Re: 2500 North Hollywood Way
Parking Study
Walker Project No. 37-8910.00

Dear Mr. Villa:

Walker is pleased to submit the following report summarizing Walker's parking research and analysis for 2500 North Hollywood Way.

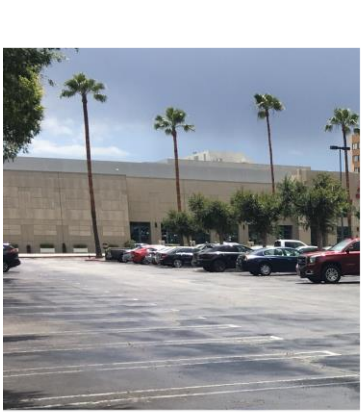

We appreciate the opportunity to be of service to you on this project.

Sincerely,

WALKER CONSULTANTS

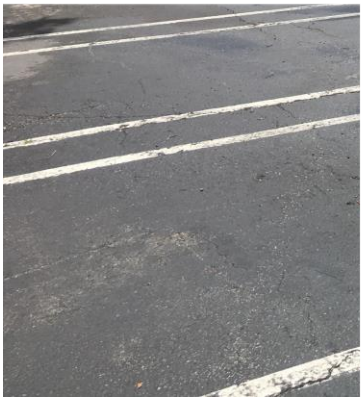

Tania Schleck
Consultant

## INTRODUCTION

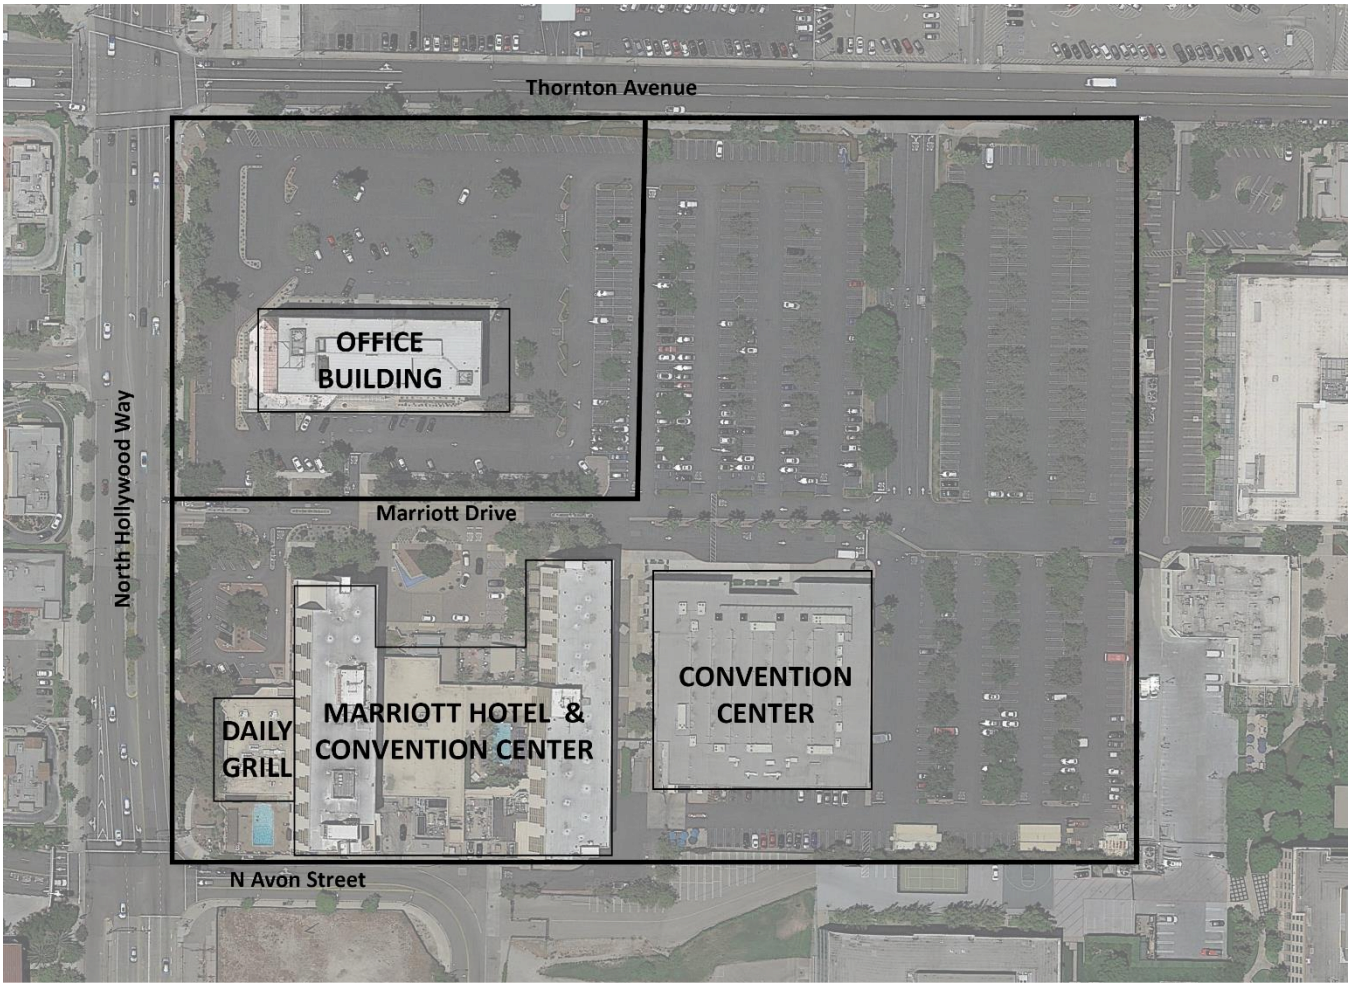

The City of Burbank has engaged Walker Consultants ("Walker") to conduct a parking study for a proposed development project to be constructed at 2500 North Hollywood Way (the "Project Site"), also referred to as the Aloft Residence Inn Dual Brand Hotel (the Project).

The Project Site is currently developed with a Marriott Hotel, Burbank Marriott Convention Center, and 745 surface parking spaces. The existing Marriott Hotel and Convention Center is comprised of 488 hotel rooms, 5,200 square feet of restaurant space, and 46,500 square feet of meeting/banquet and convention space. Approximately four times per year, the Marriott Hotel hosts larger events on the property, resulting in the expansion of the Convention Center area using event tents that are placed on the surface parking lot. The largest event (a media event that occurs annually) utilizes an event tent that is approximately 19,000 square feet. Sufficient parking capacity is provided for these events through the implementation of parking management plans, and/or the securing of off-site parking during the days of each event.

An office building and associated surface parking are located at the southeast corner of Thornton Avenue and Hollywood Way (2550 N. Hollywood Way), immediately adjacent to the Project Site. This property is not a part of the proposed Project. A reciprocal parking and access agreement exists between the Project Site and this property.

Figure 1 shows the Project Site and the abutting property at 2550 North Hollywood Way (both properties combined also referred to as the "Study Area" for this parking study). Given that a reciprocal parking and access agreement exists between the Project Site and 2550 North Hollywood Way, 2550 North Hollywood Way was included in the Study Area to ascertain how the existing parking supply on in the Study Area as a whole is being currently utilized.

Figure 1: 2500 and 2550 North Hollywood Way Study Area

*Source: Base Image - Google Earth Professional, Graphics - Walker Consultants, 2020.*

The Project consists of a proposed dual brand hotel. The hotel is planned to be seven (7) stories tall and will include 420 total rooms (219 hotel rooms operated by Aloft and 201 hotel rooms operated by Residence Inn). The proposed hotel will be accompanied by a detached parking structure.

The hotel will be accompanied by ancillary uses that are expected to generate demand for parking including a 2,022 SF restaurant, 3,690 SF cafe, 1,570 SF coffee shop tenant, 3,371 SF square foot bar/lounge, and 4,137 SF of covered dining space.

There are other uses proposed that are not projected to generate demand for parking. The following ancillary uses will primarily be used by hotel guests and therefore are not projected to generate additional demand for parking: 2,222 SF ground floor event terrace, 1,390 lobby terrace on the first floor, 2,945 SF covered terrace on the first floor, 1,370 SF fitness center, 5,180 SF event space on the terrace level, and 1,500 SF of Conference/Meeting space proposed on the first floor.

As proposed, the Project does not meet the minimum parking requirements of the City of Burbank Municipal Code (BMC). The applicant is requesting a reduction in parking requirements for the Project due to a number of factors

including the shared uses on the Project Site, the proximity of the hotel to Burbank Airport, and trends toward lower parking demand, particularly for hotels, due to increased usage of Transportation Network Companies (TNCs) to access hotels. This is a recognized trend in parking and transportation planning in large metropolitan areas. The purpose of the parking study is to evaluate whether the Project's proposed parking supply (1,185 parking spaces provided within the property boundaries of 2500 North Hollywood Way) can reasonably meet the needs of the Project (Aloft Residence Inn Dual Brand Hotel) and existing uses on the Project Site (Marriott Hotel & Convention Center, and the Daily Grill restaurant).

## METHODOLOGY

To evaluate the parking needs for the existing and future uses Walker performed the following tasks:

1. OBSERVED AND ANAYZED CURRENT CONDITIONS
    - Observed current conditions at the Study Area including collection of field data for parking demand and length of stay for two weekdays and one Saturday.
    - Quantified and analyzed the results of the current conditions data collected.
    - Reviewed and analyzed over one year of hotel occupancy, parking occupancy and event parking data provided by Marriott Hotel management.

2. ESTABLISHED A RECOMMENDED PARKING SUPPLY
    - Conducted a shared parking analysis to determine the recommended parking supply for the Project. Data from observations and the data collected at the current hotel informed the assumptions for this analysis.
    - Combined the observed parking demand with recommended supply (per the shared parking analysis) for the Project to determine an appropriate number of parking spaces to accommodate the combined current and future land uses at the Project Site throughout the day. The purpose of this analysis is to identify the periods of peak demand, and to confirm whether appropriate parking would be provided in order to meet this demand.
    - Evaluated event parking demand based on observations during a special event and an analysis of thirteen months of event data provided by Marriott Hotel staff.

3. *IDENTIFIED RECOMMENDED PARKING AND TRANSPORTATION DEMAND MANAGEMENT STRATEGIES*
    - Evaluated and recommended potential parking management strategies to increase the efficiency (and thereby the capacity) of the proposed parking supply.
    - Evaluated and recommended potential Transportation Demand Management (TDM) strategies to help reduce the proportion of visitors and employees who access the Project Site via Single Occupancy Vehicle (SOV) to enhance parking availability and efficiency.

## SUMMARY OF KEY FINDINGS

### *CURRENT CONDITIONS*

Walker made the following key quantitative findings from the collection and analysis of current parking conditions in the Study Area:

1. EXISTING PARKING SUPPLY IN STUDY AREA (PROJECT SITE AND 2550 NORTH HOLLYWOOD WAY)
    - Walker identified 1,125 parking spaces in the Study Area, 380 spaces of which were at 2550 North Hollywood Way and 745 spaces at 2500 North Hollywood Way (Project Site).
    - Walker found that in addition to the parking supply available within the boundaries of the Project Site, the existing Marriott Hotel and Convention Center operations utilize specific parking areas on 2550 North Hollywood Way through a valet and self- parking operation. This parking is available to the Project Site through a reciprocal parking and access agreement.

2. PERIODS OF PEAK PARKING DEMAND IN STUDY AREA (PROJECT SITE AND 2550 NORTH HOLLYWOOD WAY)
    - Overall, the interval of peak parking demand was observed on Saturday, May 18, 2019 between 9:00PM-10:00PM. At that time, Walker observed 765 parked vehicles (360 spaces were available) in the Study Area.
        - 71 vehicles were parked at 2550 North Hollywood Way: 9 vehicles were parked in sub-area A, 15 vehicles were parked in sub-area B, and 47 vehicles were parked in sub-area C (the hotel valet area). Walker did not observe event-goers parking in sub-area B.
        - 694 vehicles were parked on the Project Site at this time. The demand on this particular evening was largely generated by the Muay Thai event occurring at the Burbank Marriott Convention Center, as well as Marriott Hotel guest demand.
    - On Tuesday, May 21, 2019 the period of peak parking demand occurred between approximately 1:00PM-2:00PM during which time 469 vehicles were parked (656 spaces were available).
    - On Wednesday, May 22, 2019 the period of peak demand occurred between approximately 11:00AM-12:00PM, during which time 537 vehicles were parked (588 spaces were available).

3. TRANSIT OPTIONS AND PARKING MANAGEMENT
    - The Study Area is served well by transit including the BurbankBus System, which picks up and drops off at the hotel on Thornton Avenue, the Bob Hope Airport Metrolink Rail Station located within a ten-minute walking distance of the hotel, and four Metro bus lines.
    - The existing Marriott Hotel has implemented a variety of parking management strategies to help manage parking supply both on a daily basis and during special events. Some of the management practices include:
        - An incremental parking fee of $4.00 every thirty minutes with a daily maximum fee of $24.00, plus tax, for hotel guests and event attendees.
        - Communication prior to special events between the organization hosting the event, Marriott Hotel management and the operations departments in the form of regular meetings.
        - Parking Event Checklist Guidelines for the Marriott Hotel and Convention Center. The checklist summarizes event staffing, pre-event tasks, traffic flow plans, communication, and safety.
        - The Marriott Hotel has a designated, on-site parking area for employee parking.
        - When needed, the Marriott Hotel secures employee parking at off-site locations across the street from hotel. The Marriott Hotel also utilizes off-site parking and a shuttle service

during large special events occurring at the Convention Center to ensure that parking demand is adequately accommodated.

- The existing Marriott Hotel has an informal Transportation Network Company (TNC) drop off located just before the parking entrance off Thornton Avenue.

### *RECOMMENDED PARKING SUPPLY*

Based on the land uses of the proposed development project, the findings of the analysis and the broader study goals, Walker sought to analyze and provide responses to the following:

1. **Recommended number of required parking spaces for the new hotel (420 room Aloft/Residence Inn Dual Brand Hotel):**
   - **271 parking spaces for the projected period of peak demand.** Walker recommends this number of spaces to park the proposed development during the projected (weekday evening) peak demand, based on the methodology outlined in our analysis, using our Shared Parking Model, calibrated with data collected in the Study Area. As a hotel use, the need for parking peaks when all guests have arrived for the evening. The period of peak demand for the Project hotel and ancillary uses is projected at approximately 9:00PM, given the time of day presence factors recommended in the Shared Parking Model.

2. **Recommended number of required parking spaces to accommodate for the new hotel and existing uses at the Project Site – during observed peak parking demand (this assumes a special event at the existing Convention Center in the evening, when hotel parking demand is high):**
   - **1,021 parking spaces for the projected period of peak demand. This results in a 46-space surplus compared to the Effective Parking Supply for the proposed Project (1,067 spaces).**[1] Walker recommends this number of spaces based on observed parking demand during a special event (Muay Thai), the attendance at which was higher than the 85th percentile level of event parking demand at the Convention Center.[2]

3. **Recommended number of required parking spaces to accommodate for the new hotel and the existing uses at the Project Site – during peak parking demand for the office building located at 2550 North Hollywood Way (this assumes a special event at the existing Convention Center in the weekday daytime, when office building parking demand is high):**
   - **925 parking spaces for the projected period of peak demand. This results in a 142-space surplus compared to the effective parking supply for the proposed Project (1,067 parking spaces).** Walker recommends this number of spaces as appropriate to park 85th percentile event parking demand at the existing Convention Center, during peak demand for the office building located at

[1] To account for the need for an extra "cushion" of spaces due to factors such as circulation within the parking area, pedestrians crossing, or mis-parking, Walker applied an 0.90 Effective Supply Factor (ESF) to the proposed Project's parking inventory (1,185 spaces). Methodology for determine the ESF is described further in the Future Conditions section of this report.

