigation included the drilling of 14 soil borings in the UST area and the installation of vapor monitoring wells. The borings ranged from 15 to 40 feet in depth and a total of 17 soil samples were collected from the soil borings and submitted to the laboratory. The samples were then analyzed for the presence of PCE. PCE was not detected in any of the soil samples submitted to the laboratory for analysis. A summary of the

laboratory analysis results are presented in Appendix B, Part 1. A summary of the sample locations and the laboratory analysis results for the PCE are presented in Table 2 of this report. The soil boring locations are shown on Figure 3.

2.42 Preliminary Site Assessment

ENSR Consulting and Engineering (ENSR) continued the subsurface soil investigation around the Building 76A USTs in December 1988 through June of 1989 (ENSR, 1990). This investigation included the installation of 14 additional soil borings in the vicinity of the four, 12,000 gallon fuel USTs. The laboratory analysis results included TPH, benzene, toluene, ethylbenzene, xylene, PCE, 4-methyl 2-pentanone and acetone. A total of 27 soil samples were collected from the soil borings and analyzed for the presence of PCE. PCE was detected in four of the soil samples collected, they were: boring EA1-4N (3 foot depth); EA1-5N (2.5 foot depth); EA1-6N (4 foot depth) and EA1-8N (5 foot depth). TPH, toluene and xylene were also detected in the sample recovered from boring EA1-6N at a depth of 4 feet. All four of the soil samples containing PCE were collected from the southwestern dispenser area (see Figure 3). Table 2 presents a summary of the laboratory analysis results for PCE generated during the investigation performed by Gregg and Associates (1985 and 1986) and the ENSR investigation (1988 and 1989). A summary of the laboratory analysis results from the Preliminary Site Assessment are presented in Appendix B, Part 2.

TPH by USEPA Method 8015-M
 Volatile Organic Constituents by USEPA Method 8240.

2.43 Tank Closure Report

Converse Environmental West (CEW) observed the excavation and removal of four 12,000 gallon USTs and the associated dispensers during late February, 1992. A total of eight soil samples were collected from below the former USTs, nine soil samples were collected from below the former piping and four soil samples collected from beneath the former dispenser. Table 3 presents a summary of the laboratory analysis results for the PCE detected. Appendix B, Part 3 presents copies of the laboratory analysis results from the CEW report (CEW, 1992)

2.44 Environmental Assessment

McLaren/Hart completed a Phase I Environmental Assessment (EA) of Plant A-1 South. The investigation involved a review of historical operating practices at the plant, interviews with employees, a site inspection, and aerial photo review. The purpose of the EA was to identify possible areas of environmental concern which might require further investigation. The EA report was submitted by McLaren/Hart in January, 1992 (McLaren/Hart, 1992).

The EA identified several areas of the plant, primarily in and around Building 76A, which were anticipated to contain elevated concentrations of hydrocarbons in the subsurface. The features in the Building 76A area such as underground tanks, piping, hydraulic lifts, clarifiers, etc. were identified as potential sources. In addition, the review of historical operating practice revealed that surface spills of fuels and PCE had occasionally occurred at the dispensing islands and near the eastern perimeter fence where a temporary above ground PCE holding tank had been located. These areas were targeted for further subsurface investigation.

2.45 Site Investigation and Characterization

Although investigation activities were performed prior to 1992 as part of Lockheed's UST compliance program, a comprehensive subsurface investigation had not been completed. Based on the information compiled in the EA and the observations from the demolition of Building 76A, a comprehensive subsurface investigation was performed in June 1992 by ASL Consulting Engineers (ASL). This investigation consisted of completing a total of 78 soil borings across the parcel. Fifty-eight of the borings were concentrated in the Building 76A area (ASL, 1992).

Forty-eight of the soil borings were completed to depths of 10 or 20 feet. Nine borings were completed to a total depth of 35 to 40 feet and one boring was completed to a depth of 80 feet. A total of 344 soil samples were collected from the 78 borings. Two-hundred and eight of the soil samples were collected from the 58 soil borings installed in the Building 76A area from a depth of 5 feet or below. A summary of the soil sample analysis results are presented in Appendix B (Part 4). Figure 4 presents the locations of soil borings completed in the Building 76A area during the 1992 investigation.

Soil samples were analyzed for the presence of metals, polychlorinated biphenyls (PCBs), Total Petroleum Hydrocarbons (TPH), and for Volatile Organic Compounds (VOCs), including PCE. The principal chemicals identified in the soil samples were diesel fuel, oil, and PCE. TPH (fuels and oils) was generally confined to the shallow subsurface soil above a depth of 10 feet in the western portion of Building 76A. Only one boring, B76A-46, showed significant concentrations of TPH at depths greater than 10 feet. In this boring, located at one of the dispenser islands, petroleum hydrocarbons were found in conjunction with PCE to a depth of 25 feet.

Elevated VOC concentrations were generally limited to the shallow subsurface soil in the eastern portion of Building 76A which included the underground storage tanks, piping and dispensing systems. The areas of the plant which contained elevated concentrations of PCE generally conformed with the areas where product dispensing, storage, and surface spills had been reported.

Following the demolition of Building 76A and the completion of the subsurface soil investigation, the CRWQCB requested Lockheed to complete a soil gas survey at the plant to ensure that no

source areas had escaped detection during the previous investigation and to confirm the results of the site characterization investigation. A summary of the soil-gas survey is presented in section 2.46 of this report.

2.46 Soil-Gas Survey

A total of 181 soil-gas samples were collected from 159 sampling locations across the parcel. Soil-gas samples were collected from a depth of five feet Below the Ground Surface (BGS) between September 23 and October 7, 1993. A soil-gas probe grid spacing of 100 feet was used across the majority of the Plant A1 South parcel. Soil-gas probes located in the Building 76A area were placed at 20 foot intervals.

One-hundred and nine of the soil-gas probes were completed in the Building 76A area. Eighty nine soil-gas samples were collected from a depth of five feet. The data collected from a depth of five feet was reviewed with a representative of the CRWQCB and the locations for 20 additional soil-gas samples to be collected from a depth of between 10 to 25 feet BGS were selected. Soil-gas samples collected in the former UST vicinity were collected from a depth of 25 feet BGS and the remainder of the soil-gas samples were collected at depths of between 10 and 20 feet. Figure 2 presents the locations of the soil gas probes across the entire parcel, and Figure 4 presents the locations of the soil-gas probes completed in the Building 76A area.

The soil-gas samples were analyzed for the standard list of 22 chlorinated and aromatic compounds required by the CRWQCB. Appendix B (Part 5, Table 4-5), presents a summary of the concentrations of analities detected in the soil-gas survey.

Five Foot Depth

Twelve of the soil-gas samples collected from a depth of five feet, in the Building 76A area were found to contain concentrations of PCE in excess of 0.1 milligrams per liter in air (mg/l-air). They are probes numbered 104, 105, 113, 114, 115, 126, 127, 128, 140, 141, 142 and 150. Only one of these soil-gas samples was found to contain concentrations of PCE in excess of 1.0 mg/l-air. The probe location which was found to contain concentrations of PCE in excess of 1.0 mg/l-air was probe number 114 (2.2 mg/l-air). This sample was collected from the vicinity of the southern end of the western dispenser islands, adjacent to boring B76A-48. Figure 4 presents the soil-gas probe locations.

Twenty Foot Depth

Five of the above listed soil-gas probes (Probes Numbered 105, 114, 115, 127 and 150) were extended to a depth of 20 feet and re-sampled. None of the soil-gas samples collected from a depth

of 20 feet were found to contain concentrations of PCE in excess of 1.0 mg/l-air.

Figure 5 presents the locations of the soil-gas probes and the concentrations of PCE detected in the soil-gas samples collected from a depth of 20 feet. Table 4 below presents a summary of the concentrations of PCE detected in the soil-gas probes and the soil borings.

TABLE 4
Summary of Selected PCE Concentrations

- * Concentrations reported in mg/l-air by CRWQCB WIP method (Modified USEPA method 8010/8020)
- ** Concentrations reported in mg/kg (soil), by USEPA Test Method 8010-8020
- NA Indicates Not Analyzed
- ND Indicates Not Detected at the detection limits

All measurements equal to or in excess of 1.0 mg/l-air or 1.0 mg/kg are printed in normal bold lettering
Sample locations containing concentrations of PCE which increased with depth are printed in bold italic lettering.

As can be seen from Table 4 above, the concentrations of PCE that exceeded 1.0 mg/l-air or 1.0 mg/kg are printed in bold type (probe number 114 and 127 at a depth of five feet). Concentrations that were found to increase with depth, (B76A-46, B76A-48 and B76A-58) are marked in bold italics. Of the 48 analyses presented in Table 4 above, only three exceeded 1.0 mg/l-air or mg/kg in soil.

2.50 Previous Geotechnical Study

A preliminary geotechnical study was performed in the Building 76A area by Converse Consultants West (CCW) in January, 1992. The study consisted of the excavation of four test pits to depths of ten feet. The soil lithology and shallow structure was described in accordance with the Unified Soil Classification System (USCS) as the excavations advanced. Relatively undisturbed soil samples were collected from two of the test pits in ring type samplers for consolidation tests and direct shear tests. Bulk soil samples were also collected for grain size analysis and compaction curves (maximum density/optimum moisture test). Figure 3 presents the locations of the excavations. The excavations were backfilled and compacted with the backhoe bucket upon completion.

Trench number 2 was located near the eastern end of the former Building 76A. The soil samples collected from the pit were described as a gray, fine sand with some medium grains (SP according to the USCS classification), slightly silty, with lenses of sandy silt (ML). Soil moisture was tested and determined to be four percent moisture in the soil sample collected from Trench 2.

3.0 AREAS OF CONCERN

LESAT met with the CRWQCB, Los Angeles Region on December 28, 1995 to discuss the soil clean-up goals for the Plant A1 South, Building 76A area. During the discussion, examples from the Interim Guidelines for Remediation of VOC Impacted Sites (CRWQCB, 1994) were reviewed as well as information specific to the Building 76A area. The site information discussed included the depth to the groundwater, the current condition of the groundwater and the Lockheed groundwater recovery operation (the Burbank Operable Unit) which will be operating downgradient (southeast) of Plant A1 South.

Groundwater is present beneath the Plant A1 South area at a depth of approximately 180 feet below the ground surface. PCE has been detected in the groundwater beneath the Plant A1 South area in concentrations of up to 1,400 $\mu\text{g/L}$ in well number A1-CW-9 (April 1994, LESAT, 1994). The Burbank Operable Unit (BOU) will be recovering and treating up to 9,000 gallons per minute of groundwater from the uppermost aquifer beneath the site. The groundwater beneath the Plant A1 South area has been modeled and is predicted to be within the capture zone of the BOU.

After considering the site specific factors mentioned above, the CRWQCB and LESAT agreed upon 0.150 mg/kg in soil as the target for meeting the remediation objectives for the planned soil excavation at the Plant A1 South, Building 76A site.

Areas where soil samples and soil-gas samples were collected from near the site surface (depth of one foot or less) were not considered for remediation due to the following factors:

- ▶ The elevated soil-gas readings which may be the result of the accumulation of volatile hydrocarbons under the former asphalt surface,
- ▶ The disruption and movement of the shallow soil during site demolition and grading,
- ▶ The possibility of broken asphalt contaminating the soil samples collected at a depth of one foot and indicating false results, and
- ▶ The probability of natural degradation or diffusion of the hydrocarbons detected in the shallow soil,

Figure 5 presents a detail map of the Building 76A dispenser area. The environmental assessments and evaluations performed at the site yielded the following areas of concern for the site.

- ▶ Soil in the vicinity of the former southwestern fuel dispensers was found to contain elevated concentrations of TPH by California Environmental Protection Agency (Cal-EPA) test method 8015 modified for Diesel fuel, Total Recoverable Petroleum Hydrocarbons (TRPH) by United States Environmental Protection Agency (USEPA) test method 418.1 and PCE by USEPA test method 8010/8020. Trichloroethene (TCE) was found to be present in conjunction with the PCE. [Tank removal samples D-4 (5 foot-1,600 mg/kg-PCE), PL-4 (5 foot-400 mg/kg-TRPH) and PL-7 (5 foot-450 mg/kg-TRPH). Soil borings B76A-46 (5 foot-44 mg/kg-PCE, 10 foot-260 mg/kg-PCE, 15 foot-330 mg/kg-PCE, 20 foot-160 mg/kg-PCE and 25 foot-73 mg/kg-PCE)]. This area has been designated proposed excavation number 1.
- ▶ Soil in the vicinity of the former used oil tank located south of the former Building 76A contained elevated concentrations of TRPH and PCE. (Soil borings B76A-17-5 foot-130 mg/kg-TRPH and 1.1 mg/kg PCE.) This area has been designated as proposed excavation number 2.
- ▶ Soil in the vicinity of the former vehicle lifts specifically, near soil boring B76A-34 contained elevated concentrations of PCE. (2.5 mg/kg PCE at a depth of ten feet and non-detect at a depth of fifteen feet.) This area has been designated as proposed excavation number 3.

