**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

EXECUTIVE SUMMARY

Western Environmental Engineers Company (WEECO) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by **US Metro Bank** for the property located at **1130 W. Olive Avenue, Burbank, California (the “subject property”)**. The Phase I Environmental Site Assessment is designed to provide **US Metro Bank** with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

On March 16, 2021, WEECO investigator (Han sol Yoo) conducted a site investigation of the subject site.

Property Description:

The subject property located at 1130 W. Olive Avenue, in the City of Burbank, is legally described by the assessor’s parcel number: 2446-027-040. According to the Los Angeles County, Office of the Assessor, the subject property is an approximately 24,100 square-foot lot, and has been developed with one (1) commercial building approximately 8,695 square feet in size. The subject building was constructed in 1957, respectively.

The subject property is currently occupied by “Urgent Care Center”, “Law Office”, and “Delon Chocolates”. The subject property consists of one (1) single-story commercial building. Onsite operations consist of a medical facility, office, and chocolate store. In addition to the current structure, the subject property was improved with an asphalt paved parking area. A storage garage was observed at the subject property.

According to available historical sources, prior to 1955, the subject property was occupied by vacant / undeveloped land and dwellings. From 1960 to 2020, the subject property has been occupied by a medical building.

The immediately surrounding properties consist of a residential development (Residential / 1100 W. Olive Avenue) to the north; commercial developments (Commercial and “Western Sleep Center, Align Chiropractic, and Western Neurological” / 1150 and 1218 W. Olive Avenue) to the south; residential developments (Residential / 1111 W. Angeleno Avenue and 118 S. Virginia Avenue) to the east; and recreational development (“George Izay Park” / 1111 W. Olive Avenue) to the west across Olive Avenue.

The adjoining properties to the South and West are listed in the HAZNET regulatory database reports.

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

The above referenced HAZNET facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject property.

Based upon information provided by the LACDPW Hydrologic Records Section, the nearest municipal production well is located approximately less than half a mile northwest of the site and is owned by the LADWP (LACDPW #3872H). The well is active, and had a reported depth to groundwater of 88.20 feet bgs (LACDPW, 2020).

Federal and State Environmental Records Search Databases:

The facility, “West Olive Medical Center”, is listed in the HAZNET regulatory database report. According to the Waste Generator Summary, the facility generated metal sludge, and photochemicals/photoprocessing waste.

No reported properties within the specified search radii are identified to pose a significant environmental risk to the Property.

FINDINGS

A recognized environmental condition (REC) refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any recognized environmental conditions during the course of this assessment.

A controlled recognized environmental condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any controlled recognized environmental conditions during the course of this assessment.

A historical recognized environmental condition (HREC) refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting

**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by WEECO, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any environmental issues during the course of this assessment.

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

WEECO has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of **1130 W. Olive Avenue, in the City of Burbank, Los Angeles County, California** (the “subject property”). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions or environmental issues in connection with the subject property. Based on the conclusions of this assessment, WEECO recommends no further investigation of the subject property at this time.

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

1.0 INTRODUCTION

Western Environmental Engineers Company (WEECO) has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located **1130 W. Olive Avenue, in the City of Burbank, Los Angeles County, California** (the “subject property”). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 PURPOSE AND OBJECTIVE

The purpose of this practice is to define good commercial and customary practice for conducting an *environmental site assessment* of a parcel(s) of *commercial real estate* with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. As such, this practice is intended to permit a *User (Client, Purchaser, Lender, Owner)* to satisfy one of the requirements to qualify for the *innocent landowner, contiguous property owner, or bona fide prospective purchaser* limitations on CERCLA liability (hereinafter, the “*landowner liability protections*,” or “*LLPs*”): that is, the practice that constitutes “*all appropriate inquiry* into the previous ownership and uses of the *Property* consistent with good commercial or customary practice” as defined at 42 U.S.C. §9601(35)(B).

Another purpose of this *ESA* is to assist the *Client*, in its underwriting of a proposed mortgage loan on the *Property*, if this *Report* is prepared as a part of a pre-financing environmental due diligence, and to identify *Recognized Environmental Conditions (RECs)* in connection with the *Property* described in this *Report*.

The ASTM Standard Practice E1527-13 defines a *Recognized Environmental Condition (REC)* as the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to *release to the environment*; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. Conditions determined to be *de minimis* generally do not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *Recognized Environmental Conditions* or *Controlled Recognized Environmental Conditions*. *De minimis conditions* are not *Recognized Environmental Conditions*.

Controlled Recognized Environmental Condition (CREC) is a *Recognized Environmental Condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

A Historical Recognized Environmental Condition (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

1.2 SCOPE OF WORK

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. WEECO contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, WEECO researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 LIMITATION

WEECO warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. WEECO believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, WEECO cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM, include the following: ACMs, LBP, radon, lead in drinking water, wetland, and mold. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 7.3.

**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

1.4 USER RELIANCE

Western Environmental Engineer Company (WEECO) has performed a Phase I Environmental Site Assessment for the property located at **1130 W. Olive Avenue, Burbank, California (Subject Property)**. This report has been prepared for the sole use of **US Metro Bank (Client)**.