[2] For most land uses, shared parking is based on the 85th percentile of peak-hour observations, a standard espoused by the ITE, the NPA's Parking Consultants Council, and renowned parking planners. This 85th percentile is a significant and high threshold to meet in terms of supplying parking capacity in that it is provides a parking supply that will not be needed by a majority of developments. The 85th percentile recommendation is informed by field data counts in the fifth edition of ITE's *Parking Generation* and this threshold represents the 85th percentile of peak-hour observations supplied during the study.

2550 North Hollywood Way.[3] The weekday at approximately 11:00AM peak for office building parking observed during field data collection is consistent with the peaks projected in the Shared Parking Model. Given that a surplus of parking spaces is projected for the Project Site during the weekday daytime, when the adjacent office uses has the highest demand, spillover of parking demand from the uses in the Project Site onto the office parcel is unlikely to occur the majority of the year.

4. It is important to note that the projected surplus of parking spaces assumes that all spaces on the Project Site (1,185 spaces) would be available for parking; where parking demand for different land uses peaks at different times, a material number of reserved spaces can effectively reduce the parking supply.

## *PARKING AND TRANSPORTATION DEMAND MANAGEMENT STRATEGIES*

The proposed parking supply is projected to be sufficient to accommodate a majority of events that occur throughout the year. Walker does not recommend sizing the parking system to accommodate the busiest events of the year, which would result in a significant number of parking spaces sitting empty for most or virtually all the year. Instead, parking management strategies should be implemented during the busiest events to accommodate demand and provide a positive customer service experience for event attendees:

1. Traffic controllers/parking ambassadors shall be provided throughout the facility to direct parkers to open parking spaces.
2. Employees shall be required to park in off-site facilities. Marriott staff indicated that off-site parking facilities are routinely leased for this purpose.
3. For the largest "tent" events that the Marriott Convention Center hosts each year in the existing surface parking lot (approximately four times annually), a majority of event attendees shall be directed to park in off-site facilities and shuttles should be provided to and from the event venue. In instances where off-site facilities are used, signage and/or parking ambassadors should direct parking patrons to these facilities.
4. Valet parking service shall be provided for event attendees. Valet cars should be parked in the planned parking structure and stacked to maximize the parking capacity on-site. Valet service is already provided within the existing parking operation, but vehicle stacking in the garage would increase space capacity.

The following additional parking management strategies shall be considered, to maximize parking capacity during all times of the year:

5. Installing an Automated Parking Guidance System (APGS) for the parking structure to improve parking system efficiency and the ability of parkers to find available spaces on busy days. APGS are dynamic signs that communicate space availability in real-time. An example of APGS signage is provided in Figure 2. As the size of a parking system increases, effective APGS systems improve the efficiency, capacity and customer service experience of a parking system.

[3] The office building was approximately 96% occupied during the times of occupancy counts. To estimate office building occupancy at the time of field work, Walker researched public listings online through online sources, including loopnet.com.

Figure 2: Example of an APGS Sign

*Source: Walker Consultants.*

6. Providing tandem parking spaces to maximize the on-site parking capacity and utilize valet parking.
7. Installing mechanical parking stackers in the planned parking structure to maximize the facility's capacity.

In addition to parking management strategies, the applicant should consider incentivizing those hotel guests and employees, who have reasonable travel and commute options, not to drive, by offering a comprehensive set of TDM measures to provide alternatives to driving alone and parking on the site. The specific TDM strategies recommended are provided in the Parking and Transportation Demand Management Strategies section of this report.

## CURRENT CONDITIONS

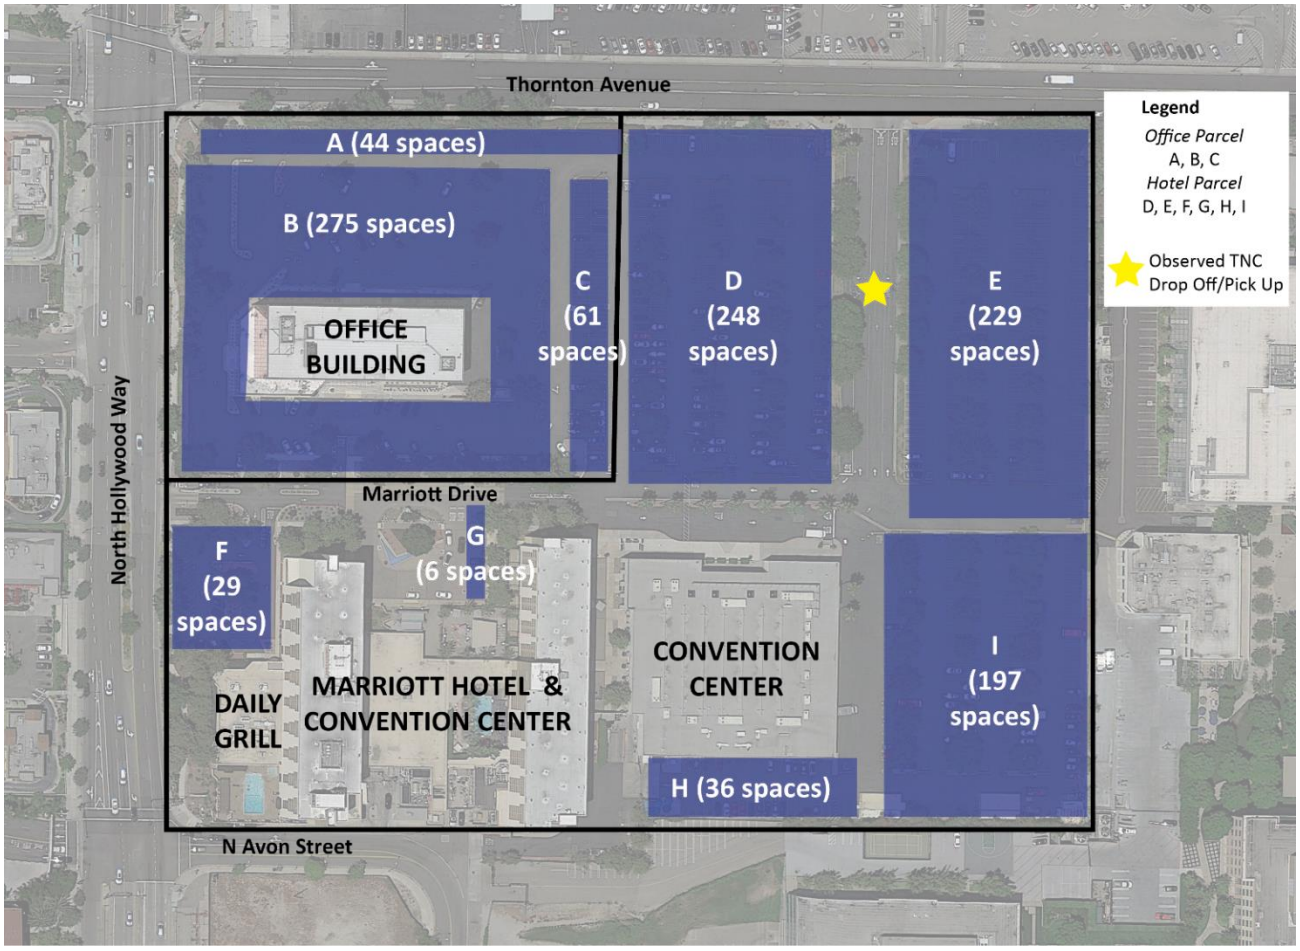

To understand the current parking conditions in the Study Area, Walker conducted three days of field data collection. The objectives of the fieldwork were:

1. To determine the current inventory of parking spaces;
2. To collect a representative sample of annual parking occupancy data for a weekend day and two weekdays; and
3. To collect a representative sample of length of stay data for a weekend day and two weekdays.

### STUDY AREA

Figure 3 shows the Study Area for the data collection. The bold black lines are the approximate property lines, outlining the property at 2550 North Hollywood Way and the Project Site. Walker assigned sub-area letters to the study area to facilitate communication of the study findings.

Figure 3: 2500-2550 North Hollywood Way Study Area

Note: Bold black lines designate the approximate property boundaries. Sub-area A, B, and C are within the property boundaries of 2550 North Hollywood Way. Sub-area D, E, I, H, G, and F are within the property boundaries of the Project Site.

*Source: Base Image – Google Earth Professional, Graphics - Walker Consultants, 2019.*

## PARKING SUPPLY

Walker quantified the parking supply (number of parking spaces) in the Study Area, by sub-area as shown in Table 1. Walker identified a total of 1,125 existing parking spaces in the study area 380 spaces of which are on 2550 North Hollywood Way, and 745 spaces of which are on the Project Site. Parking on 2550 North Hollywood Way was quantified due to the reciprocal access/parking agreement that exists between the two properties.

Table 1: Study Area Existing Parking Supply

| | A | B | C | Total Office Parcel Supply | D | E | F | G* | H | I | Total Hotel Parcel Supply | Total Supply (Office and Hotel Parcel) |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Supply | 44 | 275 | 61 | 380 | 248 | 229 | 29 | 6 | 36 | 197 | 745 | **1,125** |

*Six striped ADA parking spaces in sub-area G.
Note: In sub-areas E and I the parking supply does not include the portion of the supply that was obstructed by trailer parking. The stripes were not visible in these spaces; therefore, were not quantifiable.

*Source: Walker Consultants, 2019.*

Below are additional notes regarding the parking sub-areas and designated user groups:

- Parking spaces striped “white” are designated for Marriott Hotel parking spaces and spaces striped “green” are designated for the existing office building parking spaces.
- The parking spaces in sub-area B are designated for the existing office use, only, and are striped green.
- While sub-areas C and A are within the property boundaries of 2550 North Hollywood Way, they were observed to be used for Marriott Hotel parking due to the reciprocal parking agreement that exists between the two properties. Sub-area A was observed to be used for Marriott Hotel self-parking.
- Sub-area F is a separate gated parking facility, serving the Daily Grill (an existing restaurant on the Project Site).
- Per Walker’s observations and conversations with Marriott Hotel staff, sub-areas I and H are primarily used by Marriott Hotel employees.

## PARKING DEMAND

Walker conducted occupancy counts the following days in the Study Area:

- Saturday May 18, 2019
- Tuesday May 21, 2019
- Wednesday May 22, 2019

These days were selected to quantify both weekend and weekday parking demand at the Study Area. Per the request of the City, the days were selected while Burbank schools were still in session. For all days that parking occupancy data was collected, the existing Marriott Hotel was at least 94 percent occupied.

During each day of field data collection, occupancy counts were conducted every two hours from 9:00AM to 10:00PM, with the last count beginning at 9:00PM. The field work was designed to understand parking demand patterns throughout the day, with an eye toward quantifying peak demand on the site, which was projected to occur with the overlap of event and hotel guest parking demand. Based on presence factors from the Urban Land Institute (ULI) Shared Parking Model (industry standards) we collected peak hotel demand 9:00-10:00PM, a 95% presence interval. As is often done based on a review of our models, we then increased hotel demand numbers

further by an additional 5 percent to project a possible higher demand. Counts during the day helped to determine the peak demand for the office use on the property at 2550 North Hollywood Way – this peak demand was determined in order to identify how the office use in the Study Area overlapped with other uses during these times.

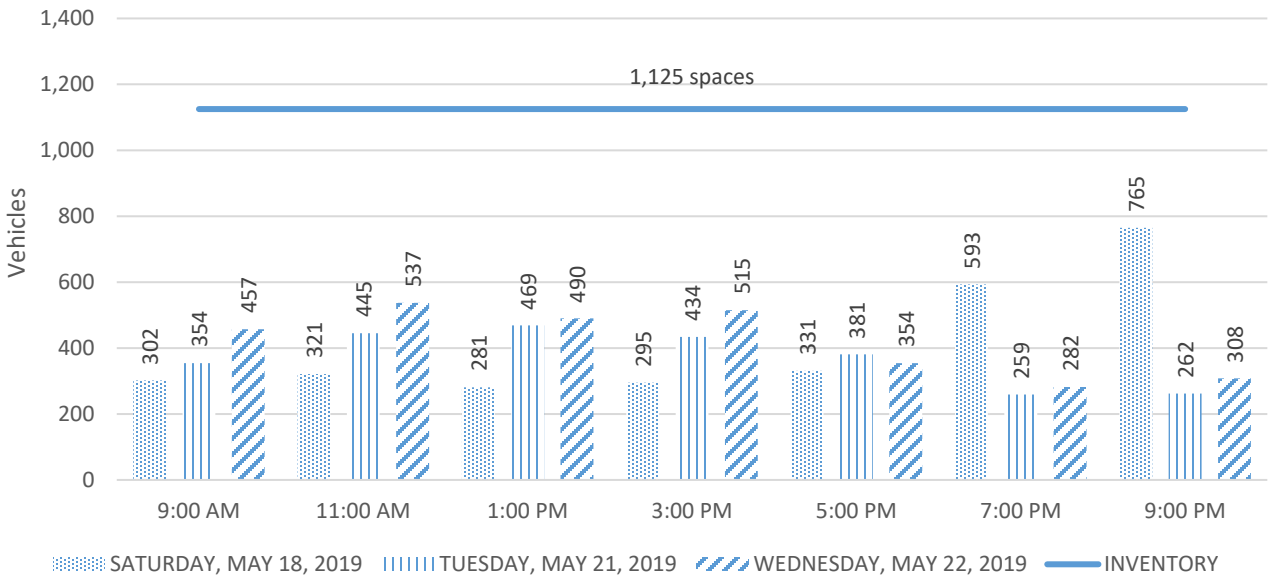

The following sections describe the parking occupancy data on a Study Area-wide basis, followed by a discussion that focuses on each separate sub-area.

Parking occupancy for each day and time collected is included as Appendix A.

## *STUDY AREA PARKING DEMAND*

Figure 4 summarizes parking occupancy totals for May 18, 21, and 22, 2019. Overall, the interval of peak parking demand in the Study Area was observed on Saturday, May 18, 2019, between 9:00PM and 10:00PM. At that time, Walker observed 765 parked vehicles (360 spaces were available). The demand was largely generated by the Muay Thai event occurring at the Burbank Marriott Convention Center.

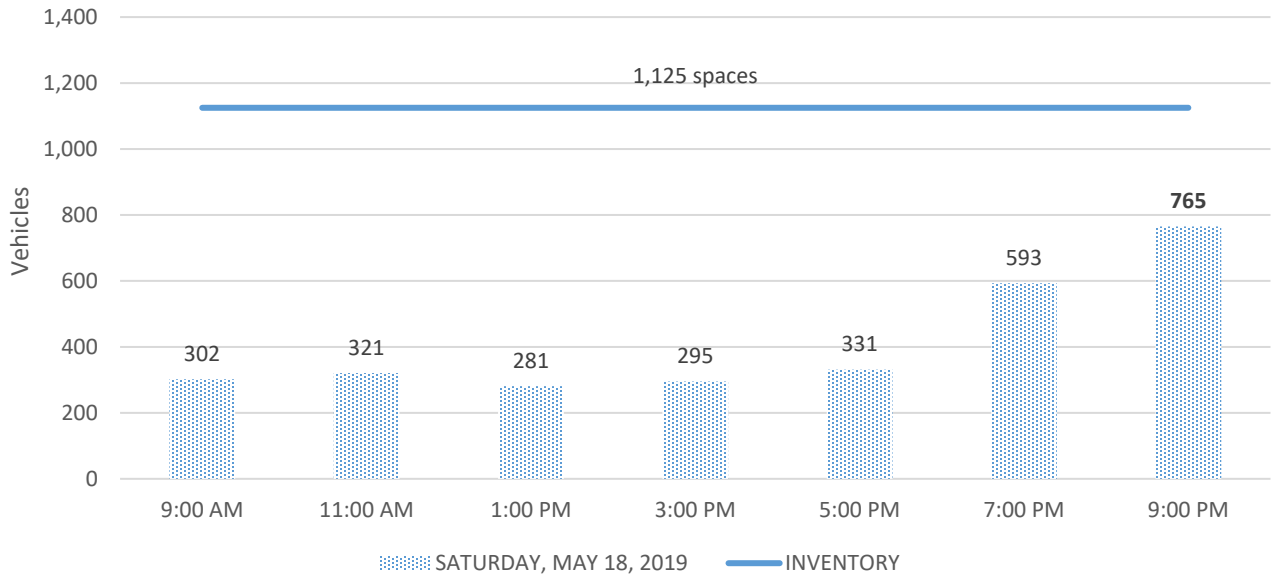

Figure 4: Study Area Occupancy Counts, May 18, 21, and 22, 2019

Source: *Walker Consultants*, 2019.