3.10 Estimated Volume of PCE Affected Soil

The area beneath the southwestern dispenser was found to contain the greatest concentrations of PCE. LESAT estimated the vertical and lateral extent of the PCE affected soil based on the previous environmental soil investigations. For the purpose of this evaluation, concentric cylinders were selected to represent the PCE affected soil beneath the dispenser. Figure 6 presents a schematic cross sectional diagram showing the PCE affected soil and the cylinders. The cylinders will present the most conservative estimate of the volume of affected soil by over-estimating the volume of

affected soil containing the more elevated concentrations of PCE.

As can be seen on Figure 6, the cylinders were estimated to extend from the surface of the site to a maximum depth of 28 feet. The soil contained within each cylinder conservatively estimated to be at or above the average concentration of the PCE detected in the soil samples. For example; the soil present between the 200 and 300 mg/kg contours was all considered to be at a concentration of 250 mg/kg (200mg/kg + 300 mg/kg divided by 2 = 250 mg/kg). Table 5 below presents a summary of the data used to estimate the volume of PCE contained within the soil beneath the former dispenser.

Table 5
Estimated Volume of PCE Affected Soil
Plant A1 South, Building 76A
Former Dispenser Area

Hgt. (feet)	Radius (feet)	Volume* (Cu. ft)	Volume (Cu. yds)	Range** (mg/kg)	Avg. Conc.** (mg/kg)	PCE (pounds)	PCE (gallons)
6'	3'	197 ³	7.30 ³	300-400	350	6.90	0.51
12'	6'	1160 ³	43 ³	200-300	250	29.0	2.14
18'	7'	1414 ³	52.4 ³	100-200	150	21.21	1.57
28'	10'	6025 ³	223 ³	10-100	50	30.12	2.22
28'	20'	26,390 ³	977 ³	1-10	5	13.20	0.97
TOTAL			1302.7³			100.43	7.41

* The volume of soil calculation depicted above is calculated by using the formula $\pi r^2 h$ (the formula for a cylinder) and then subtracting the volume of the soil which contains the greater concentration of PCE (ie. subtracting the inner cylinder from the outer cylinder)

** Range and Average Concentrations for PCE are reported in milligrams per kilogram (mg/kg)
One gallon of PCE weighs 13.54 pounds.

The estimated volume of PCE was calculated by using the following formula:

$$\frac{\text{Soil Density} \times \text{Average Conc. of PCE} \times \text{Cubic feet of Affected Soil}}{1,000,000}$$

ASSUMPTIONS

The soil density is estimated to be approximately 100 pounds per cubic foot.
The average concentration of PCE is reported in mg/kg.
The cubic feet of affected soil is estimated from cylinders (see Figure 6).

3.20 Characteristics of PCE Affected Soil

Based on the soil description provided in the previous environmental investigations and the geotechnical study, the characteristics of the shallow soil beneath the site are anticipated to be slightly moist to moist, fine to medium sand with silt. Sections 3.21 and 3.22 will present the estimated soil porosity and will discuss the ability of the soil to retain or transmit fluids.

PART 1
PART 2
PART 3

3.21 Porosity

The porosity of soil (N) is equal to the volume of the pore space in the soil divided by the volume of the bulk solid (Fletcher, G. D., 1969, pg. 67). The average porosity of the unconsolidated silty sand present beneath the site to a depth of approximately 80 feet is estimated to be between 25 percent (less permeable) and 40 percent (more permeable).

3.22 Specific Retention and Specific Yield

The Specific Retention (SR) of a soil is a number that expresses the percentage of water that the soil can retain against gravity drainage, to the total volume of the soil. The Specific Yield (SY) of the soil is the percentage of water that exceeds the SR. Soil porosity can be expressed as being equal to the specific retention plus the specific yield of the soil ($N = SR + SY$).

As presented above, the porosity of the soil beneath the site can be conservatively estimated to be approximately 40 percent. The SY for a medium sand is estimated to be between 10 percent (less fluid released) and 30 percent (more fluid released) (Fletcher, G. D., 1969, pg. 67). For the purpose of this evaluation, the more conservative SY value of 30 percent will be used. By using the greater value for permeability (40% > 10%) and for the specific yield (30% > 10%), the most conservative calculation for that would allow the greatest possible migration for the PCE can be estimated. The formula for porosity can be re-arranged to calculate the SR for the soil ($SR = N - SY$).

$$SR = 40 - 30$$

$$SR = 10 \text{ percent}$$

Therefore, the maximum percentage of a fluid (such as water) that the soil can retain (SR) is approximately 10 percent. The in-place soil moisture was previously determined to be 4 percent (in the trenches tested during the geotechnical evaluation, see section 2.50 of this report), well below the maximum.

Soil samples collected from within the area affected by PCE were reported to range in moisture from slightly moist to moist. The moisture content in the soil which has been affected by PCE has been estimated to be from 4 to 8 percent, based on the soil moisture guide presented below:

<u>Soil Description</u>	<u>Moisture</u>
Dry	0 % - 2%
Slightly Moist	2 % - 5%
Moist	5 % - 8%
Very Moist	8 % - 10%
Wet (SR)	≥ 10%

The above listed moistures are based on the maximum density and optimum moisture tests performed by CEW (1992)

According to the SR and the estimated moisture content of the soil, the moisture of the soil containing the greatest concentrations of PCE detected in the soil does not currently exceed the SR for the soil.

The most elevated concentrations of PCE were detected in the soil samples collected at a depth of 5 feet during the tank pull 1,600 mg/kg. The concentrations of PCE detected at a depth of five feet during the subsequent soil investigation were 44 mg/kg, which was significantly reduced from the 1,600 mg/kg previously encountered. Soil samples collected from a depth of 10 and 15 feet in the subsequent soil investigation (soil borings) were found to contain 260 mg/kg (10 foot depth) and 330 mg/kg (15 foot depth). The concentrations of PCE were found to decrease with depth below a depth of 15 feet in borehole B76A-46. PCE was not detected in the soil samples collected from a depth of 30 or 35 feet

3.30 Risk Assessment and Soil Characterization

A very extensive risk assessment was performed on the Lockheed B-1 site which is located approximately 0.75 miles east of the site at 1705 Victory Place, Burbank California. The risk assessment was performed by ICF Kaiser Engineers to provide Lockheed with a scientific evaluation of the anticipated health and environmental concerns for PCE in the shallow soil.

The risk assessment generally follows standard and customary practices as specified in the California Environmental Protection Agency (Cal EPA 1992a, 1993a) and the United States Environmental protection Agency (USEPA 1989a, 1991a and 1992b) guidelines for the performance of risk assessments (ICF Kaiser, 1994). The overall approach of the risk assessment was in accordance with the Reasonable Maximum Exposure (RME) approach as defined by the USEPA in 1989(a).

ICF Kaiser developed Health-Based Clean-up Goals (HBCG) for PCE in the vadose zone soil to protect groundwater. The goals were developed to ensure that the concentrations would not exceed the Cal EPA and USEPA Maximum Contaminant Levels (MCL). ICF Kaiser estimated the HBCG for PCE in soil to be 20 milligrams per kilogram for the shallow soil.

Although the HBCG prepared for the nearby Lockheed B-1 site allows for 20 mg/kg of PCE to remain in the soil, LESAT has agreed to remove the soil in the former Building 76A area containing PCE in excess of 0.150 mg/kg from the shallow vadose zone soil. The removal of the shallow affected soil will ensure worker safety when the site is re-developed. In general, most trenches which may be constructed at the site in the future, are not anticipated to extend below a depth of 20 feet. Lockheed proposes to remediate the soil containing concentrations of PCE in excess of 0.150 mg/kg to a depth of 30 feet.

3.40 PCE Characteristics

Tetrachloroethene (PCE) is a chlorinated molecule composed of two carbon atoms and four chlorine atoms. The molecule is volatile as evidenced by the relatively high vapor pressure exerted by the compound under atmospheric conditions. A summary of PCE characteristics are presented below:

Common Names:

Tetrachloroethene, Tetrachloroethylene, PCE
Perchloroethylene, Perc, Perclene

- ▶ Relatively non-flammable
- ▶ Volatile; vapor pressure = 14 millimeters of mercury (mm) at 20° C (benzene = 75 mm)
- ▶ Solubility in water = 0.04 parts per 100 parts of solvent (benzene = 0.172 parts per 100)
- ▶ Density greater than water (1.6230)
- ▶ Molecular weight: 165.83 g/gmole

PCE is a refined hydrocarbon and is generally 99.9% pure when purchased. The PCE molecule will break down or degrade into Trichloroethene (TCE) which can then break down into 1,2 Dichloroethene (1,2 DCE). The ratio of PCE to TCE and subsequent breakdown products can be used to estimate the relative age or degradation of the original product. A summary of the PCE/TCE ratio found in the soil samples collected from boring B-76A-46 is presented in Table 6 below:

Table 6
TCE to PCE Ratio
in Soil Samples Recovered from Boring B76A-46
Plant A1 South, Building 76A

Depth (ft)	PCE (mg/kg)	TCE (mg/kg)	Ratio
5	44.	ND	0%
10	260.	9.3	3.6%
15	330.	5.5	1.7%
20	160.	2.8	1.8%
25	73.	ND	0%
30	ND	ND	0%

The breakdown of PCE to TCE under anaerobic conditions has an estimated half life of approximately one half year to four and one half years. 1, 2 DCE, the breakdown product of TCE was not detected in the B76A - 46 samples. According to the ratio percentages calculated above, the PCE present at the site has not experienced significant natural degradation.

3.50 Summary of Previous Environmental Investigations

Six environmental investigations have been performed at the Lockheed Plant A1 South facility. Five of the investigations have included the installation of soil borings or soil vapor probes in the building 76A area. Table 7 below presents a summary of the borings, soil-gas probes and the samples collected during the investigations and Figure 5 presents the locations of the soil borings and probes.

Table 7

**Plant A1 South, Building 76A
Summary of Previous Environmental Investigations
and Laboratory Analysis Results for Soil Samples
Containing Concentrations of PCE Greater than 1.0 mg/kg and
Collected from a Depth of Greater Than 5 Feet**

<u>Investigation</u>	<u>Borings Installed</u>	<u>Probes Installed</u>	<u>Samples Collected</u>	<u>No. of Soil Samples with Greater than 1.0 mg/kg</u>
Gregg (1985-86)	14	0	19	0
ENSR (1988-89)	14	0	27	3
CEW (1992)	17	0	5	1
McLaren (1992)	0	0	0	0
ASL (1992)	58	0	208	7
<u>ASL (1993)</u>	<u>0</u>	<u>109</u>	<u>109</u>	<u>1</u>
TOTAL	103	109	365	12

The soil samples listed below were found to contain concentrations of PCE in excess of 0.5 mg/kg or 0.5 mg/l-air.

- ▶ ENSR Affected Boring Numbers and Depth of Sample: EA1-4N, 3 foot; EA1-5N, 2.5 foot and EA1-6N, 4 foot.
- ▶ CEW Affected Boring Numbers and Depth of Sample: PL-3, 6 foot.
- ▶ ASL (1992) Affected Boring Numbers and Depth of Sample: B76A-17, 5 foot (affected) Non Detected (ND) at 10 foot; B76A-34, 10 foot (affected), ND at 15 foot; B76A-46, 5 foot (affected), 10 foot (affected), 15 foot (affected), 20 foot (affected) and 25 foot (affected), ND at 30 foot.
- ▶ ASL (1993) Affected Probe Number and Depth of Sample: 114, 5 foot.