An environmental site assessment meeting or exceeding this practice and completed less than one (1) year prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the user also has a “continuing obligation to not interfere with activity and use limitations associated with the property,” must take “reasonable steps to prevent releases” and must “comply with legal release reporting obligations.” Further, it is the goal of this study to identify business risks related to the property associated with environmental conditions. This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified. The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM E-1527-13, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. Our opinion cannot be extended to portions of the site that were unavailable for direct observation, reasonably beyond the control of WEECO. The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not included in our contract for services. Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

This report has been prepared for the sole use of **US Metro Bank**. The contents should not be relied upon by any other parties without the express written consent of **US Metro Bank and**

**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

WEECO.

1.5 LIMITING CONDITIONS

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past or current owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Information relative to deed restrictions and environmental liens, a title search, and a pre-survey questionnaire was not provided by the Report User.
- WEECO was unable to determine the property use at 5-year intervals, which constitutes a data gap. Information concerning historical use of the subject property was unavailable for various time frame intervals. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, WEECO reviewed all standard historical sources and conducted appropriate interviews.
- WEECO submitted Freedom of Information Act (FOIA) requests to the City of Burbank City Clerk and Los Angeles County Public Health Investigation Unit for information pertaining to environmental health for the subject property and/or adjacent properties, inspection records, etc. for the subject property and/or adjacent properties. As of this writing, the agency has not responded to WEECO's request. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.
- WEECO was unable to inspect the entirety of the subject property at **1130 W. Olive Avenue**. WEECO investigator was unable to go inside of the subject building due to the COVID-19 pandemic. Based on the nature of use of the subject building (medical facility, law office, and chocolate retail), this limited method of survey is not expected to alter the overall findings of this assessment.

**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

2.0 SITE DESCRIPTION

2.1 SITE LOCATION AND LEGAL DESCRIPTION

The subject site at **1130 W. Olive Avenue** is a commercial property located on the east side of Olive Avenue between Virginia Avenue and Victory Boulevard, in the City of Burbank, County of Los Angeles within the State of California. According to the Los Angeles County Assessor, the subject property is described as Assessor's Parcel Number (APN): 2446-027-040.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Appendix A: Site Photographs, and Appendix B: Envirosearch Reports for the location and site characteristics of the subject property.

2.2 CURRENT PROPERTY USE

The subject property is currently occupied by "Urgent Care Center", "Law Office", and "Delon Chocolates". The subject property consists of one (1) single-story commercial building. Onsite operations consist of a medical facility, office, and chocolate store. In addition to the current structure, the subject property was improved with an asphalt paved parking area. A storage garage was observed at the subject property.

The subject building appears to be constructed of stucco and concrete block walls, composite and shingled roof, and concrete slab floors. The building materials appeared to be in good condition at the time of visual inspection.

The subject property is designated for a commercial development by the City of Burbank.

The subject property was identified in the HAZNET regulatory database reports, as further discussed in Section 5.0.

2.3 CURRENT USE OF ADJACENT PROPERTIES

During the Site Reconnaissance, WEECO's field assessor also visually inspected and documented the use of those properties, which adjoin the subject properties. The observations made by Mr. Hansol Yoo of the adjoining properties are as follows:

NORTH

- The property to the north of the subject site is used for a residential purpose (Residential / 1100 W. Olive Avenue).

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

EAST

- The properties to the east of the subject site are used for residential purposes (Residential / 1111 W. Angeleno Avenue and 118 S. Virginia Avenue).

SOUTH

- The properties to the south of the subject site are used for commercial purposes (Commercial and “Western Sleep Center, Align Chiropractic, and Western Neurological” / 1150 and 1218 W. Olive Avenue).

WEST

- The property to the west of the subject site across Olive Avenue is used for a recreational purpose (“George Izay Park” / 1111 W. Olive Avenue).

The adjoining properties to the South and West are listed in the HAZNET regulatory database reports.

The above referenced HAZNET facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject property.

2.4 PHYSICAL SETTING SOURCES

2.4.1 USGS Topographic Map Review

The United States Geological Survey (USGS) *Burbank, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA.

USGS topographic map indicates that the subject property and the vicinity had established medium duty and light duty roads in their current configurations. The ground elevation level at the subject site is approximately 538 feet above the mean sea level.

The slope in the general topographic region of the Project appears to be to the south.

The Source of these topographic maps is from the US Department of the Interior, Geological Survey.

The topography of the site area demonstrates a complex elevation contour. The topography of the local area can be useful in recognizing the direction in which surface runoff and groundwater will generally flow. However due to the creation of sewers, drains and other man made water canals, the flow of surface runoff is not necessarily the same as would be expected by the topography. The groundwater of the local area can also differ from the general topography due to a variation of depth of the ground water, the geology of the subsurface soil in the area.

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

A copy of the most recent topographic map is included as Appendix B of this report.

