

Full Street Closure

A full street closure allows for full activation of the street through landscaping, dining areas, play areas, and public art.

Asphalt art can be used to brighten the street and clearly designate it as a pedestrian plaza.

U-turns only feasible with multi-point turns. Would need to restrict truck access, establish alley as a hammer head, and adequately sign in advance. Details would be worked out with fire in final design.

Commercial loading would likely be accommodated through:

- New yellow curb on side streets, which would likely result in a loss of a handful of parallel parking stalls on perpendicular streets
- Corridor access during early morning/overnight hours.

Full street closure. Barriers to be determined with emergency services during final design.

Intersection could also receive asphalt art treatments.