Only 12 of the 365 soil samples which were submitted to the laboratory were found to contain concentrations of PCE in excess of 1.0 mg/kg. The measurements which exceeded 1.0 mg/kg or mg/l-air were found in seven of the soil borings (or sample locations).

APPENDIX B
PART 1

PART 2

PART 3

3.60 Proposed Excavation Limits

Tetrachloroethene (PCE) is present in the soil beneath the former dispenser (boring B76A-46) to a depth of approximately 27 feet. The soil samples recovered from depths of 30 and 35 feet were not found to contain detectable concentrations of PCE. LESAT will excavate the soil beneath the former dispenser to a maximum depth of 30 feet and remove the soil containing PCE in excess of 0.150 mg/kg. This remediation program will insure that the low concentrations of PCE that remains in place is well below saturation and continued migration is highly unlikely. The groundwater beneath the site is reported to be first encountered at a depth of approximately 180 feet, well below any remaining concentrations of PCE.

Table 8 below, presents a comparison of the estimated volume of affected soil in the former Building 76A area.

Table 8
Comparison of the
Estimated Volume of Affected Soil
Former Dispenser Area
Plant A1 South, Building 76A

<u>Hgt.</u> <u>(feet)</u>	<u>Radius</u> <u>(feet)</u>	<u>Volume</u> <u>(yards³)</u>	<u>Tons</u>	<u>Conc. Range</u> <u>(mg/kg^{**})</u>	<u>PCE</u> <u>(pounds)</u>	<u>PCE</u> <u>(gallons)</u>	<u>Est. Percent of</u> <u>Total Effort</u>
6'	3'	7.30 ³	10	300 - 350	6.90	0.51	0.4%
12'	6'	43 ³	65	200 - 300	29.0	2.14	2.8%
18'	7'	52.4 ³	80	100 - 200	21.21	1.57	5.7%
28'	10'	223 ³	335	10 - 100	30.12	2.22	18.2%
28'	20'	977 ³	1465	1 - 10	13.20	0.97	72.9%
TOTAL		1302.7³	1955		100.43	7.41	100.0%

* The volume of soil calculation depicted above is calculated by using the formula $\pi r^2 h$ (see Table 5)
 ** Concentration Range is reported in milligrams per kilogram
 One gallon of PCE weighs 13.54 pounds.

The total width necessary for the removal of the soil to a depth of 30 feet may be approximately 80 feet by 80 feet. The excavations will be designed by a soil engineer to provide safe working conditions. The soil engineer will evaluate the nearby streets and insure that the excavation process will not affect Vanowen Street or Hollywood Way.

4.0 SCOPE OF WORK

The proposed soil remediation will consist of excavating the affected soil and transporting the soil to an appropriate disposal site. A report documenting the results of the soil remediation will be prepared and submitted to the Los Angeles Region of the CRWQCB. The following tasks will be performed for this soil remediation:

- 4.10 Task 1 Preparation of a Site Safety and Health Plan
- 4.20 Task 2 Completion of Underground Obstruction Clearance
- 4.30 Task 3 Performance of Soil Characterization Field Study
- 4.40 Task 4 Construction of the Excavations for Soil Removal
- 4.50 Task 5 Collection of Verification Soil Samples
- 4.60 Task 6 Completion of Laboratory Analysis of Soil Samples
- 4.70 Task 7 Backfilling and Compaction of Excavations
- 4.80 Task 8 Handling and Disposal of Excavated Soil
- 4.90 Task 9 Preparation of a Report Documenting the Soil Remediation

4.10 Task 1 Preparation of a Site Safety and Health Plan

LESAT safety and health professionals will prepared a site specific Safety and Health Plan for use during the site investigation. The Safety and Health Plan will be prepared in accordance with 29 Code of Federal Regulations (CFR) 1910.120. A copy of the Safety and Health Plan for the Plant A1 South Soil Remediation will be forwarded to the CRWQCB approximately one week prior to initiation of the field activities. The plan will provide safety guidelines for personnel involved in performing the excavation of affected soil, verification sampling, backfilling and compaction of the excavations.

4.20 Task 2 Completion of Underground Obstruction Clearance

The suspected location of underground obstructions will be estimated, based on existing utility maps and information from previous studies. Actual or suspected utility locations will be marked for reference purposes. In addition, "Dig Alert" of southern California (telephone 800-422-4133) will be contacted prior to intrusive field investigations for assistance in locating known underground utility structures (e.g., gas, sewer, telephone, electrical, and water lines).

A Geophysical survey was completed during the site demolition (CEW, 1992). The site geophysical survey will be reviewed before intrusive field work begins.

4.30 Task 3A Performance of Soil Characterization Field Study

The previous site investigation and characterization performed by ASL (1992) detected the presence of elevated concentrations of PCE in the vicinity of the former southwestern dispenser (Soil borings B76A-46: 5 foot-44 mg/K-PCE, 10 foot-260 mg/K-PCE, 15 foot-330 mg/K-PCE, 20 foot-160 mg/K-PCE and 25 foot-73 mg/K-PCE).

LESAT proposes to install a total of four additional soil borings. The first soil boring (B76A-59) will be installed to a depth of 60 feet and will be located adjacent to Boring 76A-48 to further characterize the soil column. Soil samples will be collected beneath the known PCE affected soil and analyzed for the presence of PCE. The second soil boring (B76A-60) will be installed to a depth of 60 feet and will be located between the boring B76A-46 area and soil-gas probe number 127 to evaluate the soil condition south of the dispenser area. The third soil boring (B76A-61) will be installed to a depth of 30 feet and will be located in the B76A-34 area to confirm the PCE concentrations of 2.5 mg/kg PCE at a depth of ten feet and non-detect at a depth of 15 feet. The fourth soil boring will extend to a depth of 60 feet and will be installed adjacent to soil boring B76A-46. The purpose of the fourth soil boring will be to evaluate the condition of the soil beneath the dispenser. Figure 7 and 8 present the locations of the proposed soil borings.

Soil samples will be collected from the soil borings at five foot intervals, beginning at a depth of five feet BGS. The soil samples will be collected in accordance with the Drilling Soil Sampling and Sample Handling Guidelines presented in Appendix C.

Selected soil samples collected from the borings will be submitted to a analytical laboratory certified by the State of California. The soil sample analyses selected, will be based on field observations. The soil samples selected for analysis will be analyzed by some or all of the following analysis methods. Table 9 below presents the anticipated soil boring sample Schedule:

Table 9
Anticipated Soil Boring Sample Schedule
Building 76A, Former Dispenser Area

<u>Boring</u>	<u>Depth (ft)</u>	<u>Analyses</u>	<u>Location</u>
B76A-59	10', 20', 30', 40', 50', 60'	1, 2, 4 1, 2, 4	B76A-48 & SG-114
B76A-60	10', 20', 30', 40', 45', 50', 60'	1, 2 1, 2	SG-127
B76A-61	5', 10', 15', 20', 25'	1, 2, 3, 4, 5 Hold	B76A-34
B76A-62	10', 20', 30', 40', 50', 60'	1, 2 1, 2	B76A-46 & SG-105

- SG Location Indicates Soil-gas sample location. Soil-gas samples 1 through 158 were collected prior to December 1994. Refers to previous soil-gas or soil boring locations. Soil boring number 1 through 58 were completed prior to December 1994.
1. USEPA Method 8010 for the presence of VOC's.
 2. USEPA Method 8015 Modified for Diesel, for TPH in the diesel fuel range.
 3. USEPA Method 418.1 for the presence of TRPH.
 4. USEPA Methods 7421 for organic lead.
 5. USEPA Method 1311 extraction method for the Toxicity Characteristic Leaching Potential (TCLP) VOC analysis.

The soil samples will be accompanied by a chain-of-custody document from the time of sampling until the samples are received at the laboratory. The chain-of-custody document will list the personnel who handled the samples and will indicate the sample condition upon arrival at the laboratory.

The additional soil borings will be installed approximately 15 days prior to the initiation of the excavation of soil at the site. The results of the study will be included in the site remediation report which will be prepared following completion of the soil excavation, remediation and receipt of the supporting documents (see *Task 9* below).

The upper 25 feet of the soil borings will remain un-filled after completion of the soil sampling

ATTACHMENT D
 PART 1

 PART 2

 PART 3

and will be used as reference points during the soil excavation procedures. A temporary bentonite seal will be placed around the top of the boring and weighted plywood will be placed over the bentonite seal (to await excavation).

Soil cuttings generated during the soil characterization will be stockpiled on 10 mil visqueen type material and covered to await disposal. The soil cuttings will be disposed of with the soil removed during the soil remediation. Wash water and equipment rinsate generated during the soil characterization will be placed into DOT 1A1, (or equivalent) 55 gallon drums for temporary storage. The liquid will be sent to an appropriate recycling/disposal facility following receipt of the laboratory analysis results.

Task 3B Soil-Gas Survey

At the direction of the CRWQCB, additional soil-gas survey points will be added to the sampling protocol. A total of seven soil-gas probes (SG-159, SG-160, SG-161, SG-162, SG-163, SG-164 and SG-165) will be installed at the site. Four of the probes (SG-162, SG-163, SG-164 and SG-165) will be installed adjacent to and around soil boring B76A-46. The probes will be advanced to a depth of 30 feet before a soil-gas sample will be obtained. Soil-gas samples will be collected at depths of 30 feet, 35 feet 40 feet and 45 feet. If the concentrations of PCE detected in the soil-gas samples exceeds $100 \mu\text{g}/\text{kg}$, and if geologic conditions permit, the soil-gas probe will be extended to a depth of 50 feet and possibly 55 feet (depending upon site conditions and equipment capabilities.)

The remaining three soil-gas probes (SG-159, SG-160 and SG-162) will be located inside of or as close as possible to the soil borings discussed in section 4.30 (*Task 3A*) above (B76A-59, B76A-60 and B76A-61). Soil-gas samples will be obtained from a depth of 30 feet, 35 feet, 40 feet and 45 feet in SG-159 and SG-160 and from depths of 5 feet, 10 feet, 15 feet and 20 feet. If the concentration of PCE detected in the soil-gas samples exceeds $100 \mu\text{g}/\text{kg}$, and if geologic conditions permit, the soil-gas probe will be extended to a depth of 50 feet and possibly 55 feet (depending upon site conditions and equipment capabilities).

The additional soil-gas probes will be installed approximately 15 days prior to the initiation of the excavation of soil at the site. The results of the study will be included in the site remediation report which will be prepared following completion of the soil excavation, remediation and receipt of the supporting documents (see *Task 9* below).

Table 10 below presents a summary of the anticipated soil-gas sample locations. Soil-gas samples will be collected at the designated depth and sample locations.

Table 10
Anticipated Soil-gas Sample Schedule
Building 76A, Former Dispenser Area

<u>Probe</u>	<u>Sample Depth(ft)</u>	<u>Location</u>	<u>Proposed Companion Soil Boring</u>
SG-159	10', 15', 20', 25' 30', 35', 40', 45'	B76A-48	B76A-59
SG-160	10', 15', 20', 25'	SG-127	B76A-60
SG-161	10', 15', 20', 25' 30', 35', 40', 45'	B76A-34	B76A-61
SG-162	30', 35', 40', 45'	B76A-46	None
SG-163	30', 35', 40', 45'	B76A-46	None
SG-164	30', 35', 40', 45'	B76A-46	None
SG-165	30', 35', 40', 45'	B76A-46	B76A-62

SG Indicates Soil-gas sample location. Soil-gas samples will be analyzed by United States Environmental Protection Agency (USEPA) Method 8010. Soil-gas samples 1 through 158 were collected prior to December 1994.
Location Refers to previous soil-gas or soil boring locations, Soil boring number 1 through 58 were completed prior to December 1994.

The soil-gas samples will be collected according to the CRWQCB WIP guidelines. A description of the WIP guidelines is presented in the ASL Soil-Gas Sampling workplan and report (see References). Soil-gas probe locations are presented on Figure 7 and 8.

4.40 Task 4 Construction of the Excavations for Soil Removal

A total of one to two excavations are planned for the areas outlined in section 3.0 above. The excavation will extend to a depth of 27 feet (see Figure 5). The actual width and depth of the excavations will vary according to field conditions. The excavations will be constructed to provide safe working conditions for the removal of an estimated 2,200 tons of affected soil. Approximately 2,000 tons of soil is anticipated to contain PCE, TCE, and TPH-diesel. Table 11 below presents a Summary of the Proposed Excavation Statistics for the Building 76A area soil remediation.