Figure 5 summarizes the occupancy counts conducted on Saturday, May 18, 2019. As shown in the figure, occupancy was the highest during the 7:00PM and 9:00PM counts, largely due to the Muay Thai event occurring at the Convention Center. Parking demand during Muay Thai was approximately two and a half times greater than on other nights.

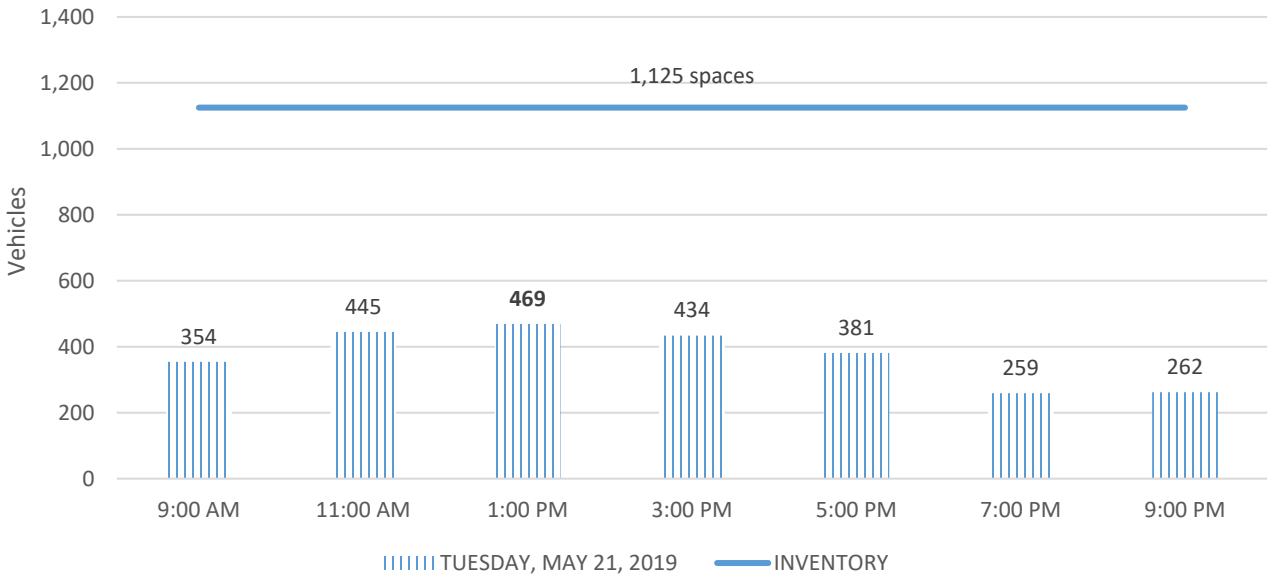

Figure 5: Study Area Occupancy Counts, Saturday, May 18, 2019

Source: *Walker Consultants*, 2019.

Figure 6 summarizes the occupancy counts conducted on Tuesday, May 21, 2019. The period of peak demand occurred at approximately 1:00PM during which time 469 vehicles were parked (656 spaces were available) in the Study Area.

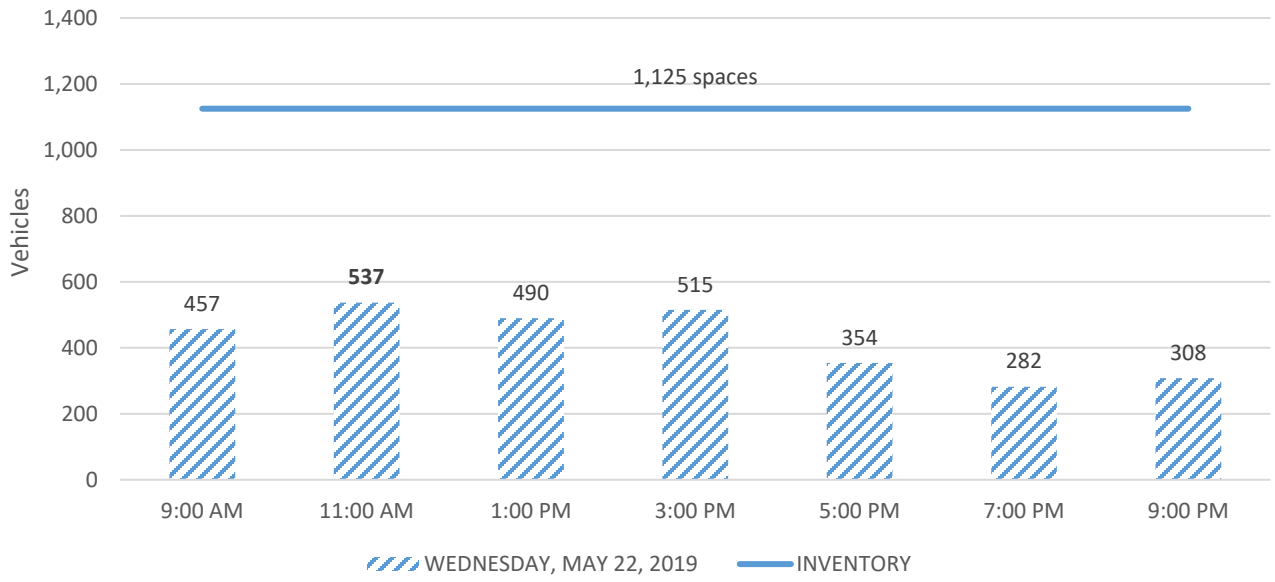

Figure 6: Study Area Occupancy Counts, Tuesday May 21, 2019

Source: *Walker Consultants*, 2019.

Figure 7 summarizes the occupancy counts conducted on Wednesday, May 22, 2019. The interval of peak demand occurred at approximately 11:00AM, during which time 537 vehicles were parked (588 spaces were available) in the Study Area.

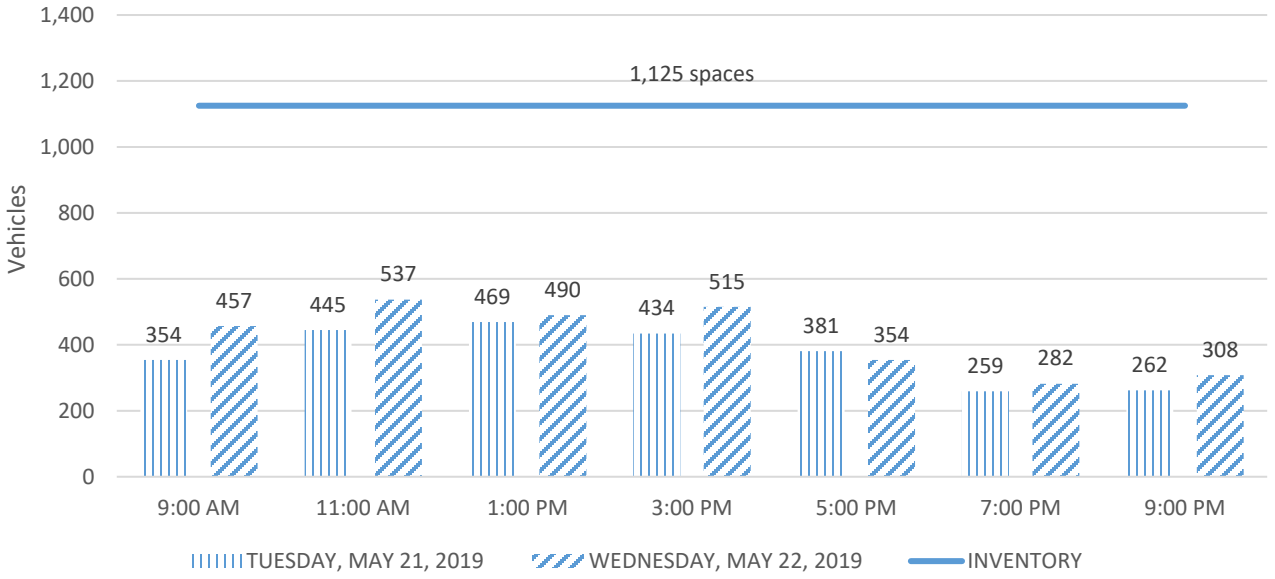

Figure 7: Study Area Occupancy Counts, Wednesday, May 22, 2019

Source: *Walker Consultants*, 2019.

Figure 8 compares the weekday occupancy counts for May 21 and May 22, 2019. Overall, occupancy was higher on Wednesday than on Tuesday (with the exception of at 5:00PM).

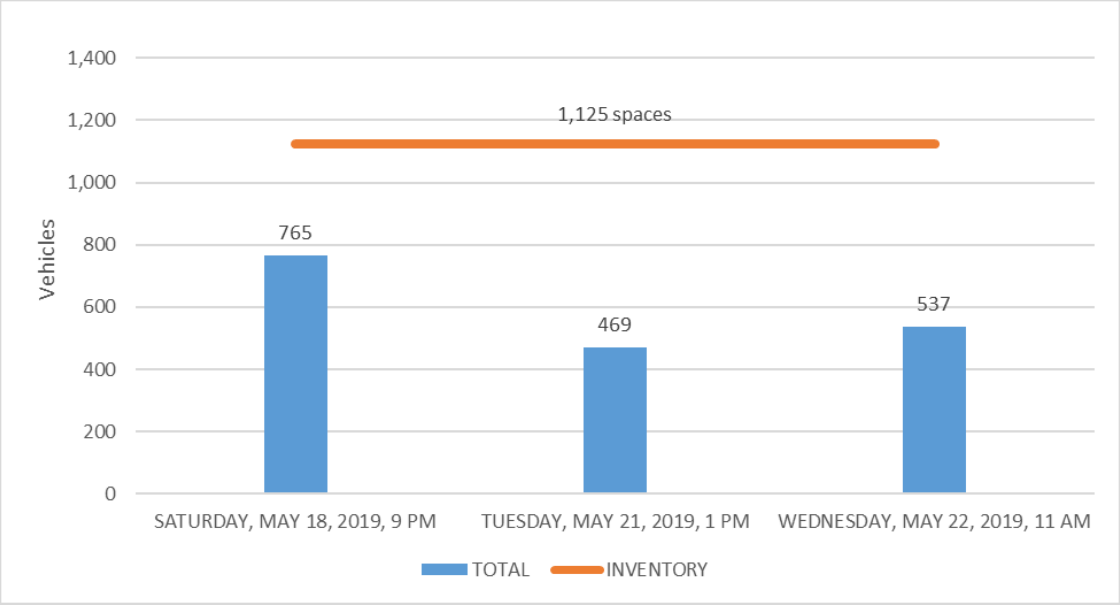

Figure 8: Comparison of Weekday Study Area Occupancy, Tuesday, May 21, 2019 and Wednesday, May 22, 2019

Source: *Walker Consultants*, 2019.

The late morning or early afternoon is typically the period of highest parking demand for office uses.[4] The observed weekday peak demand is likely a reflection of this phenomenon, created by the overlap of high office parking demand coupled with hotel parking demand, even though the overlap of peak office parking demand and hotel parking demand is typically lowest in the early afternoon. Figure 9 compares the intervals of peak demand for May 18, 21, and 22, 2019.

Figure 9: Comparison of Study Area Peak Demand, May 18, 21, and 22, 2019

Source: *Walker Consultants*, 2019.

[4] The office building was approximately 96% occupied during the times of occupancy counts. To estimate office building occupancy at the time of field work, Walker researched public listings online through online sources, including loopnet.com.

## *PARKING DEMAND BY SUB-AREA*

This section discusses the observed parking demand for each sub-area. Table 2 summarizes the parking occupancy by sub-area during period of peak demand each day occupancy counts were conducted.

Table 2: Parking Demand by Sub-area – Peak Parking Demand

| Period of Peak Demand | A | | | B | | | C | | |
|---|---|---|---|---|---|---|---|---|---|
| | Occupancy % | Occupied Spaces | Spaces Available | Occupancy % | Occupied Spaces | Spaces Available | Occupancy % | Occupied Spaces | Spaces Available |
| Sat (9:00PM) | 20% | 9 | 35 | 5% | 15 | 260 | 77% | 47 | 14 |
| Tues (1:00PM) | 25% | 11 | 33 | 83% | 228 | 47 | 31% | 19 | 42 |
| Wed (11:00AM) | 41% | 18 | 26 | 85% | 233 | 42 | 20% | 12 | 49 |
| **Period of Peak Demand** | **D** | | | **E** | | | **F** | | |
| | Occupancy % | Occupied Spaces | Spaces Available | Occupancy % | Occupied Spaces | Spaces Available | Occupancy % | Occupied Spaces | Spaces Available |

| Wed (11:00AM) | 67% | 4 | 2 | 86% | 31 | 5 | 45% | 88 | 109 |

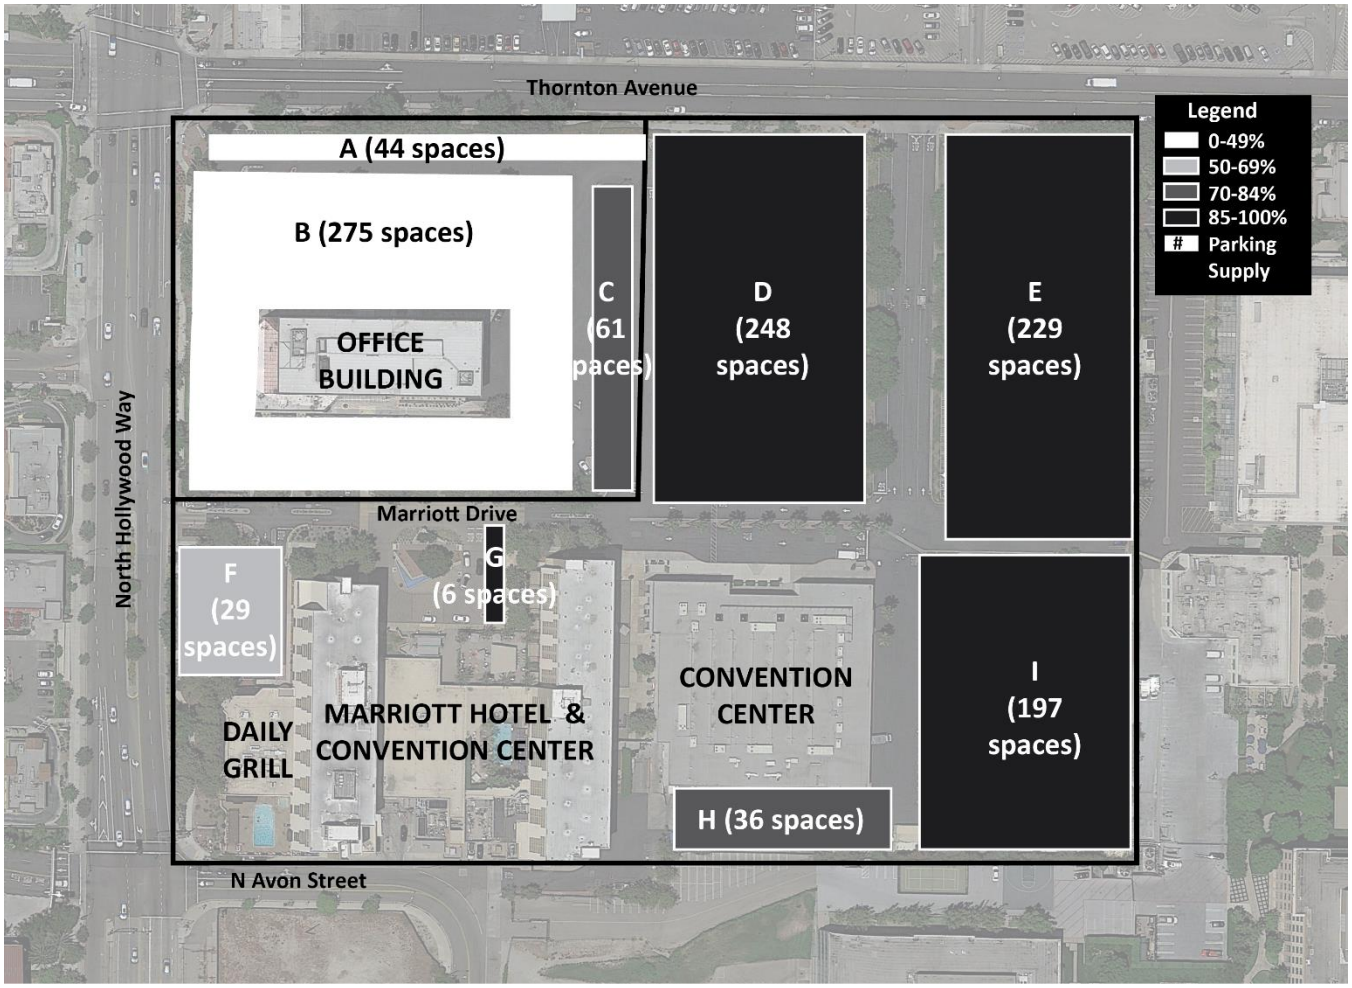

Note: Times display start times for each parking occupancy count.