2.4.2 Geology and Hydrogeology

The subject site is in the Los Angeles Forebay Area, located in the northern part of the Central Basin. In general, it is a free groundwater area; however, in the course of this investigation it became evident that the Bellflower aquiclude extends into the southerly portion of the forebay area. The aquiclude extends in this area contains a high percentage of sand, and vertical percolation of water is apparently more rapid here than in other portions of the basin covered by it. Where the Bellflower aquiclude is missing within the forebay area, the aquifers are in direct hydraulic continuity with the surface.

The Los Angeles Forebay Area is overlain by parts of the La Brea, Los Angeles and Montebello Plains. The known water-bearing sediments extend to a depth of 1600 feet (1440 feet below sea level) and include recent alluvium, the Lakewood formation and the San Pedro formation. Some fresh water also may be present in the Pliocene and Miocene rocks underlying these formations in this area.

Recent alluvium in the Los Angeles Forebay Area is found on the Los Angeles Plain and in the Los Angeles Narrows. It attains a maximum thickness of 160 feet, and includes the western arm of Gaspar aquifer and the parts of the Semi-perched aquifer and Bellflower aquiclude lying west and south of the Los Angeles River.

The Semi-perched aquifer is defined as the area where sand and gravel overlying the Bellflower aquiclude is more than 20 feet in thickness. This semi-perched aquifer is also present in the Lakewood formation just south of the Repetto Hill. Although the aquifer can be defined in well logs, water levels in well indicate that it contains little or no water.

Based upon information provided by the LACDPW Hydrologic Records Section, the nearest municipal production well is located approximately less than half a mile northwest of the site and is owned by the LADWP (LACDPW #3872H). The well is active, and had a reported depth to groundwater of 88.20 feet bgs (LACDPW, 2020).

3.0 HISTORICAL INFORMATION

WEECO obtained historical use information about the subject property from a variety of sources.

3.1 CITY DIRECTORY REPORT REVIEW

WEECO reviewed City Directory Report obtained from EnviroSite Corporation (Environmental Record Search) on **March 9, 2021** for past names and businesses that were listed for the subject property and adjacent properties.

EnviroSite Corporation's City Directory Report was reviewed which identifies the tenants (be it the owner or lessee) of the subject site over the last 50 years. Sources for the research includes various city directories, street address directories and criss-cross directories published from 1920 forward. Based on the City Directory Report, from 1936 to 1952, there were no listings. In 1969, the subject property was listed as having "West Olive Medical Building, Barnes Robt Podiatrist, Eschrich WM F Phys, Hansen Robt J Phys, Olive Medical Phys, Pappas Basil M Phys, and Saltzman A F Dentist". In 1971, the subject property was listed as having "W Olive Mdcl Bg, Barnes Robt Dr, Eschrich WM Dr&Asc, Hansen Robt J, Olive AV Mdcl Phmcy, Saltzman A F DR, and West Olive Mdcl Bdg". In 1976, the subject property was listed as having "W Olive Mdcl Bg, Barnes Robt Dr, Eschrich WM Dr&Asc, Hansen Robt J, Olive Av Mdcl Phmcy, and West Olive Mdcl Bdg". In 1981, the subject property was listed as having "W Olive Mdcl Bldg, Eschrich Wm Dr&Asc, Hansen Robert J, Lima John B MD, Olive AV Mdcl Phmcy, Primack Donald DDS, Urbach Abraham S, West Olive Med Bld, and West Olive Med Bldg". In 1986, the subject property was listed as having "W Olive Mdcl Bldg, Eschrich WM Dr&Asc, Olive AV Mdcl Phar, Primack Donald DDS, Vaisman Sofia MD, and West Olive Mdcl Bl". In 1990, the subject property was listed as having "Eschrich WM Dr&Asc, Marshall William MD, Olive Ave Med Pharm, Primack Donald DDS, and West Olive Mdcl Bl". In 1996, the subject property was listed as having "Glick David G MD, Hocutt Ina, Olive Ave Med Pharm, West Olive Mdcl Bl, and West Olive Mdcl Grp". In 2001, the subject property was listed as having "Burbank Urgent Care, Health Insurance Managed Care, Intercare Industrial, Nobel Sion MD, Olive Ave Medical Pharmacy, SJD Management, and Urgent Care and Medical Center". In 2006, the subject property was listed as having "Bestwest Physical Therapy, Burbank Urgnet Care & Med Cntr, Intercare Industrial, Olive Ave Medical Pharmacy, Regal Medical Group-Burbank, SJD Management, Urgent Care and Medical Center, and Victory Urgent Care". In 2011, the subject property was listed as having "Comfort Hospice Cr of Burbank, Olive Ave Medical Pharmacy, Rapid Care Burbank, Rapidcare Urgent Care Center, Regal Medical Group-Burbank, and SJD Management". In 2018, the subject property was listed as having "Allied Premium Finance Inc, Better Look Skincare, SJD Management, and Valley to Valley Pharmacy Inc". Copies of select City Directory Report are included in Appendix B of this report.

- **Data Gap and Data Failure**

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required, despite good faith efforts to gather such information. Data failure is one type of data gap. According to ASTM E1527-13 “data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met”. Pursuant to ASTM Standards, historical sources are required to document property use back to the property’s first developed use or back to 1940, whichever is earlier. However, pursuant to ASTM #1527-13, Section 8.3.2.1, if the

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

specific use of the property appears unchanged over a period longer than five years, then it is not required by this practice to research the use during that period.