Table 11
Summary of Proposed Excavation Statistics

SOIL CONTAINING PCE OR TRPH

<u>Excavations</u>	<u>Number</u>	<u>Depth</u>	<u>Diameter</u>	<u>Est. Tons</u>	<u>Proposed Samples</u>
One excavation*	1	0' - 28'	40'	1995	45
One excavation**	2	0' - 7'	20'	125	10
One Excavation	3	5' - 12'	20'	<u>125</u>	<u>10</u>
		TOTAL		2,205	65

Est. Indicates Estimated.
PCE indicates tetrachloroethene (PCE) by USEPA Test Method 8010, 8240 or 8260.
Area marked with "*" also contains Total Petroleum Hydrocarbons-diesel by United States Environmental Protection Agency (USEPA) Test Method 8015 Modified. Area marked with "**" contains Total Recoverable Petroleum Hydrocarbons (TRPH) according to USEPA Test Method 418.1. (65 excavation sidewall and bottom soil samples plus 10 verification stockpiled soil samples. Approximately twenty of the excavation number one soil samples will also be analyzed for the presence of TPH diesel by USEPA Method 8015 Modified.)

Overburden soil will be excavated and stockpiled away from the excavation until the upper limits of the affected soil is encountered. Soil removed from the excavation will be placed into temporary staging areas located near the excavation or it will be loaded directly into awaiting trucks. The temporary staging areas for the soil suspected of being affected by hydrocarbons will be constructed of visqueen and covered with a thin layer of soil to allow equipment access without damaging the visqueen. A minimum of three layers of 10 mil plastic will be paced over the staging area. The perimeter of the staging area will be bermed to reduce the possibility of overflow.

The soil will be separated in the field as it is removed from the excavation according to the field Photoionization Detector (PID) measurements. The PID will be calibrated daily to 50 parts per million (PPM, in air) hexane gas or an equivalent. Overburden soil or soil found to contain very low concentrations of volatile organics will be separated for re-use and the soil found to contain elevated concentrations of volatile organics will be staged for additional testing or removal.

Concentrations of organic vapors emitted by the soil excavated from excavation number one and two may exceed background concentrations, therefore LESAT or an agent for LESAT will apply for a South Coast Air Quality Management District (SCAQMD) rule 1166 excavation permit. The vapor concentrations will be measured at a distance of approximately three inches above the stockpiled soil at 15 minute intervals during the excavation process to insure compliance with the SCAQMD rule 1166. The measurement readings will be recorded onto a rule 1166 compliance log. If the vapors are found to exceed 50 PPM in air, the excavated soil will be loaded directly into an awaiting truck and covered, or the soil will be stockpiled and covered. Appropriate notification of the SCAQMD will be made if warranted.

PART 1

PART 2

PART 3

FIGURES

4.50 *Task 5* Collection of Verification Soil Samples

A total of approximately 65 verification soil samples will be collected from the excavation sidewalls and bottoms to confirm the condition of the soil remaining in place. The soil samples will be submitted to an on-site mobile laboratory for analysis. Details of the analyses to be performed are presented under *Task 6* below.

Soil samples will be collected from the sidewalls of shallow excavations (less than 5 feet deep) by driving a hand sampling tool (ring sampler) into the desired sampling location and retrieving the sample. Details of the soil sampling and sample handling guidelines are presented in Appendix C and general sampling safety guidelines will be presented in the site safety and health plan. Soil samples collected from the base of excavations or from deeper excavations will be sampled by lowering the excavator bucket into the excavation and recovering a bucket full of soil. Care will be taken to recover samples from the least disturbed portion of the excavation and the excavator bucket. The soil sample will be recovered from the excavator bucket according to the soil sampling and sample handling guidelines (Appendix C).

Table 12 presents a summary of the proposed verification soil sample collection locations.

Table 12
Summary of Proposed
Verification Soil Sample Collection Locations

<u>Excav. No.</u>	<u>Depth</u>	<u>Samples</u>	<u>Locations</u>	<u>Analyses</u>
1	15'	30	Sidewall	1,2
	15'	10	Affected Soil	1,2,4
	25'	5	Base	1,2
2	5'	7	Sidewall	1,3
	7'	3	Base	1,3
3	9'	7	Sidewall	1,3
	12'	3	Base	1,3

Testing Methods:

1. United States Environmental Protection Agency (USEPA) Method 8010 for the presence of Volatile Organic Constituents (VOC's).
 2. USEPA Method 8015 Modified for Diesel, for the presence of Total Petroleum Hydrocarbons (TPH) in the diesel fuel range and
 3. USEPA Method 418.1 for the presence of Total Recoverable Petroleum Hydrocarbons (TRPH).
 4. USEPA Methods 7421 for the presence of Organic Lead.
 5. USEPA Extraction Method 1311 for Toxicity Characteristic Leaching Potential (TCLP) and VOC analysis.
- For excavation location and number refer to Figure 7

PART 1
PART 2
PART 3

4.66 Task 6 Completion of Laboratory Analysis of Soil Samples

The soil samples collected during the field investigation will be submitted to an on-site mobile laboratory for analysis. The analytical laboratory will be certified by the State of California to perform the required analyses. The soil samples will be accompanied by a chain-of-custody document from the time of sampling until the samples are received at the laboratory. The chain-of-custody document will list the personnel who handled the samples and will indicate the sample condition upon arrival at the laboratory. A typical chain-of-custody document is included in Appendix D.

As previously described in Task 5 and Table 12, selected soil samples will be analyzed by the following methods:

- * United States Environmental Protection Agency (USEPA) Method 8010, for the presence of VOC's,
- * USEPA Method 8015 Modified for Diesel, for TPH in the diesel fuel range,
- * USEPA Method 418.1 for the presence of TRPH,
- * USEPA Methods 7421 for organic lead,
- * USEPA Extraction Method 1311 for the Toxicity Characteristic Leaching Potential (TCLP) VOC analysis.

4.70 Task 7 Backfilling and Compaction of Excavations

Lockheed will collect soil samples and have laboratory analysis performed on samples of the soil proposed for importation and use as soil backfill for the excavations. The soil samples will be analyzed for the presence of organic and inorganic constituents as well as for engineering properties. Once approved, the soil will be placed into the excavation in thin uniform lifts and compacted to at least 90 percent relative compaction, and to the original surface configuration. The excavation backfilling and compaction process will be observed and tested by a geotechnical contractor who will prepare a soil compaction report certifying the soil backfill. The report will be signed by a California registered geologist or engineer.

4.80 Task 8 Handling and Disposal of Excavated Soil

The soil will be characterized transported to an appropriately permitted facility, daily. The destination for the affected soil will be determined during the contracting process and during the actual site remediation. An estimated 75 to 85 percent of the soil is anticipated to contain low concentrations of PCE, TCE and diesel fuel hydrocarbons. Soil recycling treatment options will be given priority for soil containing acceptable concentrations of hydrocarbons.

4.90 *Task 9* Preparation of a Report Documenting the Soil Remediation

Following completion of the above listed tasks and receipt of the laboratory analysis results, LESAT will prepare a report summarizing the activities performed at the site and documenting soil excavation and disposal activities. The report will include the locations where verification soil samples were collected, the laboratory analysis results of the samples and copies of the documentation of the soil disposal. Copies of the laboratory analysis results and the chain-of-custody documents will be included within the report. The report will be signed by a California Registered Environmental Assessor and will be reviewed by a California Registered Geologist and will then be provided to the agency for review.

5.0 PROJECT SCHEDULE

We are prepared to begin the work outlined in this proposal immediately upon receipt of written approval by the CRWQCB. The work will be performed in a professional manner commonly practiced in the industry and in accordance with known existing regulations. We estimate that the above described Scope of Work will be completed within 120 days of approval to proceed. If there are additional concerns or requests, please contact Mr. John Johnsen, Lockheed Environmental Systems and Technologies Company at (818) 847-0501.

Subject: Hazardous materials request for 2311 N Hollywood Way

Hi there – I am conducting a Phase I ESA for the above-referenced property and was wondering if there is any hazardous materials info on file for this site such as usage, storage, disposal, underground/aboveground tanks, incidents, releases, responses etc. It was/is occupied by Lockheed, Fry's Electronics and Gort Limited.

Thank you so much for your help,

Claudia M. Cook

January 12, 2001

Mr. Dixon Oriola
California Regional Water Quality Control Board
Los Angeles Region
320 W. 4th Street, Suite 200
Los Angeles, CA 90013

Subject: Transmittal of Chromium Investigation Chemical Storage and Use Questionnaires

Dear Mr. Oriola:

In response to the Los Angeles – California Regional Water Quality Control Board's (LA-CRWQCB) letters dated November 29, 2000, Lockheed Martin Corporation has completed Chemical Storage and Use Questionnaire forms required for nine different properties currently or previously owned by Lockheed Martin Corporation (LMC). Please note, LMC has not conducted operations at these properties for a number of years. The questionnaires were completed based on available historical information in accordance with the due date provided by the LA-CRWQCB. The completed questionnaires are attached for the following properties:

- (1) Plant A-1 North located at 2555 N. Hollywood Way, Burbank
- (2) Plant A-1 South located at 2311 N. Hollywood Way, Burbank
- (3) Plant A-1 East located at 3401 W. Empire Avenue, Burbank
- (4) Plant B-1 located at 1705 Victory Place, Burbank
- (5) Former Plant B-5 located at 4207 Empire Avenue, Burbank
- (6) Plant B-6 West located at 2801 N. Hollywood Way, Burbank
- (7) Plant B-6 East – Building 371 located at 2960 N. Hollywood Way, Burbank
- (8) Plant C-1 located at 10720 Sherman Way, Burbank
- (9) Building 85, Lots 16, and 16A located at 3220 W. Thornton, Burbank

Lockheed Martin is submitting the nine completed questionnaires in advance of the January 15, 2001 due date specified in the LA-CRWQCB's letter dated December 21, 2000.

Mr. Dixon Oriola

CHEMICAL STORAGE AND USE QUESTIONNAIRE

CHROMIUM INVESTIGATION

2001 JUN 19 A 10:07
RECEIVED

I. Facility information

II. Company name: Plant A-1 South

1. Company address: 2311 North Hollywood Way Unit No.

2. City: Burbank Zip code: 91505 Phone: (818) 847-0197

3. Standard Industrial Classification (SIC):

4. Brief description of business:

The plant has been demolished, and the property has been redeveloped.

Historically, Plant A-1 South was used for offices, vehicle maintenance, and parking.

5. EPA Generator Number: CAD008255283 Years in business at this location: 1969 to 1995

6. Answer the following questions relative to **present** operations:

A. Do you do plating or manufacture circuit boards? Yes X No

If yes, please explain:

B. Do you have plating or anodizing tanks? Yes X No

C. Do you perform any metal work? Yes X No

D. Do you have a clarifier, sump, tank or other holding tanks for waste water? Yes X No

E. Do you have an industrial waste permit for sewer discharge? Yes X No

F. Do you store chemicals at this location? Yes X No

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

G. Has any soil, waste water and/or groundwater investigations been conducted on the property? Yes No

If so, by what state or local agency? Los Angeles – California Regional Water Quality Control Board

8. Answer the following questions regarding **past** operations:

A. Do you know if plating operations existed at this location? Yes No

If yes, please explain:

B. Did you once have plating or anodizing tanks? Yes No

C. Did you perform any metal work? Yes No

D. Did you have a clarifier, sump, tank or other holding tanks for waste water? Yes No

E. Did you have an industrial waste permit for sewer discharge? Yes No

F. Did you have a drum storage area? Yes No

G. Have any soil, waste water and/or groundwater investigations been conducted on the property? Yes No

9. Name(s) of former tenants(s), dates of operation and type of business (provide a separate sheet if necessary).

Company Name	Type of Business	Dates of Operation at the Site
None		

10. List all processes in which metallic compounds (derived from the elements listed in Table 1) are used.

The plant has been demolished. Lockheed Martin conducts no operations at this property.

II. Property owner information

1. Name of current property owner: Gort, Ltd. – Fry Electronics
2. Mailing address of property owner: 340 Portage Avenue
3. City: Palo Alto Zip code: 94306 Phone: () _____

4. Prior property owner(s) and the dates of their ownership

Property Owner	Dates of Ownership	
	From	To
Unimart (portion of property)	1962	1986
American Hospital Supply (portion of property)	1962	1969
Lockheed	1969	December 1995

III. Waste Management

1. What are the sources of industrial waste from the site? (Identify sources by process, composition of wastes generated and approximate quantity disposed of monthly).