Source: *Walker Consultants*, 2019.

The maps on the following pages demonstrate the parking demand, by sub-area on a map.

Figure 10 shows the parking utilization observed in the study area during the Saturday peak (9:00PM-10:00PM). As shown in the figure, sub-areas D, E, and I were busy (at least 85% utilized) largely due to parkers accessing the Convention Center for the Muay Thai event.

Figure 10: Parking Utilization – Saturday Peak (9:00PM-10:00PM)

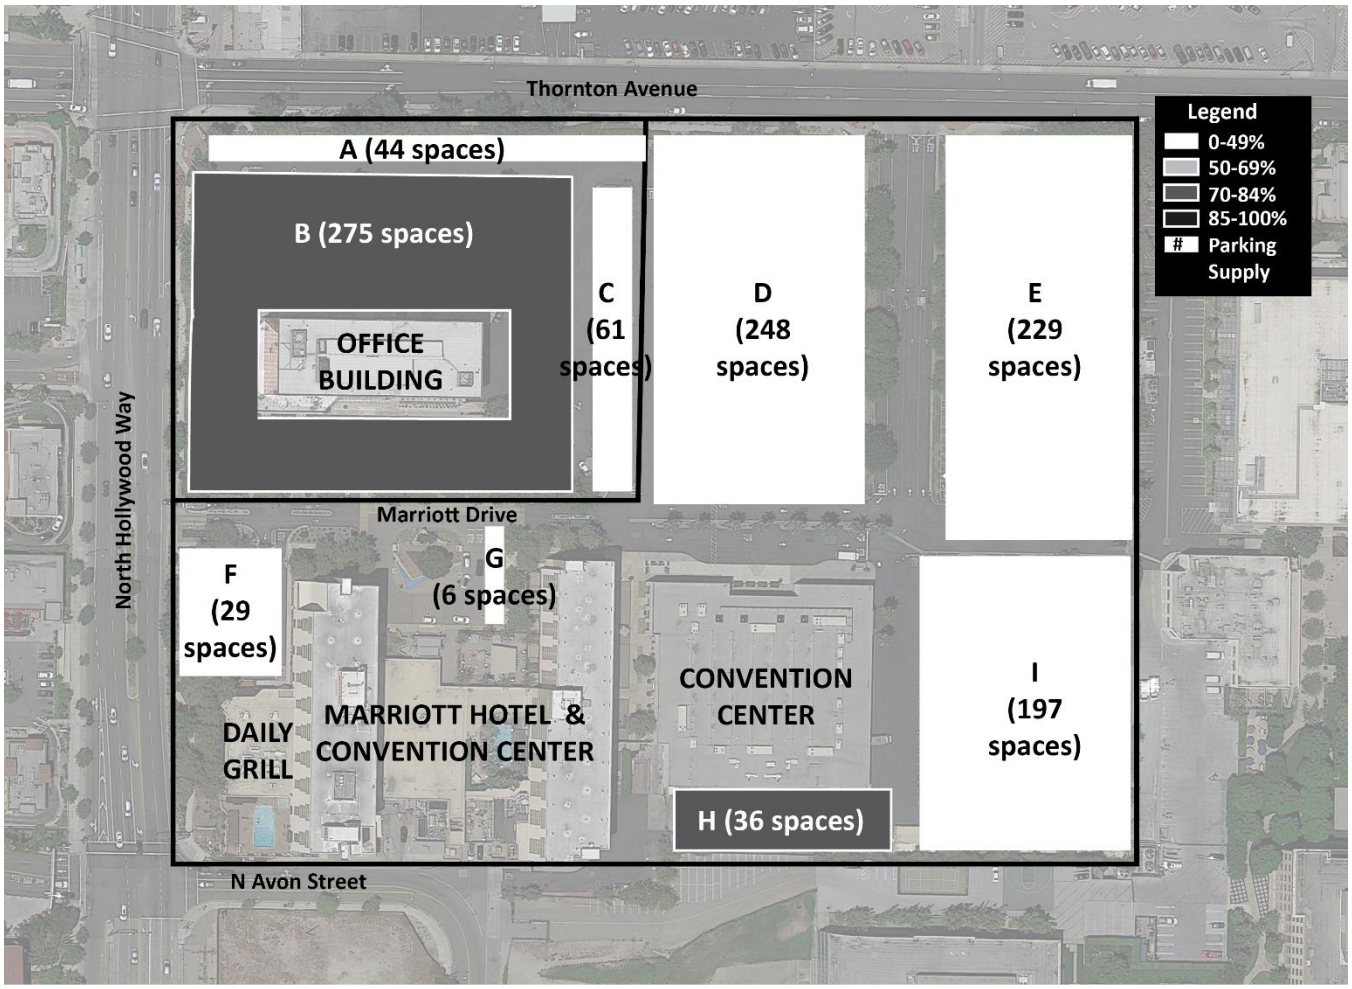

Note: Numbers in each sub-area indicated the total parking inventory of each sub-area.

*Source: Base Image – Google Earth Professional, Graphics - Walker Consultants, 2019.*

Figure 11 displays the parking utilization during the Tuesday peak (1:00PM-2:00PM). As shown in the figure, all sub-areas were less than 50 percent utilized with the exception of sub-area B (primarily office employees) and H (primarily Marriott Hotel employees) were between 70 percent -84 percent utilized.

Figure 11: Parking Utilization – Tuesday Peak (1:00PM-2:00PM)

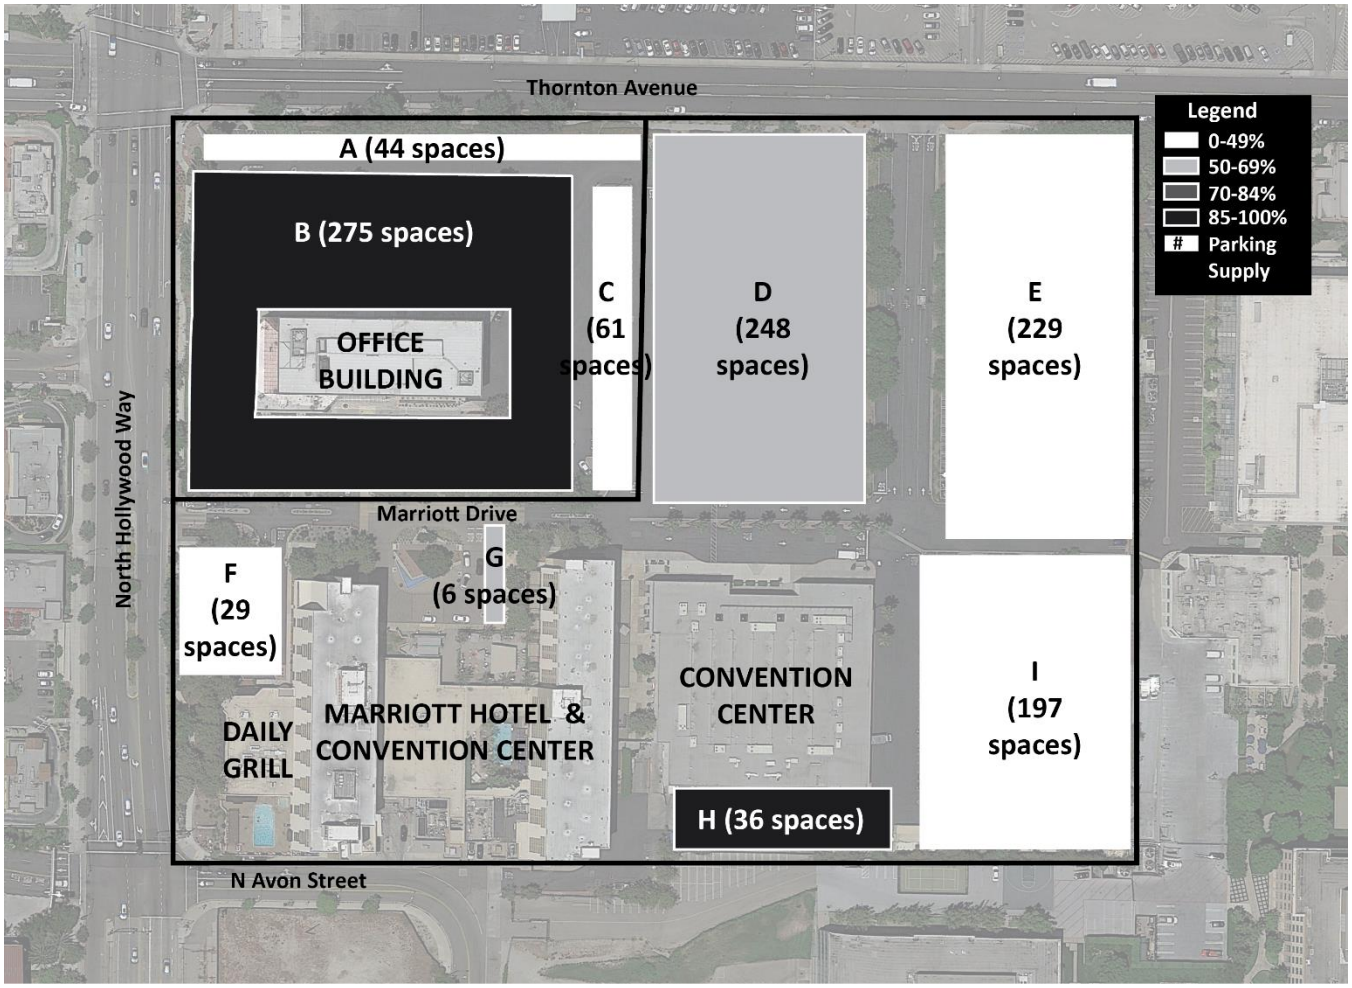

Note: Numbers in each sub-area indicated the total parking inventory of each sub-area.

*Source: Base Image – Google Earth Professional, Graphics - Walker Consultants, 2019.*

Figure 12 shows the parking utilization in the Study Area during the Wednesday peak (11:00AM-12:00PM). As shown in the figure, areas B (primarily office employees) and H (primarily Marriott Hotel employees) were at least 85 percent utilized, while areas A, C, E, I, and F were under 50 percent utilized.

Figure 12: Parking Utilization – Wednesday Peak (11:00AM-12:00PM)

Note: Numbers in each sub-area indicated the total parking inventory of each sub-area.

## *PARKING DEMAND DATA PROVIDED BY MARRIOTT HOTEL*

Marriott Hotel staff provided Walker with 13 months (395 days) of parking occupancy data (May 2018-May 2019) for the parking supply owned by the hotel, included as Appendix B. This occupancy data represents rolling parking occupancy throughout the day, based on the following:[5]

- Daily estimates of Hotel, Restaurant and Towne Park (third-party parking operator) employee complimentary parking which fluctuates with business levels
- Complimentary sales clients and hotels vendors which fluctuates daily with business levels
- Transient paid parking including day rate, overnight stay rate and restaurant validations

Walker had the following key findings from the analysis of this data:

- Of the 395 days of data provided, the 85$^{th}$ percentile level of parking occupancy was approximately 61 percent
- The average parking occupancy was approximately 50 percent
- Occupancy exceeded 60 percent only on event days, except for in three cases (Friday June 15, 2018, Friday September 14, 2018, and Saturday November 3, 2018).

Overall, this data indicated that the Study area tends to have ample parking availability the majority of the year. However, because this data does not represent parking demand at a specific time of day, this data was not the core of Walker's analysis.

[5] Methodology was provided by Marriott Hotel staff.

## PARKING LENGTH OF STAY

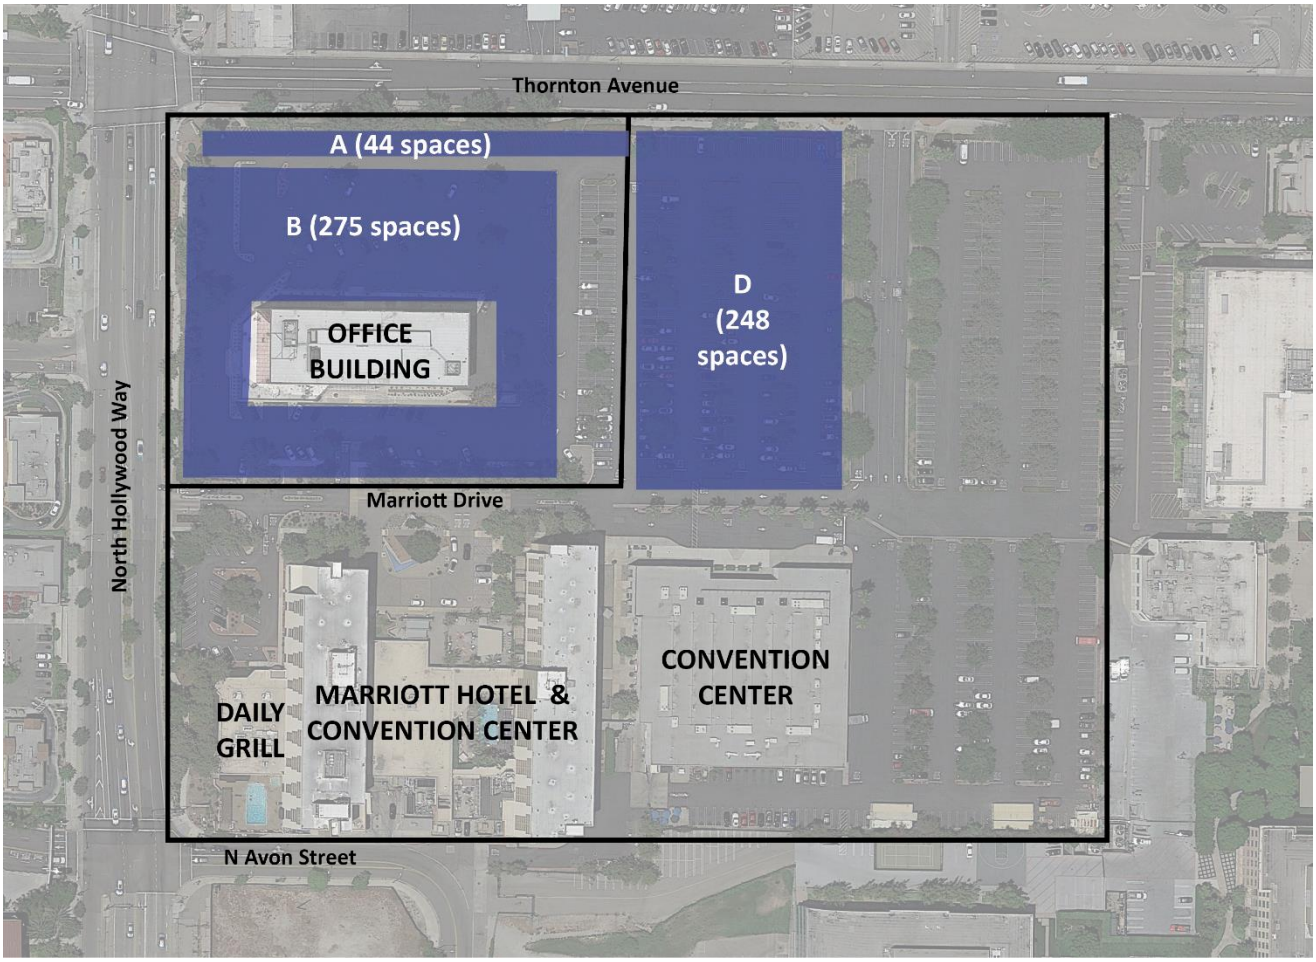

Walker collected length of stay data manually in the Study Area for the purpose of understanding how long vehicles were parked and – to the extent possible – to gain a reasonable understanding of the breakdown of hotel guest, office employee, and visitor parkers. Walker staff surveyed vehicle license plates during the same three days that occupancy was quantified (Saturday May 18, Tuesday May 21, and Wednesday May 22, 2019).