3.2 HISTORICAL AERIAL PHOTO MAP REVIEW

WEECO obtained available aerial photographs of the subject property and surrounding area from EnviroSite Corporation on March 10, 2021 and NETR Online - Historical Aerial Photo. A historical map review was conducted to better understand the historical use of the subject site.

Map Date:	Description:
2016	Same as current aerial photo map
2014	Same as 2016 aerial photo map
2012	Same as 2014 aerial photo map
2010	Same as 2012 aerial photo map
2009	Same as 2010 aerial photo map
2005	Same as 2009 aerial photo map
2004	Same as 2005 aerial photo map
2003	Same as 2004 aerial photo map
1994	Same as 2003 aerial photo map
1989	Same as 1994 aerial photo map
1980	Same as 1989 aerial photo map
1977	Same as 1980 aerial photo map
1972	Same as 1977 aerial photo map
1964	Same as 1972 aerial photo map
1954	Vacant / Undeveloped Land
1952	Residential Buildings on the Southern Portion of Subject Property

Copies of select aerial photographs are included in Appendix B of this report.

3.3 SANBORN FIRE INSURANCE MAP

WEECO reviewed the collection of Sanborn Fire insurance maps from EnviroSite Corporation (Environmental data Resources) on March 9, 2021.

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIMs), real estate atlases and similar maps for the site location and adjoining properties. These maps were used to create a multi-page file named FIM+Maps. The maps have title blocks that include the map publisher, year the map was created and, if applicable, the year the map was last updated. The years provided are: 1953, 1954, 1955, 1960, and 1968. See Appendix B.

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

1953-1955: The fire insurance maps show that the subject property is occupied by vacant / undeveloped land and dwellings.

1960-1968: The fire insurance maps show that the subject property is occupied by a medical building and shed.

4.0 GOVERNMENT RECORD SEARCH

4.1 CITY OF BURBANK CITY CLERK

WEECO contacted the City of Burbank City Clerk to review any records regarding hazardous wastes/materials/violations and underground/ aboveground storage tanks (USTs/ASTs) for the subject site. As of the date of this report, WEECO has not yet received a response from the City of Glendale City Clerk for inclusion into this report. This is considered a data gap. If records are received after the completion of this report that affect the outcome, an addendum with a records summary will be sent to Client along with revised recommendations. See Appendix C.

4.2 LOS ANGELES COUNTY PUBLIC HEALTH INVESTIGATION UNIT

WEECO investigator contacted the Los Angeles County Public Health Investigation Unit to search for any environmental health records for the property. As of the date of this report, WEECO has not yet received a response from the Los Angeles County Public Health Investigation Unit for inclusion into this report. This is considered a data gap. If records are received after the completion of this report that affect the outcome, an addendum with a records summary will be sent to Client along with revised recommendations. See Appendix C.

4.3 SOUTH COAST AIR QUALITY CONTROL BOARD

WEECO investigator researched data from the South Coast AQMD Database to review any records regarding Hazardous Waste/Materials and violations for the subject property. No records were found for the subject site.

4.4 REGIONAL WATER QUALITY CONTROL BOARD

The subject site was not listed as a LUST (Leaking Underground Storage Tank) site on the Geotracker – California State Water Resources Control Board's sponsored website.

4.5 DEPARTMENT OF TOXIC SUBSTANCES CONTROL (ENVIROSTOR)

WEECO investigator contacted the Department of Toxic Substances Control, EnviroStor website to review any records pertaining to hazardous materials used or stored at the subject site and to review any records pertaining to aboveground/underground storage tanks at the subject site. No records were found for the subject site.

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

4.6 DEPARTMENT OF TOXIC SUBSTANCES CONTROL (HWTS)

WEECO investigator contacted the Department of Toxic Substances Control, Hazardous Waste Tracking System (HWTS) website to review the California and Non California Manifests Tonnage Total and Waste Code at the subject site. Four (4) inactive records were found for the subject property. See Appendix C.

The facility, “Adventist Health Physicians Network”, has no information regarding transporter registration. No records were found regarding California Manifest Counts and Total Tonnage and Non California Manifest Total Tonnage.

The facility, “West Olive Medical Center”, has no information regarding transporter registration. California Manifest Counts and Total Tonnage records were found for the years 1994 and 1996. No records were found regarding RCRA waste. No records were found regarding Non California Manifest Total Tonnage.

California Waste Code by Year Matrix		
Description	1994	1996
Metal Sludge	0.00	0.031
Photochemicals/Photoprocessing Waste	0.10	0.00

The facility, “Rapid Care”, has no information regarding transporter registration. No records were found regarding California Manifest Counts and Total Tonnage and Non California Manifest Total Tonnage.

The facility, “West Olive Medical Center”, has no information regarding transporter registration. No records were found regarding California Manifest Counts and Total Tonnage and Non California Manifest Total Tonnage.