Lockheed Martin generates no waste at this property.

IV. Sewer Information

1. Industrial Septic tank Municipal Cesspool (Property is currently not owned or occupied by Lockheed)
2. Was a different sewer system used in the past? Yes No
- If yes, specify type Sanitary sewer system

V. Chemical Storage and Use

Complete the following sections for all chemicals (inorganic compounds only) in current use or that have been used in the past. Add separate sheets to complete your listing.

1. Chemical name: Chromate Algicide – located at former Building 76 Cooling Towers
2. Common/Trade name: _____ Quantity stored: Unknown
3. Storage method: Underground tank Drums
 Unknown Above ground tank Other (specify)
4. Waste disposal: Sewered Onsite recycling
 Not Applicable Hauled Offsite recycling
5. Is the waste treated prior to disposal? Not Applicable Yes No
If yes, specify treatment method: _____
6. Is the waste stored prior to disposal? Not Applicable Yes No
7. Is manifest documentation available for designated waste streams? Not Applicable Yes No
-

1. Chemical name: Sulfuric Acid Descaler – located at former Building 76 Cooling Towers
2. Common/Trade name: _____ Quantity stored: Unknown
3. Storage method: Underground tank Drums
 Unknown Above ground tank Other (specify)
4. Waste disposal: Sewered Onsite recycling
 Not Applicable Hauled Offsite recycling

To: Cook, Claudia
Subject: Re: Environmental Site Assessment - 2311 N. Hollywood Way, Burbank 2017 Annual (second quarter)
Attachments: Groundwater Monitoring Report.pdf

Hello Claudia,

I did not find any reports pertaining to UST removal in our GeoTracker database for the subject site but our records did show that the USTs were removed in 1985 and February 1992. The Burbank Fire Department might have digital copies of these reports. The two wells (A-1-CW04 and A-1-CW09) mentioned in your email are located within the USEPA's Burbank Operable Unit for superfund sites and are sampled by Lockheed on an annual basis. Attached is a copy of the 2017 annual monitoring report for all the BOU wells. The current superfund remedial project manager is Ms. Bianca Handley (handley.bianca@epa.gov). She may have more recent groundwater data for these wells.

Thanks,

Anita

Subject: Environmental Site Assessment - 2311 N. Hollywood Way, Burbank

EXTERNAL:

Hi Ms. Fang – I am in the Partner ESI Denver office and am doing an environmental assessment at the above-referenced address. The site has been identified on several database listings and formerly had several USTs removed from the property. I have requested information from the Burbank Fire Department regarding removal of the USTs from this property, which used to be occupied by Lockheed and is referred to as Plant A1-South within the San Fernando NPL boundary. In researching the property on Geotracker I discovered there are two monitoring wells on the north portion of this site. The most recent sampling data appears to be from 2014 and included analytical results for PCE, TCE, chromium and other constituents.

As I indicated I am from Denver, so I am not very familiar with navigating the CRWQCG databases and not too familiar with this NPL site. My question is – would the UST removal documentation be on file with CRWQCB or just the Burbank Fire Department, and are there any more recent analytical results for those two wells, identified as A1-CW04 and A1-CW09?

Thank you so much for your help, I appreciate it

REQUIREMENT FOR A TECHNICAL REPORT PURSUANT TO CALIFORNIA WATER CODE SECTION 13267 - LOCKHEED PLANT A1-SOUTH, 2311 N. HOLLYWOOD WAY, BURBANK, CA 91520 (FILE NO. 104.0675)

Dear Ms. Yuge:

The California Regional Water Quality Control Board, Los Angeles Region, ("Regional Board") is the public agency with primary responsibility to protect groundwater and surface water quality within the Los Angeles Region. This Regional Board and the United States Environmental Protection Agency (US EPA), under the former Well Investigation Program in San Fernando Valley, conducted an initial investigation at your site and a few others. The objectives of that program were to identify sources of chlorinated volatile organic compounds (VOCs) found in the groundwater and remediate them, if needed. On July 6, 1995, the Regional Board issued a letter for your property regarding the investigation of VOCs, stating that we anticipated no further need to investigate for such compounds at your property. Information that has become recently available to the Regional Board demonstrates that some of the groundwater supply wells in the San Fernando Valley Groundwater Basin have been impacted by heavy metals, such as chromium. As a result, we are currently investigating potential sources of chromium contamination in the vicinity.

Chromium is a metallic element widely used in a variety of industrial applications and is present in groundwater in the San Fernando Valley. Chromium concentrations exceed current safe drinking water standards at some locations in the San Fernando Valley and chromium threatens the drinking water resource of the basin. The Maximum Contaminant Level (MCL) for total chromium in California drinking water is 50 parts per billion (ppb).

For your information, the United States Congress passed the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) in 1980 to protect public health and the environment by investigating and remediating sites contaminated with hazardous substances. CERCLA, also known as the Superfund Program provides the U. S. Environmental Protection Agency (US EPA) with the authority to require those responsible for contamination to pay for and/or participate in the investigation and cleanup efforts. California's Porter-Cologne Act provides the Regional Board with similar authority. US EPA and the Regional Board use their

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Ms. Carol Yuge
Lockheed Martin Corporation

2

November 29, 2000

enforcement authority to investigate and remediate sources of contamination that pollute the eastern San Fernando Valley soils and groundwater. The current chromium investigation, lead by the Regional Board, is focused upon identifying individuals and companies responsible for chromium contamination in the eastern San Fernando Valley and holding them responsible for investigation and remediation.

With respect to the current chromium investigation, we have reviewed the case file and report(s) for the subject site and determined that chromium related compounds were used and stored on-site. Based on this information, there is sufficient data to warrant further investigation of chromium impacts at your property.

Therefore, we are requesting pursuant to Section 13276 of the California Water Code that you do the following:

1. Complete the enclosed Chemical Use Questionnaire intended to gather more detailed information about use on your site of heavy metals or use of inorganic compounds from which heavy metals are derived.
2. Return the completed forms to the Regional Board by **December 15, 2000**.

After we review your completed questionnaire, Regional Board staff will follow up with a site inspection. We will either request that you submit a site assessment workplan or recommend that "no further action" is necessary. If submission of a workplan becomes necessary, it must comply with the enclosed "Work Plan Requirements for Subsurface Investigations."

If you have any questions regarding this matter, or would like to schedule a meeting, please call Dr. Arthur Heath at (213) 576-6725 or Mr. Dixon Oriola at (213) 576-6803.

Sincerely,

Dennis A. Dickerson
Executive Officer

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 01/30/2020 has revealed that there are 2 NPL sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains

EXECUTIVE SUMMARY

data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 01/30/2020 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/30/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 11/22/2019 has revealed that there is 1 US INST CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/28/2019 has revealed that there are 19 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 2 CA UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 14 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110009546955

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

essentially been put out of commission.
Exposure of receptors to contaminants can possibly occur through ingestion of contaminated drinking water, inhalation of vapors released from the contaminated water as in taking showers, and dermal exposure as in washing or bathing. However, with the strict regulatory control over water quality by the State's Department of Health, Office of Drinking Water (ODW), the RWQCB, and other agencies, residents are assured that the water they consume is safe and that no one is drinking water which contains concentrations of contaminants above regulatory standards. Federal, state, and local agencies have been conducting investigations and cleanup of contaminated groundwater in the SFVGB since contamination was discovered in 1979. These activities involve measuring the extent of contamination, developing and implementing cleanup remedies, and identifying responsible parties. EPA provided oversight of the basinwide Remedial Investigation (RI) of groundwater contamination conducted by the Los Angeles Department of Water and Power (LADWP) The RI objectives were to collect lithological and water quality data and information regarding basin operations for the eastern SF and Verdugo basins; develop a regional characterization of geology, hydrology, hydrogeology and the nature and extent of groundwater contamination within the eastern & Verdugo basins; study fate and transport of compounds in the environment; identify Applicable or Relevant and Appropriate Requirements (ARAR's); and evaluate the potential risk to human health and the environment.
The Remedial Investigation of the SFVGB was divided into two phases:
Phase I activities have included vertical profile borings and installation of monitoring wells to obtain preliminary contamination information. Monitoring wells have been installed as follows: 34 in North Hollywood (Area #1); 29 in Crystal Springs (Area #2); 7 in Verdugo (Area #3); and 17 in Pollock (Area #4).
Information obtained from Phase I investigation activities identified the need for several operable units. Operable Unit is a federal term which is similar to the State's definition of a removal action.
Phase II activities consist of basinwide remedial investigation conducted by the LADWP.
Remedial Actions (RAs):
North Hollywood (Area #1) -- Two RAs were identified for Area #1, the North Hollywood OU and the Burbank OU.
A Record of Decision (ROD) for the North Hollywood RA was signed in September 1987, selecting groundwater extraction and treatment (air stripping) of 2,000 gallons per minute (gpm) of contaminated water as an interim remedy. This RA was constructed with funding from EPA and the State and has been treating contaminated groundwater since March 1989. This facility is located at 11845 Vose Street in the N. Hollywood section of Los Angeles.
A ROD for the Burbank OU was signed in June 1989, again selecting groundwater extraction and treatment of about 12,000 gpm of contaminated water. Phase I of the Burbank OU began operations in January 1996 treating groundwater at a rate of

1000710134

6,000 gpm. Phase II began operations in May 1998 adding an additional 3,000 gpm to the Burbank OU's treatment capacity.

Crystal Springs (Area #2) -- LADWP has completed a focused RI/FS for this proposed RA. The Glendale OU was separated into a North OU and a South OU based on the amount of contamination and the facilities contributing to the GW contamination. A ROD for each OU was signed on June 18, 1993 designating groundwater extraction and treatment as the interim remedy. The PRPs formed a group and combined the RA efforts for each OU into one document. The selected alternative is GW extraction and treatment. The Glendale OU began operations in September 2000.

Verdugo and Pollock (Areas #3 and #4) --

Currently no RAs have been identified for Area #3 or for Area #4. In October 2003, US EPA proposed No Remedial Action Verdugo Basin (Area #3).

Another contaminant of concern, hexavalent chromium, has been identified in the San Fernando Valley Groundwater Basin. EPA and the RWQCB are currently identifying potential sources of contamination and pursuing PRPs that may be responsible for contaminating groundwater. As these PRPs are identified, individual site investigations and mitigation activities will be pursued. Enforceable agreements and orders will be implemented at numerous specific potential source sites within the Basin by RWQCB and DTSC.

The San Fernando Valley Ground Water Basin (SFGWB) is located within the Upper Los Angeles River Area and consists of the eastern portion of the San Fernando Valley and the entire Verdugo Basin. The SFGWB encompasses approximately 112,000 acres of alluvial valley fill deposits and provides enough water to serve approximately 600,000 residents. The Basin is bounded on the north and the northwest by the Santa Susana Mountains, on the northeast by the San Gabriel Mountains, on the west by the Simi Hills and on the south by the Santa Monica Mountains.

The San Fernando Valley Study area includes four National Priorities List (NPL) sites. They are:

Area #1 - North Hollywood NPL site covers 9336 acres in the eastern part of the San Fernando Valley. The site has been divided into the North Hollywood Operable Unit (OU) and the Burbank OU.

Area #2 - Crystal Springs NPL Site covers 3975 acres south-east of the North Hollywood NPL site and is located in the cities of Glendale and Los Angeles.

Area #3 - Verdugo NPL Site covers 2673 acres in the eastern part of the San Fernando Valley and is located in and adjacent to La Crescenta in the Verdugo Mountains.

Area #4 - Pollock NPL Site covers 1653 acres in the southeastern part of the San Fernando Valley and is located in and adjacent to the cities of Los Angeles and Glendale. Groundwater contamination in the SFGWB is linked to prewar, postwar, and current industrialization in the San Fernando Valley.