The length of stay analysis is typically performed to identify the extent to which parking users not permitted in certain locations may be encroaching on the availability of parking for different user groups. Based on their locations and preliminary observations of parking patterns in the Study Area, the different user groups did not appear to be competing for parking in sub-area C, as this area is valet-parking, F, as this area is reserved for the Daily Grill, and G, as these spaces area immediately front the hotel use. Sub-areas E, I, and H parked hotel guests and employees, and, when events occurred, event attendees.

Conversely, sub-areas A, B and D (shown in Figure 15) could be reasonable and tempting options for parking different user groups, such as office employees, office visitors, hotel guests and event attendees. Walker performed a license plate inventory of cars parked in these sub-areas during a weekday and a weekend day to assist in determining whether the hotel/event or office employee user group could be impacting parking demand for other parking user groups. To determine the extent to which vehicle length of stay demonstrates that certain parking user groups are inhibiting parking access to designated users, Walker conducted the following analysis:

- Determined approximately how long vehicles were parked in each sub-area during the period of peak parking demand for each day (Saturday May 18, Tuesday May 21, and Wednesday May 22, 2019).
- If possible, used the length of stay data to identify user groups parking in each sub-area.
- If specific user groups were identified, determined the extent to which encroachment was an issue (i.e., if event attendees were observed parking in the office area). We note that length of stay is typically only a concern where parking is in short supply. Therefore, when parking occupancy was observed to be low, encroachment was not determined to be an issue because it does not negatively impact parking availability and access to the site.

Figure 15: Location of Parking Length of Stay Data Collected

Note: Numbers in each sub-area indicated the total parking inventory of each sub-area.

*Source: Base Image – Google Earth Professional, Graphics - Walker Consultants, 2019.*

Length of stay data were collected by recording the last four digits of each license plate every two hours between 9:00AM and 10:00PM.[6] The list of license plate data collected is included as Appendix C.

Even though it is possible that some vehicles may leave and return to the facility, length of stay is indicated by the total number of hours that the vehicle was parked. For example, if an office worker was parked four hours went to lunch, and was parked for an additional three hours, the length of stay would be seven hours.

The following sections summarize the length of stay data during the periods of peak parking demand observed for both the weekend and weekday.

[6] On Saturday, May 18, 2019, length of stay data was shortened due to significant rain on site, limiting the visibility of the license plates. Length of stay data was collected in sub-area A and B from 9:00AM to 7:00PM and in sub-area D from 11:00AM to 7:00PM.

## *WEEKEND LENGTH OF STAY*

### Sub-Area A (Office Parcel)

Sub-area A is located on the property at 2550 North Hollywood Way, but was designated for hotel use during the time in which Walker conducted field work. Table 4 summarizes the length of stay statistics for vehicles parked in sub-area A on Saturday May 18, 2019 at approximately 7:00PM, the period in which peak parking demand was observed.[7]

The following are conclusions from the weekend length of stay analysis in sub-area A:

- Of the 8 vehicles parked at approximately 7:00PM, 5 vehicles had been parked for at least eight hours. The longer length of stay indicates that parkers were long term users, such as hotel guests or employees. It is unlikely office workers were parked in this location, given that the field work was on the weekend when most offices are closed. Additionally, sub-area B is in closer proximity to the office entrance; therefore office workers would be more likely to park in sub-area B than sub-area A. Since there was ample availability observed in sub-area B (7 percent occupancy), it is unlikely office worker would park in sub-area A.
- Given the low demand for parking in sub-area A (18 percent of spaces were occupied), encroachment of parking spaces was not determined to be an issue.

Table 4: Vehicle Length of Stay Data – Sub-area A (Saturday May 18, 2019) 7:00PM

| Length of Stay | Number of Parked Vehicles | Percent of Parked Vehicles |
|---|---|---|
| 8+ hours | 5 | 63% |
| 6-8 hours | 2 | 25% |
| 4-6 hours | 0 | 0% |
| 2-4 hours | 1 | 13% |
| < 2 hours | 0 | 0% |
| **Total** | **8** | 100% |
| *Parking Supply* | *44* | |
| *Parking Utilization* | *18%* | |

Note: The total number of vehicles may differ slightly from the occupancy data described above, as occupancy data was collected before length of stay data was collected.

*Source: Walker Consultants, 2019.*

### Sub-Area B (Office Parcel)

Sub-area B is located on the property at 2550 North Hollywood Way, and was designated for office use. Table 5 summarizes the length of stay statistics for vehicles parked in sub-area B on Saturday May 18, 2019 at approximately 7:00PM.

The following are conclusions from the weekend length of stay analysis in sub-area B:

[7] Due to significant rain, Walker was unable to collect license plate information for the 9:00PM count as the license plates were not visible. 7:00PM was the secondary peak.

- Of the vehicles parked at approximately 7:00PM, 72 percent of vehicles (13 vehicles) remained parked for at least eight hours. Walker observed several vehicles in sub-area B that appeared to be corporate fleet vehicles that were parked for more than eight hours.
- The longer length of stay at 7:00PM suggests that most parkers in sub-area B were not likely event parkers, as the Muay Thai event was an evening event.
- Walker field staff did not observe event parkers in sub-area B.
- Given the low demand for parking in this sub-area (7 percent of spaces were occupied), encroachment of parking spaces was not determined to be an issue. [8]

Table 5: Vehicle Length of Stay Data – Sub-area B (Saturday May 18, 2019) 7:00PM

| Length of Stay | Number of Parked Vehicles | Percent of Parked Vehicles |
|---|---|---|
| 8+ hours | 13 | 72% |
| 6-8 hours | 0 | 0% |
| 4-6 hours | 1 | 6% |
| 2-4 hours | 3 | 17% |
| < 2 hours | 1 | 6% |
| **Total** | **18** | **100%** |
| *Parking Supply* | *275* | |
| *Parking Utilization* | *7%* | |

Note: The total number of vehicles may differ slightly from the occupancy data described above, as occupancy data was collected before length of stay data was collected.

*Source: Walker Consultants, 2019.*

**Sub Area D (Hotel Parcel)**

Sub-area D is located on the Project Site and is designated for hotel use. Table 6 summarizes the length of stay statistics for vehicles parked in sub-area D on Saturday May 18, 2019 at approximately 7:00PM.

The following are conclusions from the weekend length of stay analysis in sub-area D:

- Of the vehicles parked at approximately 7:00PM, 26 percent (40 vehicles) were parked over eight hours and 28 percent (42 vehicles) were parked less than two hours.
- The length of stay results in sub-area D were inconclusive in regards to identifying specific user groups. Vehicles parked longer than eight hours may have been hotel guests who remained on the site or possibly took alternative transportation for the day or hotel employees. Vehicles parked longer than eight hours were likely not Muay Thai event goers, as the Muay Thai event was occurring in the evening. Those with shorter lengths of stay could have been Muay Thai event goers or hotel guests returning for the evening. It is unlikely office workers were parked in this location, given that the field work was on the weekend when most offices are closed. Additionally, sub-area B is in closer proximity to the office entrance; therefore, office workers would be more likely to park in sub-area B than sub-area D. Since there was ample availability observed in sub-area B (7 percent occupancy), it is unlikely office worker would park in sub-area D.

[8] Similar to 7:00PM, the parking occupancy at 9:00PM (peak for the study area) in sub-area B was 15, which is lower than the occupancy observed at 7:00pm. Since most vehicles parked for the event were parked at 9:00PM, this low occupancy suggests there were little to no event goers parked in sub-area B.

- Walker field staff did not observe evidence of specific user groups encroaching on parking spaces in sub-area D.

Table 6: Vehicle Length of Stay Data – Sub-area D (Saturday May 18, 2019) 7:00PM

| Length of Stay | Number of Parked Vehicles | Percent of Parked Vehicles |
|---|---|---|
| 8+ hours | 40 | 26% |
| 6-8 hours | 17 | 11% |
| 4-6 hours | 16 | 11% |
| 2-4 hours | 36 | 24% |
| < 2 hours | 42 | 28% |
| **Total** | **151** | **100%** |
| *Parking Supply* | *248* | |
| *Parking Utilization* | *61%* | |

Note: The total number of vehicles may differ slightly from the occupancy data described above, as occupancy data was collected before length of stay data was collected.

*Source: Walker Consultants, 2019.*

## *WEEKDAY LENGTH OF STAY – PERIOD OF PEAK DEMAND*

**Sub-Area A (Office Parcel)**

Sub-area A is located on the property at 2550 North Hollywood Way, but was designated for hotel use during the time in which Walker conducted field work. Table 7 summarizes the length of stay statistics for vehicles parked in sub-area A on Wednesday May 22, 2019 at approximately 11:00AM, the period in which peak parking demand was observed.

The following are conclusions from the weekday length of stay analysis in sub-area A:

- Vehicles parked at approximately 11:00AM had varying lengths of stay with 47 percent (9 vehicles) parked at least six hours.
- The length of stay results in sub-area A were inconclusive in regard to specific user groups parked. Vehicles parked longer than six hours may have been hotel guests who remained on the site or possibly took alternative transportation for the day or hotel employees. Vehicles parked longer than six hours may have also been office workers, as sub-area B had high utilization at 11:00AM (83 percent), and office parking may have spilled over into sub-area A. Vehicles parked for less than four hours (42 percent, 8 vehicles) could have been visitors to the hotel or office building.
- Given the low demand for parking in this sub-area (43 percent of spaces were occupied), encroachment of parking spaces was not determined to be an issue.

Table 7: Vehicle Length of Stay Data – Sub-area A (Wednesday May 22, 2019) 11:00AM

| Length of Stay | Number of Parked Vehicles | Percent of Parked Vehicles |
|---|---|---|
| 8+ hours | 4 | 21% |
| 6-8 hours | 5 | 26% |
| 4-6 hours | 2 | 11% |
| 2-4 hours | 5 | 26% |
| < 2 hours | 3 | 16% |
| **Total** | **19** | 100% |
| *Parking Supply* | *44* | |
| *Parking Utilization* | *43%* | |

Note: The total number of vehicles differs slightly from the occupancy data described above, as occupancy data was collected before length of stay data was collected.

*Source: Walker Consultants, 2019.*

**Sub-Area B (Office Parcel)**

Sub-area B is located on the property at 2550 North Hollywood Way, and was designated for office use during the time in which Walker conducted field work. Table 8 summarizes the length of stay statistics for vehicles parked in sub-area B on Wednesday May 22, 2019 at approximately 11:00AM.

The following are conclusions from the weekday length of stay analysis in sub-area B:

- Of the vehicles parked at approximately 11:00AM, 60 percent (139 vehicles) remained parked for at least six hours.
- Walker observed several vehicles in sub-area B that appeared to be fleet vehicles that were parked for more than eight hours.
- The length of stay results in sub-area B were inconclusive in regard to specific user groups parked. Most of the vehicles parked for at least six hours were likely office workers. Sub-area D had ample availability during the 11:00AM count (56 percent of spaces were occupied). Since sub-area D had available parking and is in closer proximity to the hotel than sub-area B, it is unlikely that hotel guests were parking in sub-area B to access the hotel. Walker field staff did not observe hotel guests or employees parking at sub-area B and accessing the hotel.

Table 8: Vehicle Length of Stay Data – Sub-area B (Wednesday May 22, 2019) 11:00AM

| Length of Stay | Number of Parked Vehicles | Percent of Parked Vehicles |
|---|---|---|
| 8+ hours | 58 | 25% |
| 6-8 hours | 81 | 35% |
| 4-6 hours | 46 | 20% |
| 2-4 hours | 20 | 9% |
| < 2 hours | 24 | 10% |
| **Total** | **229** | **100%** |
| *Parking Supply* | *275* | |
| *Parking Utilization* | *83%* | |

Note: The total number of vehicles may differ slightly from the occupancy data described above, as occupancy data was collected before length of stay data was collected.

*Source: Walker Consultants, 2019.*

**Sub-Area D (Hotel Parcel)**

Sub-area D is located on the Project Site and was designated for hotel use during the time in which Walker conducted field work. Table 9 summarizes the length of stay statistics for vehicles parked in sub-area D on Wednesday May 22, 2019 at approximately 11:00AM.

The following are conclusions from the weekday length of stay analysis in sub-area D:

- Of the vehicles parked at approximately 11:00AM, 74 percent (102 vehicles) remained parked for at least six hours.
- The length of stay results in sub-area D were inconclusive in regard to specific user groups parked. It is likely that most of the vehicles parked at least six hours were hotel guests or employees rather than office employees. Office employees would be more likely to park in sub-area B, closer to the office building entry. Walker field staff did not observe office employees or office visitors parking in sub-area D.
- Given the relatively low demand for parking in this sub-area (56 percent of spaces were occupied), encroachment of parking spaces was not determined to be an issue.

Table 9 – Vehicle Length of Stay – Sub-area D (Wednesday May 22, 2019) 11:00AM

| Length of Stay | Number of Parked Vehicles | Percent of Parked Vehicles |
|---|---|---|
| 8+ hours | 45 | 33% |
| 6-8 hours | 57 | 41% |
| 4-6 hours | 12 | 9% |
| 2-4 hours | 18 | 13% |
| < 2 hours | 6 | 4% |
| **Total** | **138** | **100%** |
| *Parking Supply* | *248* | |
| *Parking Utilization* | *56%* | |

Note: The total number of vehicles differs slightly from the occupancy data described above, as occupancy data was collected before length of stay data was collected.

*Source: Walker Consultants, 2019.*

## *LENGTH OF STAY CONCLUSIONS*

The following summarizes key findings from the length of stay analysis:

- Length of stay analyses are key where parking availability is limited, because the key question is whether non-authorized parking users are limiting parking availability in the locations under study. In the case of our analysis, this was not the case.
- The length of stay analysis was overall inconclusive in regard to identifying specific parking user groups because virtually all parking sub-areas are open to long-term parkers (such as Marriott Hotel guests and site employees) and short-term parkers (office and hotel visitors).
- Parking encroachment by some users into unauthorized areas was determined not to be occurring because of the ample parking availability throughout the site; because open parking spaces were available in close proximity, for example, to the Marriott Hotel, office and Convention Center front doors, there was no reason for parkers to park anywhere but their designated locations.