4.7 OIL & GAS MAP

WEECO reviewed California Department of Conservation, Geologic Energy Management Division (CalGEM) maps for the Property and immediate vicinity via the CalGEM Online Mapping System (COMS), but found no active or abandoned oil and/or gas wells on the Property or in the immediate vicinity.

Source: <https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspx>

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

5.0 FEDERAL, STATE AND REGIONAL RECORDS SEARCH

As part of the Phase I Environmental Assessment, WEECO utilized Envirosearch Corporation of Shelton, Connecticut, as an information source for regulatory agency environmental database records. The environmental database report was dated March 5, 2021.

An attempt to locate listed Orphan Sites (facilities that could not be mapped or geocoded due to inadequate address information) within an area or radii of concern to the subject property was attempted by WEECO. These attempts consisted of a street review, a drive-by view of orphan site, and/or evaluating site type given information provided by government agencies. A copy of the radius report is included in the Appendix B.

OFF-SITE:

◆ **National Priorities List (NPL) Facilities**

The NPL, also known as the Superfund List, is an EPA listing of the nation's worst uncontrolled or abandoned hazardous waste facilities. Designation as a Superfund Site is primarily based on a score that the facility receives from the EPA's Hazard Ranking System. These facilities are targeted for possible long-term remedial action. Such prioritized sites with significant risk to human health and the environment receive remedial funding under the Comprehensive Environmental Response Conservation and Liability Act (CERCLA). The NPL is compiled by

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

EPA pursuant to CERCLA, 42 U.S.C. §9605(a)(8)(B). (<http://www.epa.gov/superfund/sites/npl/npl.htm>).

Three (3) NPL sites were identified within the specified radius from the subject property.

San Fernando Valley (Area 2) (Crystal Springs Wellfield Area) is listed (EPA ID CAD980894901) on the NPL Listing.

The San Fernando Valley (Area 2) site is a 6,680-acre area of contaminated groundwater in Glendale, California. The site is one of four Superfund sites in the San Fernando Valley. Numerous potentially responsible parties (PRPs) contaminated groundwater in the region with volatile organic compounds (VOCs), including trichloroethylene (TCE) and perchloroethylene (PCE). Cleanup and investigation activities are ongoing.

For the site's long-term cleanup, EPA split the site into two operable units (OUs) to manage and prioritize cleanup actions. An OU is a focused study area that allows EPA to take discrete actions as part of an overall cleanup. Glendale North and South OU: The interim remedy includes groundwater pumping and treatment, with the City of Glendale or another municipality receiving the treated water. The Glendale Area treatment facility began operating in 2000 and continues to provide drinking water to the city. So far, the plant has removed over 20,000 pounds of VOCs from groundwater at the site. Glendale Chromium OU: EPA completed a removal action, or short-term cleanup, in 2007 to excavate contaminated soils and cap and fence the site. EPA began investigating chromium contamination in the groundwater in 2008. EPA and PRPs have since installed 29 new groundwater monitoring wells to help identify the extent of chromium contamination. Investigation activities are ongoing. EPA will use the results of these studies to identify cleanup options for the site.

San Fernando Valley (Area 1) (North Hollywood Wellfield Area) is listed (EPA ID CAD980894893) on the NPL Listing.

The San Fernando Valley (Area 1) site is a twenty-square-mile area of contaminated groundwater located primarily in North Hollywood and Burbank, California. The site is one of four Superfund sites in the San Fernando Valley. The Area 1 site has been further divided into operable units: the Burbank Operable Unit (BOU) located primarily in Burbank and south of the Burbank airport; and, the North Hollywood Operable Unit (NHOU) located to the west of the BOU. Numerous potentially responsible parties (PRPs) contaminated groundwater in the region with volatile organic compounds (VOCs), including trichloroethylene (TCE) and perchloroethylene (PCE). Cleanup, operation and maintenance activities, and monitoring are ongoing.

EPA separated the site into two areas to help manage and prioritize cleanup activities. North Hollywood Area: The interim remedy included groundwater pumping and treatment using aeration and granular activated carbon air filtering units, with discharge of the treated water to the Los Angeles Department of Water and Power's pumping station. Construction of the remedy began in 1989 and operation is ongoing. As of 2008, the system had extracted and treated about

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

eight billion gallons of VOC-contaminated groundwater. EPA later selected a second interim remedy to include well-head treatment for hexavalent chromium and 1,4-dioxane, expanded combined treatment operations and additional monitoring wells. EPA is currently proposing to update the remedy by allowing reinjection of treated groundwater into source areas. Burbank Area: The interim remedy included extraction and treatment of groundwater. The City of Burbank's Public Service Department receives groundwater from the site blended with treated groundwater to reduce nitrate levels and distributes it to the public water supply system. Operation of the remedy began in 1996. Groundwater treatment has removed about 36 billion gallons of VOCs-contaminated groundwater and is ongoing.

The above referenced NPL facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject property.

Based on the relative distance from the subject property (greater than ¼ mile radius), down-gradient to cross-gradient hydraulic position, soil-only media impacted, and/or current case-closed/NFA status, the other listed sites are not anticipated to represent a significant environmental concern to the subject property.