The primary contaminants of concern are volatile organic compounds (VOCs), trichloroethylene (TCE), and tetrachloroethylene (PCE), which have been and/or are being used in many San Fernando Valley

industries, such as aeronautical, automotive, dry cleaning, and metal plating. These solvents have found their way to the groundwater basin as a result of both past and improper use, storage, and disposal practices. The SFVGB Superfund sites, added to the NPL in 1986, are areas where groundwater from wells have been found to contain VOCs above the state and federal drinking water standards. Groundwater contamination at numerous wells have been so severe with TCE and PCE that these wells have

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 08/17/1998
Comments: A second 5-year review of remedial activities is conducted at the North Hollywood OU (NHOU) and covers operations from 1993 thru 1997. The purpose was to evaluate whether the NH Interim Remedy achieved the objectives specified in the ROD. The findings of the 5-year review are that the objectives of the ROD have been met.

Background Info: The San Fernando Valley Ground Water Basin (SFVGWB) is located within the Upper Los Angeles River Area, and consists of the eastern portion of the San Fernando Valley and the entire Verdugo Basin. The SFVGWB encompasses approximately 112,000 acres of alluvial valley fill deposits and provides enough water to serve approximately 600,000 residents. The Basin is bounded on the north and the northwest by the Santa Susana Mountains, on the northeast by the San Gabriel Mountains, on the west by the Simi Hills and on the south by the Santa Monica Mountains. The San Fernando Valley Study area includes four National Priorities List (NPL) sites. They are:
Area #1 - North Hollywood NPL Site covers 9336 acres in the eastern part of the San Fernando Valley. The site has been divided into the North Hollywood Operable Unit(OU) and the Burbank OU.
Area #2 - Crystal Springs NPL Site covers 3975 acres located southeast of the North Hollywood NPL site and is in the cities of Glendale and Los Angeles.
Area #3 - Verdugo NPL Site covers 2673 acres in the eastern part of the SF Valley and is located in and adjacent to La Crescenta in the Verdugo Mountains.
Area #4 - the Pollock NPL Site covers 1635 acres in the south-eastern part of the San Fernando Valley and is located in and adjacent to the cities of Los Angeles and Glendale.
Groundwater contamination in the SFVGWB is linked to prewar, postwar, and current industrialization in the San Fernando Valley.
The primary contaminants of concern are the volatile organic compounds (VOCs) trichloroethylene (TCE) and tetrachloroethylene (PCE). These compounds have been and/or are being used in many San Fernando Valley industries, such as aeronautical, automotive dry cleaning, and metal plating. These solvents have found their way to the groundwater basin as a result of both past and improper use, storage and disposal practices. The SFVGWB Superfund sites, added to the NPL in 1986, are areas where groundwater from wells have been found to contain VOCs above

SAN FERNANDO VALLEY (AREA 1) (Continued)

1000709322

the state and federal drinking water standards. Groundwater contamination in numerous wells have been so severe with TCE and PCE that these wells have essentially been put out of commission. Exposure of receptors to contaminants can possibly occur through ingestion of contaminated drinking water, inhalation of VOC vapors released from the contaminated water as in taking showers, and dermal exposure as in washing or bathing. However, with the strict regulatory control over water quality by the State's Department of Health, Office of Drinking Water (ODW), the RWQCB, and other agencies, residents are assured that the water they consume is safe and that no one is drinking water which contains concentrations of contaminants above regulatory standards. Federal, state, and local agencies have been conducting investigations and cleanup of contaminated groundwater in the San Fernando Valley since contamination was discovered in 1979. These activities involve measuring the extent of contamination, developing and implementing cleanup remedies, and identifying responsible parties. EPA provided oversight of the basinwide Remedial Investigation (RI) of groundwater contamination conducted by the Los Angeles Department of Water and Power (LADWP). The RI objectives were to collect lithological and water quality data and information regarding basin operations for the eastern SF and Verdugo basins; develop a regional characterization of geology, hydrology, hydrogeology and the nature and extent of groundwater contamination within the eastern and Verdugo basins; study fate and transport of compounds in the environment; identify Applicable or Relevant and Appropriate Requirements (ARAR's) and evaluate the potential risk to human health and the environment. The Remedial Investigation of the SFVGWB was divided into two phases. Phase I activities have included vertical profile borings and installation of monitoring wells to obtain preliminary contamination information. Monitoring wells have been installed as follows: 34 in North Hollywood (Area #1); 29 in Crystal Springs (Area #2); 7 in Verdugo (Area #3); and 17 in Pollock (Area #4). Information obtained from Phase I investigation activities identified the need for several operable units. Operable Unit is a federal term which is similar to the State's definition of a removal action. Phase II activities consist of a basinwide remedial investigation conducted by the LADWP. Remedial Actions (RAs): North Hollywood (Area #1) -- Two RAs were identified for Area #1, the North Hollywood OU and the Burbank OU. A Record of Decision (ROD) for the North Hollywood RA was signed in September 1987, selecting groundwater extraction and treatment (air stripping) of 2,000 gallons per minute (gpm) of contaminated water as an interim remedy. This RA was constructed with funding from EPA and the State and has been treating contaminated groundwater since March 1989. This facility is located at 11845 Vose Street in the N. Hollywood section of Los Angeles. A ROD for the Burbank OU was signed in June 1989, again selecting groundwater extraction and treatment of about 12,000 gpm of contaminated water. Phase I of the Burbank OU began

SAN FERNANDO VALLEY (AREA 1) (Continued)

1000709322

operations in January 1996 treating groundwater at a rate of 6,000 gpm. Phase II began operations in May 1998 adding an additional 3,000 gpm to the Burbank OU's treatment capacity.

Crystal Springs (Area #2) -- LADWP has completed a focused RI/FS for this proposed RA. The Glendale OU has been separated into a North OU and a South OU based on the amount of contamination and the facilities contributing to the GW contamination. A ROD for each OU was signed on June 18, 1993 designating groundwater extraction and treatment as the interim remedial. The PRPs have formed a group and combined the RA efforts for each OU into one document. The selected alternative is GW extraction and treatment. The Glendale OU began operations in September 2000.

Verdugo and Pollock (Areas #3 and #4) -- Currently no RAs have been identified for Area #3 or for Area #4. In October 2003 US EPA proposed No Remedial Action for Verdugo Basin (Area #3).

Another contaminant of concern, hexavalent chromium, has been identified in the San Fernando Valley Groundwater Basin.

EPA and the RWQCB are currently identifying potential sources of contamination and pursuing PRPs that may be responsible for contaminating groundwater. As these PRPs are identified, individual site investigations and mitigation activities will be pursued. Enforceable agreements and orders will be implemented at numerous specific potential source sites within the Basin by RWQCB and DTSC

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
SUPERFUND NPL
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

FINDS:

Registry ID: 110002650747
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002650747

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

CERS HAZ WASTE:

Name: DIE WEST INC
Address: 2228 N HOLLYWOOD WAY # A
City,State,Zip: BURBANK, CA 91505
Site ID: 111522
CERS ID: 10229401
CERS Description: Hazardous Waste Generator

Violations:

Site ID: 111522
Site Name: DIE WEST INC
Violation Date: 12-10-2014
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 08/03/2015.
Violation Division: Burbank Fire Department
Violation Program: HMRRP

FINDS:

Registry ID: 110002841499
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002841499

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 15635.9

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple

Violation Description:

Hazardous Waste Generator Program - Administration/Documentation - General

Violation Notes:

Returned to compliance on 10/19/2016. OBSERVATION: Owner/Operator failed to submit the hazardous waste notification electronically to CERS. Not submitted since 2013. Please re-submit with any updates. CORRECTIVE ACTION: Owner/Operator shall submit a notification of hazardous waste generated by the facility in accordance with HSC 25128 electronically to CERS. HSC 25404(e)(4) No later than three years after the statewide information management system is established, each CUPA, PA, and regulated business shall report program data electronically. The secretary shall work with the CUPAs to develop a phased in schedule for the electronic collection and submittal of information to be included in the statewide information management system, giving first priority to information relating to those chemicals determined by the secretary to be of greatest concern. The secretary, in making this determination shall consult with the CUPAs, the California Emergency Management Agency, the State Fire Marshal, and the [Truncated]

Violation Description: Chapter 12, Section(s) 66262.34(d)
Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 03/13/2018. OBSERVATION: 1x55 gal plastisol in located in the back lot was observed WITHOUT AN ACCUMULATION START DATE and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of Non-RCRA Hazardous waste liquid, plastisol ink and submit a copy of the manifest/receipt to the CUPA.

CPS-SLIC:

Name: LOCKHEED PLANT A-1 NORTH
Address: 2555 N. HOLLYWOOD WAY.
City,State,Zip: BURBANK, CA
Region: STATE
Facility Status: Open - Eligible for Closure
Status Date: 09/27/2016
Global Id: SL603798649
Lead Agency: LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number: Not reported
Latitude: 34.195182
Longitude: -118.348014
Case Type: Cleanup Program Site
Case Worker: Not reported
Local Agency: Not reported
RB Case Number: 104.5152
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Not reported
Site History: An SVE system operated at the site from 2003 - 2008 and removed approximately 28,000 lbs of VOCs, particularly PCE. Historical metals investigation data shows CrVI was removed during remedial excavation activities. This site is being reviewed for a soils-only closure. No monitoring wells are located on site.

073 LOCKHEED-BURBANK PLANTS A-1, B-1, B-6 & C-1 CA BOND EXP. PLAN S100833478
NNE 2555 NO. HOLLYWOOD WAY N/A
1/8-1/4 BURBANK, CA 91520
0.193 mi. Site 12 of 15 in cluster O
1019 ft.

Relative:
Higher
Actual:
679 ft.

CA BOND EXP. PLAN:
 Responsible Party: RWQCB REFERRAL SITE
 Project Revenue Source Company: Not reported
 Project Revenue Source Addr: Not reported
 Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: The PRP is providing for the remediation of the site under RWQCB lead and will pay all costs associated with site cleanup. There are no current plans for expenditure of Bond funds for the site.

Site Description: The site is the location of an aircraft manufacturing facility constructed in the late 1930's and early 1940's. Operational activities include aircraft research, manufacturing and maintenance. Hazardous materials which are used at the facility include plating solutions, acids, fuels, and solvents.

Hazardous Waste Desc: The facility overlies the San Fernando Valley Ground Water Basin. Analysis of monitoring wells on the facility and downgradient has revealed contamination of the ground water by perchloroethylene (PCE) and trichloroethylene (TCE). Concentrations of PCE vary from approximately 20 to 12,000 parts per billion (ppb) and from approximately 20 to 1,600 ppb for TCE. Other compounds detected at low levels are acetone, chloroform, methyl ethyl ketone, chlorobenzene, ethylbenzene, and benzene.

Threat To Public Health & Env: The contaminated aquifer is a major source of drinking water for the city. Wells downgradient have been shut down due to contamination from this or other sources. If the contamination migrates further offsite, additional wells may become contaminated, thus leading to a reduction in water quality and potential long-term loss of water supply.

Site Activity Status: The potentially responsible party (PRP) has installed ground water monitoring wells and is currently working under the direction of the Regional Water Quality Control Board to determine the nature and extent of the contamination.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002946117

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RB Case Number: 104.5153
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Not reported
Site History: Site assessments indicated elevated concentrations of PCE and TCE in the vadose zone in the northwest portion of the site near a former AST. An NFR letter was issued on November 16, 1995 excluding the VOC-contaminated northwest area. An SVE system operated intermittently between 1997 and 2002. PCE, TCE, and 1,1-DCE were significantly reduced compared to baseline concentrations and asymptotic conditions were attained. VLEACH modeling indicated that residual VOCs will not further degrade groundwater quality beneath the site. The Regional Board issued an NFR for soils letter on February 7, 2003. LMC monitors and treats the groundwater in the BOU on an ongoing basis with oversight by USEPA.