- A review and analysis of the combined data and findings from the parking occupancy and length-of-stay analyses suggests that the different parking user groups are not materially impacting the availability of parking for other, unintended user groups:
    - Sub-area A
        - Sub-area A had very low occupancy (less than 45 percent during both the weekday and weekend peaks). Therefore, encroachment of parking spaces was not observed to be an issue.
    - Sub-area B
        - Sub-area B has very low occupancy (7 percent) during the weekend peak. Therefore, encroachment of parking spaces was not observed to be an issue.
        - Most of the vehicles parked in sub-area B during the weekend peak were parked more than eight hours, suggesting few event parkers were parked in sub-area B.
        - The length of stay results for sub-area B during the weekday were inconclusive in regard to identifying specific parking user groups.
        - In Walker's observations, the signage and pavement markings in sub-area B clearly designate the area as office parking, only.
        - Sub-areas D, E and I, which serve the hotel, were observed to have substantial parking availability during the weekday peak (442 combined available spaces), reducing the need for hotel users to park in sub-area B.
        - Occupancy in the Daily Grill lot was very low (approximately 24 percent) during the weekday peak, indicating that it is unlikely for Daily Grill users to park in sub-area B.
    - Sub-area D
        - The length of stay results for sub-area D during the weekend and weekday were inconclusive in regard to identifying specific parking user groups.
        - Sub-area D has relatively low occupancy during the weekday (56 percent); therefore, encroachment of parking spaces was not determined to be an issue.
        - Over the weekend, it is unlikely that encroachment from office users occurred in sub area D, as most offices are closed over the weekend and the low occupancy observed in sub-area B (7 percent), which is in closer proximity to the office building

Parking length of stay data was collected in anticipation that, if parking on the site were full, the length of stay analysis could inform whether or not parking in some locations was being poached by unauthorized users. However, because parking availability was found to always be adequate on the site, the length of stay analysis could not find evidence of some user groups encroaching in unauthorized spaces.

## PARKING MANAGEMENT PRACTICES

The Marriott Hotel and Convention Center has measures in place in order to actively manage the variations in parking demand that occur and the large area of parking that serves the facility. Walker corresponded with facility staff to understand current parking management practices, particularly during special events. This section summarizes their response.

The Marriott Hotel's management is structured with various layers that support the execution of all events each day:

- Sales or Catering Managers contract event needs
- Event Managers detail the specific needs of each event and communicate said needs to operations

- Specific departments execute the event as dictated by the event needs including, Parking, Food and Beverage Outlets, Front Office, Housekeeping, Engineering, Banquets, Audio Visual, Purchasing and Receiving, Security

Verbal communication prior to special events between the client, hotel management and the operations departments takes place via:

- Pre-convention meetings with operations teams
- Pre-convention meetings with the clients
- Client tastings
- Client execution walk through
- Weekly staff meetings
- Weekly operations meetings
- Daily Banquet Event Order meetings
- Daily operation stand-up meetings
- Daily pre-shift department meetings

Written communication between the client, management and operations takes place via:

- Sales Contracts
- Group Resumes
- Banquet Event Orders
- Interdepartmental communication

Within this planning and communication, the Marriott Hotel has developed a Parking Event Checklist Guidelines for the Marriott Hotel and Convention Center specifically. The checklist summarizes event staffing, pre-event tasks, traffic flow plans, communication, and safety.

The hotel has a designated area on the Project Site for employee parking within sub-areas I and H. When needed, the hotel secures employee parking at off-site lots located across the street from hotel. The employee parking area is designed to provide employees parking in out of the way and hard to find spaces that may not ordinarily be used by guests and visitors, thereby making more convenient spaces available to these user groups. Based on Walker's observations, the employee parking areas are reasonable and effective for this purpose.

The following non-Single Occupancy Vehicle transportation options exist at the Marriott Hotel:

- BurbankBus System, which picks up and drops off at the hotel on Thornton Avenue
- Metrolink and Amtrak Rail System, the station for which is located within an approximately 10-minute walk of the hotel
- LA Metro bus lines, four of which stop within a 10-minute walk of the hotel, and which run throughout Burbank, the San Fernando Valley, and Downtown Los Angeles
- Uber and Lyft, which pick up and drop off at the hotel at the entrance off of Thornton Avenue
- Yellow Cab, which picks up and drops off at hotel
- Burbank Airport (BUR), the terminal for which is an approximately ten-minute walk to the property or a short shuttle ride when shuttles are available.

## FUTURE CONDITIONS

This section discusses Walker's analysis of future parking conditions for 2500 North Hollywood Way.

### CITY CODE REQUIREMENTS – PROPOSED HOTEL

The Project consists of a proposed dual brand hotel. The hotel is planned to be seven (7) stories tall and will include 420 total rooms (219 hotel rooms operated by Aloft and 201 hotel rooms operated by Residence Inn). The hotel will also include a 2,022 SF restaurant, 3,690 SF café, and a 1,570 SF coffee shop, 4,137 SF covered dining areas, and 3,371 SF bar/lounge[9]. Table 10 summarizes the currently-available program information and our understanding of the required parking for each land use, per City of Burbank Municipal Code (BMC) §10-1-1408.

Table 10: 2500 North Hollywood Way Land Use Program Proposed Development Code Requirements*

| Land Use | Quantity | Metric | Burbank Municipal Code (BMC) Use Category* | BMC Code Ratio (# spaces) | BMC Code Ratio Metric | Required Parking (# spaces) |
|---|---|---|---|---|---|---|
| Hotel Rooms | 420 | rooms | Hotels and Motels | 1 | per 1 hotel room | 420 |
| Restaurant | 2,022 | SF | (i) Restaurants, cafes, cocktail lounges and bars, which are an integral part of a hotel/motel | 5 | per 1,000 SF GFA | 10 |
| Café (Future Tenant) | 3,690 | SF | (i) Restaurants, cafes, cocktail lounges and bars, which are an integral part of a hotel/motel | 5 | per 1,000 SF GFA | 18 |
| Coffee Shop (Future Tenant) | 1,570 | SF | (i) Restaurants, cafes, cocktail lounges and bars, which are an integral part of a hotel/motel | 5 | per 1,000 SF GFA | 8 |
| Covered Dining Areas | 4,137 | SF | (i) Restaurants, cafes, cocktail lounges and bars, which are an integral part of a hotel/motel | 5 | per 1,000 SF GFA | 21 |
| Bar/Lounge | 3,371 | SF | (i) Restaurants, cafes, cocktail lounges and bars, which are an integral part of a hotel/motel | 5 | per 1,000 SF GFA | 17 |
| **Total Required Parking** | | | | | | **494** |

Notes:

- *BMC Use Category from BMC §10-1-1408.
- The restaurant and future tenant spaces are attached to the hotel, and assumed to be integral components to the hotel.

*Source: Development Review Plans dated 6/27/2019 prepared by AWH Partners, City of Burbank BMC, Walker Consultants, 2019.*

As currently planned, per Walker's calculations, the proposed dual brand hotel at 2500 North Hollywood Way would have a parking requirement of 494 spaces, per the BMC.

### RECOMMENDED SUPPLY – PROPOSED ALOFT RESIDENCE INN DUAL BRAND HOTEL

Walker performed a Shared Parking Analysis of the four proposed land uses included in the Aloft Residence Inn Dual Brand Hotel Project (hotel, restaurant, café, and coffee shop) to develop a recommendation for the parking supply. After briefly discussing the methodology for shared parking, which is what would take place in this case based on the

[9] The following ancillary uses will primarily be used by hotel guests and therefore are not projected to generate additional demand for parking: 2,222 SF ground floor event terrace, 1,390 lobby terrace on the first floor, 2,945 SF covered terrace on the first floor, 1,370 SF fitness center, 5,180 SF event space on the terrace level, and 1,500 SF of Conference/Meeting space is proposed on the first floor.

new hotel, auxiliary uses, convention center and existing Marriott Hotel, this section details the six steps used to develop the recommended parking supply.

Shared parking methodology was developed in the 1980s and has been a widely-accepted industry standard for rightsizing parking facilities over the past 30+ years. Adopted by cities throughout the U.S., and codified in zoning ordinances as an acceptable practice, shared parking is endorsed by the Urban Land Institute (ULI), the American Planning Association (APA), the National Parking Association (NPA), and International Council of Shopping Centers (ICSC), as an acceptable method of parking planning and management.

Shared parking allows for the sharing of parking spaces among uses in a mixed-use environment—in lieu of providing a minimum number of parking spaces for each individual use. Shared parking commonly results in a reduction of required parking spaces. This reduction, which is sometimes significant, depends on the quantities and mix of uses and local code requirements.

Shared parking is defined as the ability to use the same parking resource by multiple nearby or adjacent land uses without encroachment. Shared parking takes into account the parking demand for more than 45 different land uses; the availability and use of alternative modes of transportation; captive market effects[10]; and daily, hourly, and seasonal variations. A Shared Parking Model generates 456 parking demand computations as follows:

- 19 hours during a day, beginning at 6 a.m. and concluding at 1 a.m.
- 2 days per week, a weekday and a weekend day
- 12 months of the year
- 19 x 2 x 12 = 456 different calculations

The recommended parking capacity is derived based on the highest figure generated from these 456 computations. Therefore, the intent is to design for the busiest hour of the year, busiest day of the year, and busiest month of the year, at an 85$^{th}$ percentile level relative to similar properties.

A Shared Parking Analysis begins first by taking the land use quantities of the Project, e.g., number of hotel rooms, and multiplying by a base parking demand ratio and monthly and hourly adjustment factors. All base ratios and hourly and monthly adjustments are industry standards that are based on thousands of parking occupancy studies, vetted by leading parking consultants and real estate professionals, and documented within the *Third Edition* of *ULI/ICSC's Shared Parking (published in 2020).*

Walker, in accordance with standard shared-parking methodology, applies two additional adjustments to the base parking demand ratios, one to reflect an estimate of the local transportation modal split (called the driving ratio) and another to account for the best estimate of captive market effects[11] (called the non-captive ratio). These will all be described in more detail in the sections to follow.

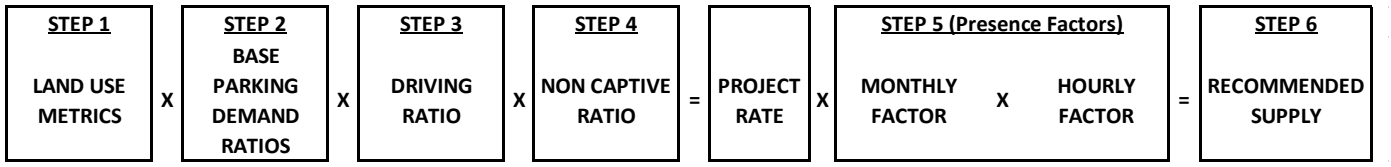

The following graphic provides an illustrative view of the steps involved in the shared parking analysis. This graphic is used within this document to help the reader understand the shared parking process and to also assist in communicating the step of the analysis that is being described within this report. The Shared Parking Analysis section

[10] Recognition of a user group already on site for another primary purpose and not generating incremental parking demand for an accessory use. For example, a sandwich shop located in an office tower generates very little, if any, outside parking demand. Since the parking demand for the office tower tenants has already been accounted for, to avoid double counting, a non-captive adjustment factor is applied to the parking demand calculation for the sandwich shop. In this extreme example, the non-captive ratio may be 0 percent.

[11] Captive market means attendees who are on-site for more than one reason and are not creating additive parking demand.

of this report follows this graphic in consecutive order, moving from left to right, and in subsequent report sections, the gray highlighted section of the graphic designates the step that is being described.

Figure 16: Steps of Shared Parking Analysis

*Source: Walker Consultants, 2019.*

For most land uses, shared parking is based on the 85th percentile of peak-hour observations, a standard espoused by the Institute of Transportation Engineers (ITE), the National Parking Association's (NPA) Parking Consultants Council, and renowned parking planners. This 85th percentile is a significant and high threshold to meet in terms of supplying parking capacity in that it provides a parking supply that will not be needed by a majority of developments. The 85th percentile recommendation is informed by field data counts in the fifth edition of *ITE's Parking Generation*[12] and this threshold represents the 85th percentile of peak-hour observations supplied during the study.

The key goal of a shared parking analysis is to find the balance between providing adequate parking to support a development from a commercial and operational standpoint and protect the interests of neighboring property owners, while minimizing the negative aspects of excessive land area or resources devoted to parking. The ultimate goal of a shared parking analysis is to quantify a recommended number of parking spaces to serve the mix of uses, that will be sufficient in all but exceptionally busy situations, during which a parking plan is typically expected to be put in place.

Allowing multiple land uses and entities to share parking spaces has allowed for and led to the creation of many popular real estate developments and districts, resulting in the combination of office, residential, retail, hotel, and entertainment districts that rely heavily on shared parking for economic viability while providing parking accommodations to meet the actual demand generated by the development. Traditional downtowns in large and small cities alike have depended on the practice in order to be compact, walkable, and economically viable. In the same way, mixed-use projects have also benefited from the shared-parking principle, which offers multiple benefits to a community, not the least of which is a lesser environmental impact due to the reduction in required parking needed to serve commercial developments, as well as the ability to create a more desirable mix of uses at one location, all the while ensuring that parking supply is designed for the busiest hour of the year, busiest day of the year, and busiest month of the year, at an 85th percentile relative to similar properties.

## *ANALYSIS*

In accordance with the accepted shared-use methodology, this section of the report documents the steps taken to appropriately determine a recommended parking capacity for the Project.

[12] Parking Generation, Fifth Edition. Washington DC: Institute of Transportation Engineers, 2019.

### Step 1: Identification and Quantification of Project Land Use Components

| STEP 1 | | STEP 2 | | STEP 3 | | STEP 4 | | | STEP 5 (Presence Factors) | | | | STEP 6 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| LAND USE METRICS | X | BASE PARKING DEMAND RATIOS | X | DRIVING RATIO | X | NON CAPTIVE RATIO | = | PROJECT RATE | X | MONTHLY FACTOR | X | HOURLY FACTOR | = | RECOMMENDED SUPPLY |

### *HOTEL GUESTS AND EMPLOYEES BASE RATIO*

Walker utilized the parking occupancy data collected and described in the Current Conditions section of this report to develop a parking ratio for the Aloft Residence Inn Dual Brand Hotel (the Project). The Burbank Marriott and Convention Center Hotel serves as the most reasonable comparable property to the future hotel as it is an operating hotel located at the same location. Walker suggests that the ratio of parked vehicles per room should be similar for the two hotels.

The first step in determining a site-specific hotel parking ratio was to extrapolate the parking demand generated by the hotel room use from the occupancy counts that Walker performed. As hotel parking demand is typically highest during the evening (when guests are present), Walker utilized data conducted during the 9:00PM occupancy counts, which occurred between 9:00 PM and 10:00 PM. The Muay Thai event was still underway on Saturday May 18, 2019 during the 9:00PM occupancy count, and many of the parked vehicles at this time belonged to event goers. Therefore, Walker evaluated the parking demand during the weekday occupancy counts (Tuesday May 21 and Wednesday May 22), when no major events were occurring at the Convention Center and Marriott Hotel parking demand could more easily be isolated.

Walker assumes that all of the vehicles parked during the 9:00PM weekday counts are associated with Marriott Hotel guests and employees. It is likely that there was some demand generated by other users such as restaurant patrons. Including these user groups as part of the hotel parking ratio will likely result in a slightly higher projection of hotel parking demand. Walker excluded vehicles parked on the Daily Grill lot from this analysis, as this lot is a separate gated parking facility, and unlikely to have hotel parkers.

Table 12 demonstrates the calculations for the hotel parking ratio based on observed parking demand for the Marriott Hotel and Convention Center and occupancy data provided by Marriott. On Tuesday May 21, the observed hotel parking ratio was 0.48 vehicles per occupied hotel room. On Wednesday May 22, the observed hotel guest room parking ratio was 0.58 vehicles per occupied hotel room. In Walker's professional judgement, these ratios are reasonable given the transit options, proximity of the site to the airport, and the fact that the site has paid parking.