◆ **Federal Delisted NPL List**

Federal Delisted NPL List consists of sites that no longer require further response actions as determined by the EPA.

No Federal Delisted NPL List sites were identified within the specified radius from the subject property.

◆ **SEMS (Superfund Enterprise Management System) List**

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Two (2) SEMS ACTIVE List sites were identified within the specified radius from the subject property.

San Fernando Valley (Area 1) (North Hollywood Wellfield Area) (Site ID0902251) is listed on

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

the SEMS Active Listings. The site is currently on the Final NPL.

San Fernando Valley (Area 2) (Crystal Springs Wellfield Area) (Site ID 0902252) is listed on the SEMS Active Listings. The site is currently on the Final NPL.

The above referenced SEMS Active facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject property.

◆ **SEMS-ARCHIVE List**

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

No SEMS-ARCHIVE List sites were identified within the specified radius from the subject property.

◆ **RCRA CORRACTS List**

RCRA CORRACTS List is an EPA-maintained database of Resource Conservation and Recovery Act (RCRA) facilities undergoing "corrective action". A "corrective action order" is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred, even if it predates RCRA.

One (1) RCRA CORRACTS List site was identified within the specified radius from the subject property.

Based on the relative distance from the subject property (greater than ¼ mile radius), down-gradient to cross-gradient hydraulic position, soil-only media impacted, and/or current case-closed/NFA status, the listed site is not anticipated to represent a significant environmental concern to the subject property.

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

◆ **RCRA TSDF List**

RCRA TSDF List are sites that generate, transport, store, treat, and/or dispose of hazardous waste and are required to register their hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The list includes small- and large quantity operators and handler violations.

No RCRA TSDF List sites were identified within the specified radius from the subject property.

◆ **RCRA Generators List (Small Quantity and Large Quantity)**

RCRA hazardous waste generators are identified as Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). RCRA LQGs are identified as those facilities, which generate at least 1,000 kilograms (2,200 pounds) of non-acutely hazardous waste (or 1 kilogram of acutely hazardous waste) in any calendar month. RCRA SQGs are identified as those facilities that generate less than 1,000 kilograms of non-acutely hazardous waste in any calendar month.

The adjoining properties were not identified on the RCRA Generator databases.

◆ **US Engineering Controls**

This is a listing of sites with engineering controls in place to control on-site contamination. Engineering controls may include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

No US Engineering Control sites were identified within the specified radius from the subject property.

◆ **US Institutional Controls**

This is a listing of sites with institutional controls in place to control on-site contamination. Institutional controls may include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

No US Institutional Control sites were identified within the specified radius from the subject property.

◆ **Emergency Response Notification System (ERNS)**

ERNS is a national database used to collect information on reported releases of petroleum

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

products or hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, the U.S. Coast Guard, the National Response Center and the U.S. Department of Transportation. The program is a cooperative effort of the EPA, the Department of Transportation Research and Special Program Administration's National Transportation System Center, and the National Response Center. There are five primary Federal statutes that require release reporting: CERCLA Section 103; the Superfund Amendments and Reauthorization Act (SARA) Title III Section 304; the Clean Water Act of 1972 (CWA) Section 311(b) (3); and the Hazardous Material Transportation Act of 1974 (HMTA) Section 1808 (b).

The subject property was not identified on the ERNS database.

◆ **State/Tribal NPL (Response)**

Response sites identify confirmed release sites where the California Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Two (2) State / Tribal NPL sites were identified within the specified radius from the subject property.

San Fernando Valley (Area 2) (Crystal Springs Wellfield Area) (Site Code 300127) is listed as an active Federal Superfund site. The past uses are aerospace manufacturing/maintenance, industry machinery manufacturing, metal finishing, metal plating, and aerospace research. The confirmed contaminants of concern are PCE, TCA, TCE, Chromium III, and Chromium VI. The aquifer used for drinking water supply and soil are affected.

San Fernando Valley (Area 1) (North Hollywood Wellfield Area) (Site Code 300173) is listed as an active Federal Superfund site. The past uses are aerospace manufacturing/maintenance, machine shop, metal manufacturing, metal finishing, metal plating, and aerospace research. The confirmed contaminants of concern are PCE, TCA, TCE, Chromium III, and Chromium VI. The aquifer used for drinking water supply and soil are affected.

The above referenced State/Tribal NPL (Response) facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

◆ **State/Tribal CERCLIS (Envirostor and Historical Cal-Sites)**

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) Envirostor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response (RESPONSE), including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. Envirostor

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

provides similar information to the information that was available in Cal-Sites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Sixteen (16) State / Tribal Envirostor sites were identified within the specified radius from the subject property.

San Fernando Valley (Area 2) (Crystal Springs Wellfield Area) (Site Code 300127) is listed as an active Federal Superfund site. The past uses are aerospace manufacturing/maintenance, industry machinery manufacturing, metal finishing, metal plating, and aerospace research. The confirmed contaminants of concern are PCE, TCA, TCE, Chromium III, and Chromium VI. The aquifer used for drinking water supply and soil are affected.