Registry ID: 110002843200
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002843200

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PREMIER SUEDE & LEATHER CLEANER (Continued)

S106483563

(uses other than drinking water), Soil, Soil Vapor, Under Investigation

Potential Contaminants of Concern: Not reported

Site History:

After reviewing (1) Vapor Extraction System Operation Report dated December 19, 2008, and (2) Temporary VES Operation Report & Closure Borings Workplan dated August 12, 2009, Regional Board staff M. Zaidi had a meeting on 11/10/2009 with the RP and staff of The Source Group at the site. Mike Wood of the Source Group sent an email to Mr. Zaidi summarizing the meeting notes, which were reviewed and amended by Mr. Zaidi and sent back to Mr. Wood in an email dated 11/25/09. After collecting soil gas samples from the wells, The Source Group will submit a technical report after receiving the analytical results of the soil gas samples to the Regional Board staff for their review. The RP consultant has collected soil gas samples for a rebound test on 2/19/2010, and plans to drill two confirmation soil borings in March 2010. Regional Board staff issued a No Further Requirements for Soil Only letter dated 3/30/11 for the Former Premier Cleaners site. The Site was found to be an open lot during staff's site inspection in 2010.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

PROCESS CONTROL LABS (Continued)

S106484436

Violation Notes: Returned to compliance on 02/22/2019. OBSERVATION: The Owner/Operator failed to maintain cyanide treatment records at the facility for three years. Owners or Operators shall ensure that the following records are maintained at the facility for a minimum of three years from the last date of any activity: written approval from the agency operating the POTW receiving the facility's discharges, a written method documented in the waste analysis plan for ensuring that the concentration of total cyanide does not exceed 5000 milligrams per liter in the aqueous waste resulting from mixing, and documentation that the residual solids generated by treatment have been sent offsite for metals recovery or reclamation, or determined to be not amendable for recycling. CORRECTIVE ACTIONS: Ensure that the cyanide treatment records, as listed in this section, are maintained at the facility for a minimum of three years. Submit copies of supporting documentation that demonstrates compliance with this requirement to the CUPA.

Violation Date: 02-22-2019
Citation: HSC 6.5 25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25201(a)
Violation Description: Failure of a storage facility, treatment facility, transfer facility, resource recovery facility, or disposal site to accept, treat, store, or dispose of a hazardous waste at the facility, area, or site, without a hazardous waste facilities permit or other grant of authorization from the department, or a permit-by-rule, conditional authorization, or conditional exemption permit from the CUPA.
Violation Notes: OBSERVATION: The owner or operator failed to obtain a permit to treat HW. No owner or operator of a storage facility, treatment facility, transfer facility, resource recovery facility, or disposal site shall accept, treat, store, or dispose of HW at the facility, area, or site, unless the owner or operator holds a HW facilities permit or other grant of authorization from the DTSC to use and operate the facility, area, or site, or the owner or operator is operating under a permit-by-rule pursuant to the DTSC's regulations, or a grant of conditional authorization or conditional exemption pursuant to this chapter. No permit for cyanide rinse water treatment, tank BT#02. CORRECTIVE ACTIONS: Immediately obtain a permit to treat HW by permit-by-rule, conditional authorization, or conditional exemption for this facility issued from the CUPA.

Violation Description: Failure of the owners or operators treating cyanide waste solutions to implement best management practices (BMP) to reduce waste generation, and minimize or eliminate releases to work areas and the environment.

Violation Notes: OBSERVATION: The owners or operators of the treatment unit failed to reduce the generation of cyanide-containing wastes. The owners or operators of all sites or facilities subject to subsection (d) shall implement the following to reduce waste generation and minimize or eliminate releases to work areas and the environment: use holding racks and/or drain boards between all process and rinse tanks to contain plating drag-out, rinse solution drag-out, and return drag-out solutions to process tanks, use countercurrent rinsing to reduce water use and wastewater generation when multiple sequential rinse tanks are used, at a minimum, every four (4) years, review the use of cyanide-containing process baths to determine if a non-cyanide alternative with equivalent results is available as part of: the Source Reduction Evaluation Review and Plan pursuant to HSC section 25244.19, an Environmental Management System or an environmental performance evaluation plan. Citation: 22 CCR 45 67450.11(d)(7)(E) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.11(d)(7)(E)
Violation Description: Failure to maintain the required documents at the facility for a minimum of three years from the last date of any activity and made available to authorized representatives of the Department, the CUPA, or the U.S. EPA.
Violation Notes: Returned to compliance on 02/22/2019. OBSERVATION: The Owner/Operator failed to maintain cyanide treatment records at the facility for three years. Owners or Operators shall ensure that the following records are maintained at the facility for a minimum of three years from the last date of any activity: written approval from the agency operating the POTW receiving the facility's discharges, a written method documented in the waste analysis plan for ensuring that the concentration of total cyanide does not exceed 5000 milligrams per liter in the aqueous waste resulting from mixing, and documentation that the residual solids generated by treatment have been sent offsite for metals recovery or reclamation, or determined to be not amendable for recycling. CORRECTIVE ACTIONS: Ensure that the cyanide treatment records, as listed in this section, are maintained at the facility for a minimum of three years. Submit copies of supporting documentation that demonstrates compliance with this requirement to the CUPA.

Violation Date: 09-14-2017
Citation: 22 CCR 45 67450.2(b)(2) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.2(b)(2)

Violation Description: Failure to submit the signature page for the onsite treatment notification.

Violation Notes: Returned to compliance on 02/22/2019. OBSERVATION: A notification for treating hazardous waste onsite has not been submitted to the CUPA. No person may treat hazardous waste onsite without submitting notification sixty (60) days prior to beginning the first treatment of hazardous waste. Cyanide rinse water destruction. CORRECTIVE ACTION: Immediately submit the required Hazardous Waste Treatment notification to the CUPA for review and authorization to operate.

Hazardous Waste Summary:

- . Waste code: 135
- . Waste name: Unspecified aqueous solution

- . Waste code: 141
- . Waste name: Off-specification, aged, or surplus inorganics

- . Waste code: 181
- . Waste name: Other inorganic solid waste

- . Waste code: 213
- . Waste name: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

- . Waste code: 214
- . Waste name: Unspecified solvent mixture

- . Waste code: 331
- . Waste name: Off-specification, aged, or surplus organics

- . Waste code: 341
- . Waste name: Organic liquids (nonsolvents) with halogens

- . Waste code: 343
- . Waste name: Unspecified organic liquid mixture

- . Waste code: 352
- . Waste name: Other organic solids

- . Waste code: 513
- . Waste name: Empty containers less than 30 gallons

- . Waste code: 551
- . Waste name: Laboratory waste chemicals

- . Waste code: 791
- . Waste name: Liquids with pH < 2

- . Waste code: 792
- . Waste name: Liquids with pH < 2 with metals

- . Waste code: D001
- . Waste name: IGNITABLE WASTE

- . Waste code: D002
- . Waste name: CORROSIVE WASTE

- . Waste code: D003
- . Waste name: REACTIVE WASTE

- . Waste code: D005
- . Waste name: BARIUM

- . Waste code: D006
- . Waste name: CADMIUM

- . Waste code: D007

- . Waste name: CHROMIUM
- . Waste code: D008
- . Waste name: LEAD
- . Waste code: D009
- . Waste name: MERCURY
- . Waste code: D011
- . Waste name: SILVER
- . Waste code: D035
- . Waste name: METHYL ETHYL KETONE
- . Waste code: D039
- . Waste name: TETRACHLOROETHYLENE
- . Waste code: F001
- . Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
- . Waste code: F002
- . Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
- . Waste code: F003
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
- . Waste code: F005
- . Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- . Waste code: F007
- . Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

- . Waste code: U002
- . Waste name: 2-PROPANONE (l) (OR) ACETONE (l)

- . Waste code: U122
- . Waste name: FORMALDEHYDE

- . Waste code: U220
- . Waste name: BENZENE, METHYL- (OR) TOLUENE

- . Waste code: U226
- . Waste name: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
- Amount (Lbs): 24183

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
- Amount (Lbs): 8215

- Waste code: D006
- Waste name: CADMIUM
- Amount (Lbs): 8300

- Waste code: D007
- Waste name: CHROMIUM
- Amount (Lbs): 11171

- Waste code: D008
- Waste name: LEAD
- Amount (Lbs): 935

- Waste code: D009
- Waste name: MERCURY
- Amount (Lbs): 36

Site History: The Hydro-Aire facility is a subsidiary of Crane, a diversified manufacturer of engineered industrial products with operations worldwide. Hydro-Aire has been in operation at this location since 1946 (Hydro-Aire, 1987). Hydro-Aire manufactures aviation and aeronautical equipment at the site. The site encompasses approximately 11 acres in an industrial area of the City of Burbank (Figure 1). Kerr Canning Company used to occupy the site and the adjacent properties were used for agricultural purposes (grape growing). Pursuant to the California Environmental Quality Act (CEQA), the DTSC has prepared a Notice of Exemption (NOE) dated August 15, 2011, which concludes that the project will not have significant effect on the environment and a Land Use Covenant is to be recorded to restrict the property to current industrial/commercial use. Currently, several office and manufacturing buildings occupy the central and northern portions of the property, and paved parking areas are located in the eastern and southern portions of the site. The former plating room and the former wastewater treatment system were located at the south end of Building 1 (Figure 2). Hydro-Aire began electroplating operations at this location in 1951. In February 1985, an automated wastewater treatment system was installed as an integral part of the plating line (Hydro-Aire, 1986). The plating and wastewater treatment operations were discontinued in February 1991. Demolishing of the former plating room and wastewater treatment system components was conducted in 1991 and 2001. The California Regional Water Quality Control Board Los Angeles Region (RWQCB) has been the lead agency for the Hydro-Aire site investigation and remediation work since the 1980s. Significant investigation and remediation work at the site have been completed under the RWQCBs oversight including the former plating room assessments and soil remediation and groundwater monitoring. Concurrently with the RWQCB, the DTSC and City of Burbank have also provided oversight for this project. Detailed descriptions of the former plating room and operations have been provided in reports submitted to the Regional Board.

Environmental Interest/Information System:

HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/26/2012
Comments: 3/22/2012, DTSC's PM visited the site, and performed walk through of the site with Mr. Sergik Avakian representing the American Best Engineering, the current operator at the site. It was observed that the restricted area as defined by the LUC is in full compliance with the stipulated terms in the LUC. Mr. Avakian mentioned that he is renting/lease the site from a new owner. On 3/26/2012 DTSC's PM contacted Mr Richard Fond, and was confirmed Mr Fond sold the property on March 2012. DTSC's PM requested Mr Fond to advise DTSC regarding the particulars on the ownership transfer as required by the LUC, Mr. Fond will respond to the request.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

- . Waste code: 121
- . Waste name: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

- . Waste code: 181
- . Waste name: Other inorganic solid waste

- . Waste code: 343
- . Waste name: Unspecified organic liquid mixture

- . Waste code: D001
- . Waste name: IGNITABLE WASTE

- . Waste code: D002
- . Waste name: CORROSIVE WASTE

- . Waste code: D007
- . Waste name: CHROMIUM

- . Waste code: D035
- . Waste name: METHYL ETHYL KETONE

- . Waste code: F001
- . Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 7000

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Amount (Lbs): 3000

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Not reported
Site History: Magna Plating was developed as a plating facility from 1953 through July 2006. The present ownership has operated Magna-Plating Company since 1963. Magna-Plating Company utilized cadmium, zinc, nickel and chromium in their operations as a plating facility. Chromium use was reportedly phased out in 1997. The Los Angeles Regional Water Quality Control Board (LARWQCB) required the plating facilities to evaluate and remediate the presence of heavy metals in soil, and chlorinated solvents, total chromium, hexavalent chromium and metals in groundwater.

FINDS:

Registry ID: 110002632642
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002632642

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/16/2019	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQQ: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/11/2019

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

UTM Y (Meters):	3783967.8
Elevation:	673 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630791 BURBANK, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1328F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>

06037C1337F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BURBANK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Surficial Soil Types: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Shallow Soil Types: fine sandy loam
 gravelly - loam
 sand
 silty clay

Deeper Soil Types: stratified
 clay loam
 silty clay loam
 gravelly - sandy loam
 coarse sand
 sand
 weathered bedrock
 very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

BS, Geography: Physical Geography, Field Methods, and Earth Processes Emphasis, Arizona State University, Tempe, AZ

Highlights

14+ years in Environmental Consulting Industry:
Phase I Environmental Site Assessments
Phase II Environmental Site Assessments
Environmental Remediation

Experience Summary

Ms. Cook serves as a Project Assessor in the Environmental Science Division at Partner Engineering and Science, Inc. (Partner), where her duties include conducting Phase I and Phase II Environmental Site Assessments (ESAs), as well as Environmental Compliance Projects, in accordance with ASTM Standards and the US Environmental Protection Agency's All Appropriate Inquiry (AAI) compliance requirements. Her responsibilities include site assessment and reconnaissance, hydrogeological review, historical data review and analysis, agency data analysis, agency contact and research, Phase II recommendations, client communication, and report preparation.