Table 12: Hotel Guests and Employees Parking Ratio Calculation

| Date and Time of Occupancy Count | Observed Parking Demand* | X | Hotel Guest Presence Factor** | = | Adjusted Hotel Demand | / | Number Occupied Rooms | = | Hotel Vehicles/ Occupied Hotel Room |
|---|---|---|---|---|---|---|---|---|---|
| Tuesday May 21 - 9:00PM | 221 | | 95% | | 233 | | 484 | | 0.48 |
| Wednesday May 22 - 9:00PM | 255 | | 95% | | 268 | | 460 | | 0.58 |

*Observed parking demand includes all the vehicles parked on the hotel parcel with the exception of the Daily Grill lot. Occupancy also includes vehicles parked in sub-area C and sub-area A on the office parcel that are currently designated for hotel use. Vehicles parked in sub-area B on the office parcel was excluded as Walker did not observe hotel guests parking at this location.
** Walker applied a 95 percent presence factor (recommended in the ULI Shared Parking Model) to the observed parking demand at the hotel to reflect peak parking conditions.

*Source: Walker Consultants, 2019.*

For this analysis, Walker utilized the Wednesday May 22 hotel guest room parking ratio as it is higher than the Tuesday ratio. Walker received 13 months of hotel occupancy data (May 2018-May 2019) for the existing hotel, attached as Appendix D. On average, the weekday hotel occupancy was similar to the weekend hotel occupancy. Additionally, the Shared Parking Model recommends the same base parking ratio for hotel guests during the weekday and over the weekend. Therefore, Walker applied the same hotel guest parking ratio for the weekday and the weekend.

Table 13 summarizes the base parking ratios used for all the land uses in this analysis. The hotel employee, hotel restaurant, and hotel restaurant employee base ratios are recommended by *Shared Parking, 3rd Edition (published in 2020).*

### Table 13: Base Parking Generation Ratios

| User Group | Weekday | Weekend | Unit |
|---|---|---|---|
| Hotel Guests and Employees | 0.58 | 0.58 | /hotel room |
| Hotel Restaurant, Café, Coffee Shop | 6.67 | 7.67 | /SF |
| Hotel Restaurant, Café, Coffee Shop Employees | 1.20 | 1.33 | /SF |

*Hotel Guests and Employees Ratio derived as shown in Table 12 above. ULI Shared Parking Model recommended base parking ratios were utilized for Hotel Restaurant, Café, Coffee Shop patrons and employees.

*Source: Walker Consultants, 2019.*

### Step 3: Application of Driving Ratio

| STEP 1 | | STEP 2 | | STEP 3 | | STEP 4 | | | STEP 5 (Presence Factors) | | | STEP 6 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| LAND USE METRICS | X | BASE PARKING DEMAND RATIOS | X | DRIVING RATIO | X | NON CAPTIVE RATIO | = | PROJECT RATE | MONTHLY FACTOR | X | HOURLY FACTOR | = RECOMMENDED SUPPLY |

*Source: Walker Consultants, 2019.*

A driving ratio adjustment is the percentage of patrons, employees, and hotel guests that are projected to drive to the site in a personal vehicle, expressed as a ratio. This excludes all non-driving modes of transportation including shuttle bus, taxi, ride-hailing (Lyft/Uber), walking, and carpooling passengers. A driving-ratio adjustment of 63% was applied for restaurant patrons which is based on recommendations from data collected for *Shared Parking 3rd Edition (published in 2020).*

For restaurant employees, Walker applied a 75 percent drive ratio based on data from the 2013-2017 American Community Survey 5-Year Estimates Means of Transportation to Work by Selected Characteristics.

### Step 4: Application of Non-Captive Ratio

| STEP 1 | | STEP 2 | | STEP 3 | | STEP 4 | | | STEP 5 (Presence Factors) | | | STEP 6 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| LAND USE METRICS | X | BASE PARKING DEMAND RATIOS | X | DRIVING RATIO | X | NON CAPTIVE RATIO | = | PROJECT RATE | MONTHLY FACTOR | X | HOURLY FACTOR | = RECOMMENDED SUPPLY |

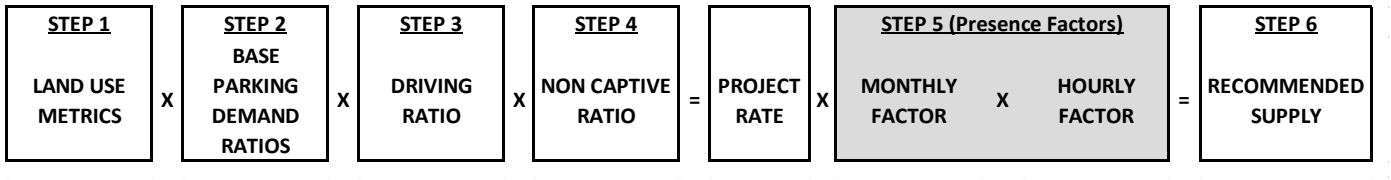

*Source: Walker Consultants, 2019.*

A shared parking analysis recognizes that people often visit two or more land uses housed within the same development site, without increasing their on-site parking use. For example, a hotel guest who has lunch at one of the Project's restaurants and arrived by automobile creates parking demand for one, not two parking spaces. A non-captive ratio allows for an adjustment to the parking needs analysis by taking into account the portion of on-site visitors who are already accounted for as office or resident parking demand and are therefore not creating additional parking demand. In this example, the restaurant demand is captive to the Marriott Hotel guest room demand and therefore

care must be taken in the shared parking analysis to avoid double counting. This double counting is avoided by applying what is referred to as a "non-captive ratio," the inverse of a captive ratio, and which therefore only counts those cars parked specifically for the intended uses.

The non-captive ratios used in this analysis are based on the non-captive subroutine built into the Shared Parking Model. The non-captive subroutine uses data gathered by ULI members regarding the interaction between various land uses and varies slightly among the four scenarios in this analysis.

### Step 5: Application of Presence Factors

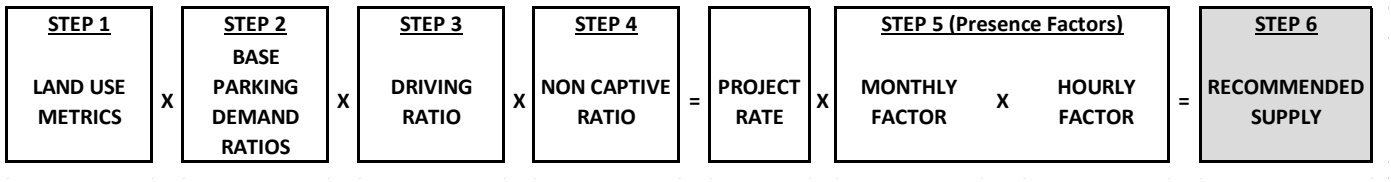

*Source: Walker Consultants, 2019.*

After the Project's land uses have been quantified and standard or base parking generation ratios have been applied to these land use quantities, adjustments are made to account for parking demand variability by hour of day and month of year. This is referred to as a "presence" adjustment.

Presence is expressed as a percentage of peak potential demand modified for both time of day and month of the year. The fact that parking demand for each component may peak at different times generally means that fewer parking spaces are needed for the Project than would be required if each component were a freestanding development.

### Step 6: Total Recommended Parking Supply

*Source: Walker Consultants, 2019.*

Table 14 shows the recommended parking supply to serve the Aloft Residence Inn Dual Brand Hotel (the Project). during the period of peak parking demand (weekday at approximately 9:00PM). The projected period of peak demand is based on the time of day presence factors for hotels as recommended in the Shared Parking Model. Based on the model output, the number of parking spaces recommended to serve the new Aloft Residence Inn Dual Brand Hotel (Project) is 271+ parking spaces.

Table 15 shows the recommended supply to serve the Project during the weekday day (during the peak hour observed by Walker during the weekday, when office demand is highest) The recommended parking supply during the weekday at approximately 11:00AM is 212+ parking spaces.

Table 14: Proposed Hotel – Recommended Supply – Overall Peak – Weekday 9:00PM

| Land Use | Project Data | | X | Base Rate | X | Driving Ratio | X | Non-Captive Ratio | = | Project Rate | Unit | X | Peak Hr Adj | X | Peak Mo Adj | = | Recommended Supply - 9PM (weekday) |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Quantity | Unit | | | | | | | | | | | 9 PM | | August | | |
| Hotel Guests and Employees | 420 | keys | | 0.58 | | 100% | | 100% | | 0.58 | keys | | 95% | | 100% | | 231 |
| Restaurant Patrons | 14,790 | sf GLA | | 6.67 | | 63% | | 90% | | 3.78 | ksf GLA | | 67% | | 99% | | 37 |

| | | | | | | | | | | | | | | | Total | | 212 |

*Source: Walker Consultants, 2019.*

## RECOMMENDED SUPPLY – 2500 NORTH HOLLYWOOD WAY

The next step in the analysis is to overlay the recommended supply for the Aloft Residence Inn Dual Brand Hotel (the Project) and ancillary uses with the demand for parking from the existing land uses on the Project Site (2500 North Hollywood Way). It is assumed in this study that the reciprocal parking agreement between the Project Site and the property at 2550 North Hollywood Way may not continue in the future. The parking proposed on the Project Site is intended to accommodate the parking needs of both the existing Marriott Hotel and Convention Center (and ancillary uses) and the proposed hotel, the Aloft Residence Inn Dual Brand Hotel (the Project) (and ancillary uses).

### *RECOMMENDED SUPPLY – EVENT PARKING CONDITIONS*

The existing Marriott Hotel and Convention Center frequently hosts special events during both the weekday and weekend. Therefore, event parking demand is an important factor in determining the recommended parking supply to serve the Project Site.

Marriott Hotel staff provided Walker with 13 months (May 2018-May 2019) of event data for the existing Convention Center, attached as Appendix E. Walker analyzed this data to determine typical event attendance at the Convention Center.

Key to an analysis of parking adequacy is a definition of the parking "design day", the conditions for which the parking and transportation system is sized (the adequate number of spaces determined). A design day is established to identify the demand for parking during a busy special event at the Convention Center, neither the busiest day (which would be too large for sizing the parking system) or an average day (which would be inadequate to accommodate half the event days of the year).

The parking system is not sized for the busiest day(s), which is (are) likely to include large events or other aberrations, because spikes in demand tend to be large and sizing the system for such spikes will result in large areas of asphalt or structures sitting empty for hundreds of days a year. Special operations plans are undertaken to address these spikes, as Marriott Hotel management implement currently, for major events. Subsequently, Walker evaluated the 85th percentile level of event attendance.

The following were key findings from this event data:

- The overall average daily attendance for the days in which events were hosted was 422 attendees.
- For all event days, the 85th percentile event attendance was approximately 879 attendees.

### *RECOMMENDED SUPPLY – 85TH PERCENTILE EVENT – PEAK OBSERVED DEMAND - EVENING*

Walker evaluated the recommended parking supply to accommodate the current and future uses on the Project Site during the evening, when Marriott Hotel demand is typically the highest and during an 85th percentile level of event attendance at the Convention Center. To calculate recommended supply for the existing uses on the Project Site during an 85th percentile event at the Convention Center, Walker utilized occupancy data collected during the overall peak parking demand for the study area (on a Saturday between 9:00PM-10:00PM during the Muay Thai special event). Walker utilized the following assumptions:

- Special event attendance at the 85th percentile event day = 879+ attendees. All vehicles parked, even when events are staggered throughout the day, are parked at the same time.[13]
- Muay Thai attendance = 1,000+ attendees.
- The Muay Thai event represents a 90th percentile event, which is higher than the 85th percentile industry standard.

The observed parking demand for the uses at 2500 North Hollywood Way during the Muay Thai event was 750+ vehicles (parking demand generated by the current hotel and Muay Thai event). **Adding in the recommended supply to serve the Aloft Residence Inn Dual Brand Hotel (the Project) (271+ spaces), the recommended supply to serve the current and future uses on the Project Site (2500 North Hollywood Way), is 1,021+? spaces, as shown in Table 16.**

Table 16: Recommended Supply – 2500 North Hollywood Way - 85th Percentile Event - Evening

| Observed Peak Parking Demand - Weekend 9PM (during Muay Thai)* | | Recommended Supply - Future Hotel and Ancillary Uses | | Total Recommended Supply - Current and Future Hotel and Ancillary Uses (85th Percentile Event - Evening) |
|---|---|---|---|---|
| 750 | + | 271 | = | 1,021 |

*Observed parking demand was during Muay Thai which represents approximately 90th percentile event attendance at the Convention Center. Observed parking demand includes all vehicles parked in the study area except for sub-area B on the office parcel. Sub-area B on the office parcel was excluded as Walker did not observe hotel guests or event attendees parking at this location.

*Source: Walker Consultants, 2019.*

[13] Since the special events are occurring throughout the day, with different start and stop times, it is likely that not all parkers are present at the same time.

To evaluate the surplus/deficit of parking spaces, it is important to consider the concept of effective parking supply.

For the proper functioning of a parking system, a number of parking spaces are needed beyond the number of vehicles parked. Some spaces must be available for reasonable ease of circulation and a level of service to drivers that does not require an onerous search for parking. In addition, at any given time, a portion of a parking system's spaces will be unavailable for parking for reasons that may include repairs, maintenance to a parking facility or area, mis-parked and oversized vehicles occupying more than one space, and utilizing space for other purposes such as construction staging or storage. Vehicular and pedestrian traffic can also render parking spaces unavailable - as a motorist waits for another driver to vacate a parking space or for pedestrians to walk by, empty spaces ahead may remain unused as vehicles queue.

Additionally, the configuration of spaces within a parking system can lead to underutilized spaces. Motorists may miss spaces obscured by columns or other structures and/or be reluctant to use spaces that appear difficult to navigate. The effective supply takes these conditions into account, demonstrating how many spaces are effectively available to the public.

To account for the need for an extra "cushion" of spaces, Walker applied an Effective Supply Factor (ESF) to the proposed Project's parking inventory. An effective supply factor is a multiplier, typically between 0.85 and 1.0 that accounts for how efficiently user groups use parking spaces designated for their use in a parking system. Generally, user groups that are familiar with a parking system, such as employees, will have a higher effective supply factor while groups less familiar with a parking system, such as customers, will have a lower effective supply factor. Where land and space is at a premium (for example a major event), realistically the effective supply factor (ESF) will be high. For a higher level of service or where providing parking is not a challenge, it can be assumed lower.

An ESF of 0.90 for example, means that a parking area (such as a structure or a lot) with an inventory of 100 spaces will effectively have a supply of 90 parking spaces. That is, at a given time, Walker projects that approximately 90 spaces will be available for use. At the Project Site, the determination of the effective supply factors for a parking system are informed by Walker's experiences with similar projects and the observations of field staff whom collected the data.

An ESF of 0.90 was used for this analysis, which is typical for primarily customer-serving off-street parking facilities. Employee-serving facilities tend to have a higher ESF factor (typically 0.95). Walker typically applies a high ESF (typically 1.0) for events, as there is an expectation that parking will be busy during events and it may be harder to find a space. However, given that event sizes will vary, Walker applied a 0.90 ESF factor for the Project Site. Table 17 summarizes the effective supply calculation for the proposed supply on the Project Site, which results an effective supply of 1,067 parking spaces.

Table 17: Proposed Project Site Effective Parking Supply

| Proposed Project Site Parking Supply | | Effective Supply Factor | | Effective Parking Supply |
|---|---|---|---|---|
| 1,185 | * | 0.90 | = | 1,067 |

*Source: Walker Consultants, 2019.*

**Comparing the recommended parking supply and the effective parking supply for the Project Site, Table 18 displays the projected surplus of parking at the Project Site (46+ spaces).**

Table 18: 85th Percentile Evening Event Surplus/Deficit

| Proposed Supply | | Total Recommended Supply - Current and Future Hotel and Ancillary Uses* | | **Projected Surplus (85th Percentile Event - Evening)** |
|---|---|---|---|---|
| 1,067 | - | 1,021 | = | **46** |

*Recommended supply developed based on observations during Muay Thai, an event that represents approximately a 90th percentile level of event attendance.