San Fernando Valley (Area 1) (North Hollywood Wellfield Area) (Site Code 300173) is listed as an active Federal Superfund site. The past uses are aerospace manufacturing/maintenance, machine shop, metal manufacturing, metal finishing, metal plating, and aerospace research. The confirmed contaminants of concern are PCE, TCA, TCE, Chromium III, and Chromium VI. The aquifer used for drinking water supply and soil are affected.

The above referenced State/Tribal CERCLIS (Envirostor) facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Based on the relative distance from the subject property (greater than ¼ mile radius), down-gradient to cross-gradient hydraulic position, soil-only media impacted, and/or current case-closed/NFA status, the other listed sites are not anticipated to represent a significant environmental concern to the subject property.

◆ **State/Tribal SWF/LF**

State/Tribal Solid Waste Landfills (SWLF) typically contains an inventory of solid waste disposal facilities or landfills in a particular State. Depending on the State, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

No State/Tribal SWF/LF sites were identified within the specified radius from the subject property.

◆ **State/Tribal LUST**

Leaking Underground Storage Tanks (LUST) sites are a database of sites with confirmed or

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

unconfirmed leaking underground storage tanks.

Seven (7) LUST sites were identified within the specified radius from the subject property.

Burbank Fire Station 15 | City of Burbank Fire #15 | Fire #15 (1420 W. Verdugo Avenue) is a site located approximately 912-feet to the southwest of the subject property at an inferred down-gradient hydrological position. The site is listed (Global ID T0603702537) as a LUST case for soil contamination by diesel in December 1997. The site received regulatory closure in November 2011. Thus, this site does not represent a significant environmental concern to the subject property.

Avibank Mfg Inc | Avibank Mfg.Inc SPS Fasteners PCC Comp. | Autry Resource Center (210 S. Victory Boulevard) is a site located approximately 1,015-feet to the east-northeast of the subject property at an inferred up-gradient hydrological position. The site is listed (Global ID T0603704961) as a LUST case for contamination by solvents in October 1992. The site received regulatory closure in May 2009. Thus, this site does not represent a significant environmental concern to the subject property.

The above referenced State/Tribal LUST facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

Based on the relative distance from the subject property (greater than ¼ mile radius), down-gradient to cross-gradient hydraulic position, soil-only media impacted, and/or current case-closed/NFA status, the other listed sites are not anticipated to represent a significant environmental concern to the subject property.

◆ **State/Tribal UST (also AST, HIST UST, and CA FID UST list)**

State/Tribal Underground Storage Tanks (UST): This is a list of state registered underground storage tanks for the site area. Sites appearing on the UST list have not necessarily released hazardous substances into the environment nor do they necessarily pose environmental threat to surrounding properties. Since Federal and State UST regulations require periodic monitoring for UST leakage and immediate reporting of evidence of UST leakage, only those sites appearing on the Leaking Underground Storage Tanks (LUST) list are considered to have significant potential of environmental impact for the purposes of this Phase I.

HIST UST: Historical Underground Storage Tank Registered Database: This is a listing of underground storage tanks that have been registered but have been removed or are no longer in service. Data on the HIST UST list was supplied by the State Water Resources Control Board.

CA Facility Inventory Database (CA FID): This is a list of active and inactive underground storage tank sites. The database is maintained by the California Water Resources Control Board.

**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

The adjoining properties were not identified on any of the UST databases.

◆ **State/Tribal VCP**

The State Voluntary Cleanup Program list addresses the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

No State / Tribal VCP sites were identified within the specified radius from the subject property.

◆ **Local Ascertainable Records in Database**

The adjoining property to the South is listed in the HAZNET regulatory database report.

The adjoining property to the West is listed in the HAZNET regulatory database report.

The above referenced HAZNET facilities were evaluated based on the following criteria: violator status, area geology, gradient relationship and separation distance. Based on this evaluation, and due to their regulated nature, it is believed that this does not represent an environmental concern to the subject site.

5.5 VAPOR ENCROACHMENT SCREENING

ASTM E 2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (VES) was used as guidance for conducting a VES for the Subject Property. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern (COC) that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the Subject Property. This standard replaces E 2600-08 published in March of 2008.

The newly revised standard focuses solely on screening for the likelihood of migrating vapors volatilized from a contaminated source the encroach upon the subsurface of a property involved in a real estate transaction and create a vapor encroachment condition (VEC). Two tiers for screening are included in the practice. The first tier is based upon the existence of known or suspect contaminated sites in the area. The second tier is more comprehensive and investigates specific characteristics associated with the contaminated plumes from these sites, or if no plume information is available, relies on sampling. If the likelihood exists for vapors to reach the subsurface of the property, further investigation that is beyond the scope of this practice would be necessary to determine if vapor intrusion is occurring into any buildings on the property. Of particular note in the standard is the completely revised Legal Appendix that discusses the

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

relationship between this standard and the E 1527-13 Phase I ESA standard. In simple terms, the E 1527-13 standard (which complies with AAI) includes in its REC definition the Environmental Professional's (EP's) need to consider hazardous substances and petroleum products on the target property or migrating to the target provides a methodology for the EP to accomplish this for vapors. If vapors can reach the target property (thereby creating a VEP), the EP conducting the E 1527-13 Phase I would then have to decide whether or not the VEC constitutes an REC. This would be analogous to the EP finding in the Phase I investigation the potential for a contaminated groundwater plume to reach the target property. The EP would then have to determine if this situation is a REC.