Ms. Cook has over 14 years of experience as an Environmental Professional and Project Assessor. Prior to her current role, Ms. Cook previously worked for nearly a decade at Partner, where she worked on a variety of commercial real estate sites and facilities, including gas stations, industrial processing facilities, manufacturing sites, cell tower locations, storage facilities, hospitals, multi-family properties, and hospitality facilities. Most of these properties were located in the western United States.

Ms. Cook also has significant experience working on government projects at state and local levels. Ms. Cook was the lead assessor of equipment manufacturing and die-casting facilities investigated by the California Regional Water Quality Board for potential contamination from solvents, metals, and polychlorinated biphenyls in soil and/or groundwater. Her most notable government projects included three government contracted aircraft modification facilities previously occupied by the United States Navy and United States Marine Corps. Mrs. Cook performed regulatory compliance services involving transport, storage/disposal of hazardous waste; NPDES Permitting; Compliance Audits; and deed restrictions to obtain site closure.

Project Experience

United States Postal Service, various sites throughout OR and WA. Ms. Cook was the Task Manager overseeing the removal of underground heating oil storage tanks, and her duties included site surveys, sub-contractor bidding, supervision of contractors and tank removal, excavation and collection of soil and water samples, and facilitating site closure.

Bonneville Power Administration, Various locations, OR. Ms. Cook was the Task Manager and field support specialist for on-going sludge sampling and geophysical surveying.

Umatilla Army Depot, Umatilla, OR. Ms. Cook provided field support for soil sampling and site surveying.

Marina Construction Site, OR. Ms. Cook provided field support and report preparation of baseline water, fisheries and bathymetric data.

Highlights

Phase I Environmental Site Assessments
Transaction Screen Assessments
Environmental Desktop Reports

Experience Summary

Mr. Mowers serves as a Staff Assessor for Partner Engineering and Science, Inc. (Partner), to perform Phase I Environmental Site Assessments in accordance with EPA's All Appropriate Inquiry (AAI) and the American Society of Testing and Materials (ASTM). His responsibilities include conducting Freedom of Information Act (FOIA) agency file reviews, detailed site-inspections, in-depth historical reviews, and preparation and submittal of reports.

Outside of environmental consulting, Mr. Mowers has experience with ecological sustainability, environmentally sensitive medical waste disposal, and environmental law proficiency with NEPA, CEQA, ESA, and the CCC. Through his coursework at UCSB, Mr. Mowers was responsible for assisting in the design of aquatic and terrestrial ecologically sustainable models and field data recordings. His skills in research, technical writing, data management, and environmental efficiency have prepared him well for his role as a Staff Assessor.

Project Experience

Mr. Mowers has experience performing due diligence assessments for a variety of property types. For each assessment he reviews the condition of the building structure and systems and develops a thorough report.

Automotive Repair, Costa Mesa, CA. Mr. Mowers performed a Phase I Environmental Site Assessment for a 2,064 square-foot automotive repair center with multiple aboveground and in-ground hydraulic lifts, along with outdoor waste oil, filters, and engine oils storage.

Commercial Retail Center, Hawthorne, CA. Mr. Mowers performed a Phase I Environmental Site Assessment for a 186,434 square-foot commercial retail center with multiple retail stores and a current dry-cleaner.

Commercial Retail Center, Redondo Beach, CA. Mr. Mowers performed a Phase I Environmental Site Assessment for an 18,000 square-foot commercial center with multiple industrial businesses along with a current dry-cleaner, historic railroad, and on-site UST.

Industrial Factory/Office, Los Angeles, CA. Mr. Mowers assisted in completing a Phase I Environmental Site Assessment for a 2,000,000 square-foot industrial facility, with a gas station, multiple AST's and hydraulic components on site.

Asbestos Hazard and Emergency Response Act (AHERA) Building Inspection for Asbestos
Mine Safety and Health Administration (MSHA) – Part 46 and Part 48 Certified
Hazardous Waste Operations and Emergency Response (HAZWOPER), 40-hour (with First Aid, CPR)

Highlights

Over 13 years of experience conducting Phase I and Phase II Environmental Site Assessments (ESAs)
Over 13 years conducting industrial hygiene assessments such as asbestos, lead, radon, and mold surveys

Experience Summary

Mr. Boyce serves as a Project Manager for Partner Engineering and Science, Inc. (Partner), overseeing and managing all aspects of multi-scope projects including Phase I ESAs in accordance with EPA's All Appropriate Inquiry (AAI), Property Condition Assessments (PCAs), Zoning Reports, Seismic Assessments, and Industrial Hygiene-related projects. Mr. Boyce also serves as a senior technical reviewer on environmental due diligence assessments, including Phase I and II ESAs, for a variety of Clients.

Mr. Boyce has significant experience in due diligence assessments for a variety of property types and the needs and requirements of varied number of reporting standards, including ASTM standards, EPA's All Appropriate Inquiry (AAI), and customized client formats. Specifically, Mr. Boyce has performed Phase I Environmental Site Assessments (ESAs), Geotechnical Evaluations, Environmental Transaction Screens, Phase II and III Subsurface Investigations, Regulatory Compliance Assessments, Asbestos Surveys, Lead-based Paint Surveys, Radon Studies, and Mold Assessments.

Environmental Assessments

Duties included performing site visits; gathering zoning, ownership, building permits, fire records, and groundwater well information; geology research; UST and leaking underground storage tank (LUST) file review; aerial photograph interpretation; Resource Conservation Recovery Act (RCRA), Water Quality Assurance Revolving Fund (WQARF), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) database and city directory review; personal interviews; and preparation of technical reports.

Subsurface Investigations

Mr. Boyce has extensive experience in conducting Phase II Subsurface Investigations on industrial manufacturing facilities, gas stations, auto repair facilities, multi-family residential properties, shopping centers, and undeveloped land. Mr. Boyce has conducted soil and soil gas sampling, oversight of underground storage tank (UST) removals, drywell investigations, and soil and groundwater remediation activities (Former Industrial Plating Facilities/Former Military Airport).

Industrial Hygiene Surveys

Mr. Boyce has served as a Project Scientist/Project Manager on numerous Industrial Hygiene related projects. Projects included asbestos, microbial remediation, lead-based paint, and industrial hygiene (plating and paint mixing facilities) related projects, including sampling, report preparation, and senior review for numerous banking entities, municipalities, law firms, and a variety of commercial businesses throughout the United

States. In addition, Mr. Boyce has provided asbestos and microbial abatement oversight activities at private, commercial, and school facilities.

Geotechnical/Forensic

Mr. Boyce's field experience also includes logging and sampling geotechnical borings for civil engineering projects, and conducting floor measurement surveys for forensic-related studies. Duties included placing boring locations via GPS coordinates, logging borings, collection of soil samples, classifying soils in accordance with Unified Soil Classification System (USCS), and supervision and coordination of drilling and utility locating companies.

Project Experience

Various High Profile and Historic Hotel/Resort Properties, Various locations throughout the United States and Caribbean. Mr. Boyce has managed numerous multi-scope equity projects on high profile and historic hotel/resort properties, with scopes of work including Phase I ESAs, PCAs, Zoning Reports, Seismic Assessments, and Industrial Hygiene-related sampling.

Various FDIC Properties, Various locations throughout the United States. Mr. Boyce has managed numerous FDIC projects on various properties, with scopes of work including Phase I ESAs and Industrial Hygiene-related sampling.

Various High-Rise Commercial Properties, Various locations throughout the United States. Mr. Boyce has managed numerous multi-scope equity projects on high-rise properties, with scopes of work including Phase I ESAs, PCAs, Zoning Reports, Seismic Assessments, and Industrial Hygiene-related sampling.

Various Large-Scale Mining Operations, Various locations throughout the Western United States. Mr. Boyce has managed and conducted numerous multi-scope projects on large-scale coal, copper, and surface mining operations located throughout the western United States, with scopes of work including Phase I and Phase II ESAs, aboveground storage tank (AST) compliance, and asbestos (transite pipe) removal.

Department of Defense Cleanup, Mesa, Arizona. Mr. Boyce was subcontracted to provide general technical operation assistance and routine compliance sampling at a Thermally-Enhanced Soil Vapor Extraction pilot test for a former Air Force jet fueling compound and active Superfund Site.

Former Semi-Conductor Facility, Phoenix, Arizona. Mr. Boyce conducted numerous subsurface investigations at a former semiconductor facility and provided technical oversight during remedial activities and post-remedial clearance sampling.

UST Removal Oversight, Throughout Arizona. Mr. Boyce conducted numerous subsurface investigations and UST removals under the oversight of the Arizona Department of Environmental Quality at various locations throughout Arizona. Mr. Boyce provided technical oversight during remedial activities and post-remedial clearance sampling.

Highlights

Almost 20 years in the environmental and engineering consulting industry
Founding member of Partner Engineering and Science, Inc.
Executive Board Member of Partner Engineering and Science, Inc.

Experience Summary

Ms. Redlin brings unique expertise and experience as an almost 20-year veteran of the environmental and engineering consulting industry.

With her strong background in environmental science, coupled with a deep understanding of the commercial real estate business process, Ms. Redlin has become the leading expert in all things relating to commercial real estate due diligence. She has gained valuable knowledge and know-how from having been personally involved in the details of thousands of real estate transactions for various client types, and therefore understands the specific needs and scopes of work required for all parties involved in a transaction. Ms. Redlin's due diligence resume includes advising lenders and real estate investors on a wide gamut of due diligence. This knowledge allows her to offer the most efficient and cost-effective solutions for a wide array of commercial real estate transactions.

Ms. Redlin has extensive experience managing all aspects of due diligence for nationwide and local clients. Real estate investors, redevelopment agencies, financial institutions, insurance lenders, and real estate equity funds have come to rely on her advice and judgment to help them with their real estate business decisions. Ms. Redlin is a dedicated professional who takes pride and pleasure in meeting her client's needs and spearheading and assembling the team with the expertise to handle any issue that may come up during the transaction.

Outside of providing her clients with support on their transactions, Ms. Redlin is a respected and relied upon industry thought leader. She regularly provides insight by contributing to respected industry publications and speaks at industry events.

As an executive board member at Partner, Ms. Redlin is responsible for helping to shape the direction of Partner. Through her leadership contributions, Partner has achieved substantial growth even in the downturn of the commercial real estate market. Average annual growth has been roughly 20% over recent years slowing from exponential growth in the early years of the company. Ms. Redlin has successfully grown her personal book of business at Partner by more than 10% on average annually. As an executive, she provides mentorship to Partner's sales team and operation managers. Additionally, Ms. Redlin works

diligently to develop her own team into future leaders and provide them a path for growth. Colleagues look at Ms. Redlin's high functioning team as a model for their own.

Project Experience

Ms. Redlin has extensive experience in testing soil, soil gas, and groundwater in the context of a real estate transaction, as well as under the supervision of state and federal regulators. Among her specialties is guiding landowners and prospective purchasers through the process of selling or acquiring an environmentally challenged site.

Ms. Redlin has participated in the characterization of groundwater and soil contamination; quarterly groundwater monitoring; implementation of various systems such as soil vapor extraction systems, dual phase extraction systems, ozone sparging, air sparging, pump and treat; and soil excavation projects such as tank removals at several clean-up sites in Los Angeles and Orange County.

Ms. Redlin also has extensive experience in environmental compliance monitoring and biological consulting. She has extensive experience working as an independent contractor for and in conjunction with state and local agencies such as Santa Barbara County Parks, California Department of Fish and Game, California Public Utilities Commission, Los Angeles Water and Sanitation and others. This included monitoring construction activities near sensitive biological receptors; containing, quantifying and reporting any hazardous material spills that occurred; working with construction crews to ensure compliance with environmental permit regulations as well as reporting to interested parties on the progress and compliance of the project.

Distinctions

Real Estate Forum- Woman of Influence 2012

Ms. Redlin was named by the Los Angeles Business Journal for Women Making a Difference in 2010.

Ms. Redlin has been designated a 2009 California Mortgage Bankers Association (CMBA) Future Leader.

Ms. Redlin was named Real Estate Southern California Woman of Influence in 2008 for her role in the area's commercial real estate transactions.

Ms. Redlin was one of only two consultants asked to sit on the Risk Managers Association (RMA) Credit Committee roundtable which discussed the effects of the new Federal All Appropriate Inquiries (AAI) standard on Phase I Environmental Site Assessments.

Ms. Redlin received an Industry Profile of Distinction in Brownfield Renewal.