*Source: Walker Consultants, 2019.*

## *RECOMMENDED SUPPLY – 85TH PERCENTILE EVENT– WEEKDAY DAYTIME*

In addition to identifying the recommended parking supply in the weekday evening period – when hotel parking demand is typically the highest – Walker evaluated the recommended parking supply to accommodate the existing Marriott Hotel and Convention Center (and ancillary uses) and the proposed hotel, Aloft Residence Inn Dual Brand Hotel (the Project) (and ancillary uses) on the Project Site during the weekday daytime peak period. The weekday daytime period of peak observed parking demand for the Study Area (both the Project Site and 2550 North Hollywood Way) occurred on a Wednesday at approximately 11:00AM when the office use at 2550 North Hollywood Way was highly utilized. To determine the recommended parking supply to accommodate the land uses on the Project Site at this time, when the adjacent office use is the busiest and during an 85th percentile event at the Convention Center, Walker utilized the following assumptions:

- There were no major special events occurring at the Convention Center during the time of Walker's weekday observations.[14] Walker assumes the observed parking demand during the weekday peak was non-event related.[15]
- Special event attendance at the 85th percentile = 879 attendees. All vehicles parked for the 85th percentile weekday event day, even when events are staggered throughout the day, are assumed to be parked at the same time.[16]
- Attendee per vehicle ratio is 2.15, as calculated in Table 19, below.

To evaluate weekday event parking demand, Walker first calculated an attendee per vehicle parking ratio based on observations during the weekend Muay Thai event. The calculation for the attendee per vehicle is shown in Table 19.

[14] Several smaller events occurred at the Convention Center on May 22, 2019. Attendance for each event was 200 or less.
[15] It is likely that there was parking demand generated by events during the weekday observations. Assuming no event demand was present during the weekday observations will result in a slightly higher estimate of non-event parking demand.
[16] Since the special events are occurring throughout the day, with different start and stop times, it is likely that not all parkers are present at the same time.

Table 19: Attendees per Vehicle Calculation

| Observed Hotel and Event Vehicles (Saturday 9:00PM)* | | Assumed Hotel Vehicles | | | Vehicles associated with the Hotel and the Event*** | | Total Event Parking Demand | | Event Attendees per Vehicle | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | | occupied hotel rooms | 466 | | | | | | number of attendees | 1000 | |
| | | vehicles per occupied room** | 0.58 | | | | | | / total event parking demand | 466 | |
| **732** | **-** | **272** | | **+** | **6** | **=** | **466** | | | **=** | **2.15** |

*Observed parking occupancy includes vehicles parked on the hotel parcel with the exception of the Daily Grill lot, which is separately gated. Occupancy also includes vehicles parked in sub-area C and sub-area A on the office parcel that are currently designated for hotel use. Sub-area B on the office parcel was excluded as Walker did not observe hotel guests parking at this location.
**Vehicles per occupied room calculated in Table 12, above using an observed hotel guest room parking ratio of .58 vehicles per occupied from Walker's data collection efforts.
***Marriott staff communicated that approximately 10 hotel rooms were blocked off for the Muay Thai event. All other event attendees were assumed to be local and not staying in the hotel. The vehicle per attendee parking ratio of 0.58 (observed hotel guest room parking ratio) was applied to the 10 rooms: 0.58X10 = 6 vehicles.

*Source: Walker Consultants, 2019.*

The recommended parking supply for event parkers can be summarized in Table 20.

Table 20: Recommended Parking Supply – Event Parkers – 85th Percentile Weekday Event

| Event Attendance (85th Percentile Event)* | | Attendees per vehicle | | Recommended Parking Supply for Event Parkers |
|---|---|---|---|---|
| 879 | / | 2.15 | = | 409 |

*Source: Walker Consultants, 2019.*

The next step is to add the projected weekday event parkers for a busy event to the peak weekday observed demand and project recommended supply during the weekday daytime. **The recommended supply to accommodate the uses in the Project Site during a typical busy daytime parking conditions, when a large event is occurring is 925 parking spaces. Compared with the proposed effective parking supply for the Project Site (1,067 spaces), there is a projected surplus of 142 parking spaces, as shown in Table 21.**[17] Given that a surplus of parking spaces is projected for the Project Site during the weekday daytime, when the adjacent office uses has the highest demand, spillover of parking demand from the uses in the Project Site onto the office parcel is unlikely to occur the majority of the year.

[17] To account for the need for an extra "cushion" of spaces due to factors such as circulation within the parking area, pedestrians crossing, or mis-parking, Walker applied an 0.90 Effective Supply Factor (ESF) to the proposed Project's parking inventory (1,185 spaces).

Table 21: Recommended Supply– 2500 N Hollywood Way –85th Percentile Event – Weekday

| Recommended Parking Supply for Event Parkers | | Observed Weekday Non-Major Event Parking Demand (11AM)* | | Future Hotel Recommended Supply (Weekday 11AM) | | **Total Recommended Supply - 85th Percentile Weekday Event** |
|---|---|---|---|---|---|---|
| 409 | + | 304 | + | 212 | = | **925** |

| Effective Parking Supply | | Total Recommended Supply - 85th Percentile Weekday Event | | **Projected Surplus (85th Percentile Weekday Event)** |
|---|---|---|---|---|
| 1,067 | - | 925 | = | **142** |

*Observed parking demand includes all vehicles parked in the study area except for sub-area B on the office parcel. Sub-area B on the office parcel was excluded as Walker did not observe hotel guests or event attendees parking at this location.

## PARKING AND TRANSPORTATION DEMAND MANAGEMENT STRATEGIES

This section discusses potential parking and Transportation Demand Management (TDM) strategies that the Project applicant can consider implementing to maximize the parking capacity on the site.

### PARKING MANAGEMENT STRATEGIES

The following parking management strategies should be considered to help maximize the parking supply in the study area.

#### *Parking Management Strategies during Large Special Events*

As discussed in the Future Conditions section of this report, Walker projects that there will be adequate parking to accommodate a majority of the special events occurring at the Convention Center. For the large weekend events that exceed the 85$^{th}$ percentile level of attendance (approximately 879 attendees), Walker recommends that parking is actively managed on site to ensure event goers are able to access the property. Below are strategies that should be considered:

- Traffic controllers/parking ambassadors should be placed throughout the facility to direct parkers to open parking spaces. Guests should first be directed to park in the parking structure, starting with the top level, to reduce the amount of circling parking patrons need to do to find parking.
- All employees should be required to park off-site in the facilities the Marriott already leases.
- For the largest "tent" events that the Convention Center hosts each year (approximately four events/year), off-site parking spaces should be leased and shuttles should be provided to and from the event venue.

#### *Automated Parking Guidance System*

To improve the efficiency and ability for parkers to find available spaces on busy days, Walker recommends the installation of an Automated Parking Guidance System (APGS) for the parking structure. Providing parking availability will promote the usage of the structure of by demonstrating the availability. This will reduce the amount of circling for parking spaces in the surface parking lot.

There are three main levels of counting detail for consideration that must be determined to design the system. These include a count by:

- Facility Count APGS – count points at the entry and exit lanes to the facility to provide a total count of available spaces.
- Level Count APGS – count points at entry exit and on ramps to each level to provide a count of available spaces on each level within the facility.
- Individual Space APGS – monitoring each individual space within the garage to track available parking by space within the facility.

Appendix F has more detailed information about the three key types of APGS systems.

### *Tandem Parking Spaces*

Tandem parking is permitted, with certain restrictions, as specified in the BMC Section 10-1-1401: Tandem Parking.[18]

There are three methods that can be employed for tandem parking spaces.

- Full valet
- Valet assist
- Tandem parking agreements

### *Full Valet*

Full valet parking is what most people associate with the term "valet;" parking patrons drop off their vehicles at a central location and valet operators take the vehicle keys and park the vehicle. The Marriott Hotel and Convention Center currently offers full valet service.

Full valet service is often recommended for visitors, as the services provide an added level of customer service. Valet attendants can act as parking ambassadors, greeting guests and providing directions.

If full valet is implemented if the new hotel is built, Walker recommends that the parking structure be utilized to park vehicles. This will free up surface parking spaces which tend to be more convenient, and the first choice for customers to park.

### *Valet Assist Spaces*

Valet Assist parking is utilized in facilities where there is no single drop off point; instead, parkers will self-park their vehicle in the drive aisle (and/or tandem spaces, if applicable) as directed by the attendant and then allow the attendants access to their vehicles' keys. This enables the attendants to have the ability to move vehicles as needed to allow drivers, whose vehicles are blocked, to exit. Valet Assist is recommended when there is an opportunity to increase capacity by utilizing the aisles or tandem spaces for additional parking. This works as follows:

- Customer drives in to parking lot, valet greets customer and directs them where to park.
- Customer gives valet their keys and valet gives customer a claim check and tags the keys with corresponding credential.
- Valet-only moves vehicle if needed to provide access to vehicles that are blocked in.
- No valet vehicles will be parked in front of ADA spaces ensuring they are always available for ADA customers.

Valet assist parking is often recommended for employees as employees drive directly to the parking space, expediting ingress. Employees are often more familiar with the parking facility; therefore, would be more familiar with how the system works.

[18] Tandem parking spaces may be provided for the following uses if the spaces are properly marked and not more than two (2) cars in depth, and the parking plan is approved by the Community Development Director: Major hotel developments of 300 rooms or more, whereby the parking system used is a "valet type" operation, where keys to the car are left with an attendant or in the car and an attendant is on duty at all times.

### *Tandem Parking Agreements*

An alternative to valet-assist parking is the establishment of tandem parking permits/agreements. Tandem parking permits/agreements allow for two users with similar schedules to share the tandem spaces and be responsible for managing how they park in and exit out of the parking spaces.

Tandem parking agreements tend to work best for employee serving parking area, with designated shift changes. Additionally, the applicant can consider designating a certain area of the parking facility for hotel employee parking and establishing tandem parking agreements at that location. A combination of valet/attendant and permits/agreements could also be done.

During non-peak times, when the tandem spaces are not needed and attendants are not in place, signage should be installed explaining to the parker to not park in the front portion of tandem spaces, lest their vehicles become blocked in.

### *Mechanical Stackers*

Utilizing mechanical vehicle stackers could increase parking space within the parking structure. An example of a vehicle stacker is shown in Figure 17:

Figure 17: Example Vehicle Stacker

Source: *Tada*

Vehicle stackers could increase capacity, though the capital costs and on-going costs for attendants to operate the stackers could be a deterrent. An attendant is required to assist customers in utilizing the stackers.

## TRANSPORTATION DEMAND MANAGEMENT (TDM) STRATEGIES

In addition to parking management strategies, the Project applicant should consider incentivizing hotel guests and employees not to drive by offering a comprehensive set of TDM measures to reduce driving alone and parking demand at the hotel property:

- Hire or engage a TDM coordinator to develop, manage, and promote a comprehensive TDM program.
- Developing extensive information and marketing materials to educate, communicate, and promote alternative commute modes, and TDM programs.
- Providing personalized commute planning to all employees and education about alternative options.
- Providing free or discounted transit passes for all regional transit services, including the local BurbankBus system and Metrolink.
- Providing financial incentives or subsidies for employees taking transit to work, because the parking space they do not use has real financial value to the property. One potential strategy is to provide a parking card with a monetary value (essentially a declinating card). Employees then receive a certain monetary reward for each day they elect not to park.
- Providing financial incentives or subsidies for carpooling and vanpooling, as well as preferential parking on-site, and administration support information and maintenance of carpooling and vanpooling arrangements.
- Instituting an Emergency Ride Home (ERH) program so those taking alternative transportation know they have a guaranteed ride home in case of emergency or illness.
- Providing a financial incentive to those that walk or bike to work, similar or equivalent to incentives for transit riders, carpoolers, and vanpoolers.
- Providing secure and convenient parking for bicycles and other personal mobility devices.
- Providing changing rooms and showers for those that bike and walk to work. These conveniences are increasingly provided at work places and could be incorporated into new and potentially existing buildings.
- Conducting annual evaluations of TDM program to measure participation and refine strategies.

TDM measures that can be implemented for guests and visitors include:

- Continue to lease parking space at off-site parking facilities and providing shuttle service to and from the parking facility to the hotel, especially during special events.
- Provide a designated and signed drop off/pick up area for Transportation Network Vehicles (TNC's such as Uber and Lyft) on the property to facilitate or promote increased usage of TNC's to access the hotel.
- Provide a credit or reward for using a TNC service to get to and from the hotel.
- If not already offered, provide a shuttle service to Burbank Airport, and an app to request trips, estimate arrival times and trip planning.
- Implement a bike share program for hotel guests or participate in local and regional programs by providing credits or access codes for trips in existing programs.
- Implement a car share program for hotel guests, such as Zipcar, and/or provide a fleet of electric vehicles that can be checked out by guests.
- Provide information about options for getting around the local area on hotel website, on a welcoming email to guests when making hotel reservations, on-site during registration, and in hotel rooms.
- Install a "transit screen" on the hotel lobby and/or guest rooms to provide real-time information about all alternative travel options available to guests.

## AUTOMATED PARKING GUIDANCE SYSTEMS (APGS)

There are three basic levels of automated parking guidance: 1. Facility Status, 2. Level Space Availability, and 3. Single Space Monitoring, which are listed in order of effectiveness and cost to implement, with each system building on the previous level.

### FACILITY APGS

A Facility Count APGS informs customers if spaces are available in the parking facility but does not guide the customer to a level or space. This is the most basic type of count system informing customers only if spaces are available somewhere in the facility. Facility Count APGS systems can use loops, ultrasonic, or camera-based detection for counting. Figure 1 provides an example of a Facility Count APGS system.

Figure 1: Example Facility Count Dynamic Signage

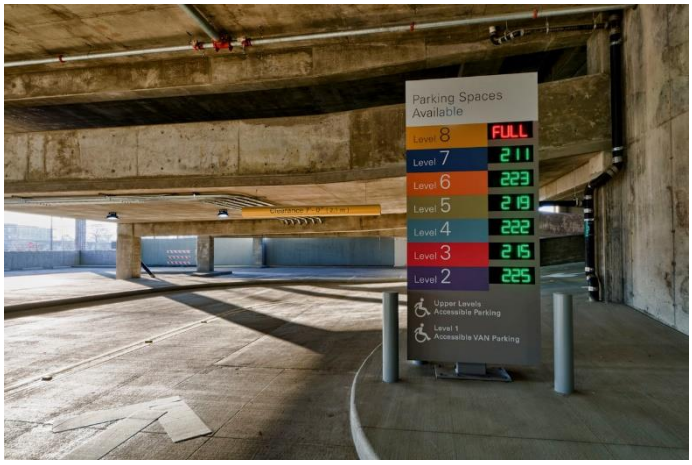

Source: *Seattlegov.com,* 2018

## LEVEL COUNT APGS

Level Count APGS informs customers if space is available in a facility, and on what level, though it does not guide the customer to a specific open space. This type of system builds on a Facility Count APGS, which guides the customer to a facility that has open spaces. Level Count APGS systems can use loops, ultrasonic, or camera-based detection for counting. Level Count APGS expands on the entry and exit lane count points to the garage by adding count points on the ramp leading to each level.

## SINGLE SPACE APGS

Single Space APGS provides space availability information by utilizing colored LED lights to show whether spaces are open or full and can also provide space restrictions (ADA, reserved, etc.). This type of system builds on the Facility Count and Level Count APGS and informs customers if any single space is available in a facility, on what level, and guides the customer to the open space.

Figure 3: Example of Single Space Detection APGS

**Ultrasonic sensor**

Left: Integrated sensor and light example

Bottom Right: Separate sensor, ceiling mount example

**Camera Based Sensor**

Typically runs down center of drive and includes integrated LED lights to indicate status of space.

Top Right: Sensor example
Bottom Right: Sensor example