The purpose of this practice is to define good commercial and customary practice in the United States of America for determining if a vapor encroachment condition (VEC) on a property parcel involved in a real estate transaction with respect to chemicals of concern (COC) that may migrate as vapors into existing or planned structures on a property due to contaminated soil and groundwater on the property or within close proximity to the property. For the purpose of this Report, this practice is used as a voluntary supplement to Practice E 1527 and does not alter or in any way define the scope of that practice. In addition, performance of this standard is not a requirement of and does not constitute, expand, or in any way define "all appropriate inquiry" as defined or approved by U.S. EPA under CERCLA and the regulations thereunder, including 40 CFR Sec. 312.11.

In defining a standard of good commercial and customary practice for determining a VEC on a parcel of property, the goal of the process established by this practice is to identify whether or not a VEC exists or is likely to exist on the property. The term VEC means the presence or likely presence of any COC in the indoor air environment of existing or planned structures on a property caused by the release of vapor from contaminated soil or groundwater either on the property or within close proximity to the property, at a concentration that presents or may present an unacceptable health risk to occupants. The term is not intended to include de minimis conditions that do not normally represent an unacceptable health risk to occupants that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be de minimis does not represent a VEC.

The screening involves a two tiered approach to assessing VEC risk as described below.

VES TIER I - SEARCH DISTANCE TEST/CHEMICALS OF CONCERN TEST

The search distance test involves a review of the regulatory database report (see Section 5) and available historical records to make a determination if any *known or suspect potentially contaminated* properties exist within the Area of Concern (AOC). High risk sites are typically current and former gas stations, former and current dry cleaners, manufactured gas plants, and industrial sites. The AOC is defined as any up gradient sites within the ASTM Practice E1527-13 standard search distances and any cross or down gradient sites within 1/3 mile for solvents and petroleum products.

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

If the contamination at the known or potentially contaminated site within the AOC consists of COCs, then a potential Vapor Encroachment Condition (pVEC) exists and Tier II screening is recommended. If no known or potentially contaminated sites with COCs exist within the AOC, no further inquiry is necessary.

No release sites were identified in the Envirosearch Radius Map Report (see Section 5) within the AOC that are considered to pose a pVEC at the Subject Property based on the Tier I evaluation.

VES TIER II - PLUME TEST

The Plume Test assesses whether or not a plume is close enough to the property to result in a VEC.

1. Critical Distance Determination - Determine distance from property to edge of plume in any direction (vertical, horizontal, lateral).
2. A VEC exists if there is a plume of VOCs, semi-volatile organic compounds (SVOCs), Volatile Inorganic Compounds (VICs), or free petroleum product have accumulated above a water table within 100 feet of the Subject Property or if a plume of dissolved volatile petroleum hydrocarbons is present within 30 feet of the property.

The sites were manually mapped to determine the location of the Subject Property and any potential plumes of contamination relative to the Subject Property and groundwater gradient. In addition, the case information for each site was reviewed.

Based on WEECO's review of the historical and current usage of the Subject Property as well as our review of the Federal, State, and Regional databases discussed in Section 5.5 for onsite and adjacent properties of potential concern for vapor encroachment, no pVEC (potential Vapor Encroachment Condition) was identified in connection with the Property, and it is WEECO's professional opinion that a VEC is not suspected of having encroached into the Subject Property.

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

6.0 USER PROVIDED INFORMATION AND INTERVIEWS

6.1 USER PROVIDED INFORMATION

The purpose of this section is to describe tasks to be performed by the *User*. The “All Appropriate Inquiries” Final Rule (40 CFR Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for an *landowner liability protections (LLP)* to CERCLA liability. While such information is not required to be provided to the *environmental professional*, the *environmental professional* shall request that the *User* provide the results of these tasks as such information can assist the *environmental professional* in identifying Recognized Environmental Conditions.

In order to qualify for one of the *Landowner Liability Protections (LLPs)*¹⁸⁷ offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “*Brownfields Amendments*”), the *user* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that “*all appropriate inquiries*” is not complete.

User Questionnaire	
Questions	User to Answer
(1) Environmental liens that are filed or recorded against the property (40 CFR 312.25). Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local?	An environmental cleanup lien/AUL search is not required from WEECO as part of this Phase I ESA.
(2) Activity and use limitations (AULs) that are in place on the site or that have been filed or recorded in registry (40 CFR 312.26). Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?	An environmental cleanup lien/AUL search is not required from WEECO as part of this Phase I ESA.

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). As the User of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	The User has not informed WEECO of any specialized knowledge or experience related to the Property or nearby properties.
(4) Relationship of the purchase price to the fair market value of the Property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	The User has not informed WEECO of any information pertaining to the purchase price with respect to the fair market value of the Property.
(5) Commonly known or reasonably ascertainable information about the Property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the Property that would help the Environmental Professional (EP) to identify conditions indicative of releases or threatened releases? For example, as User, (a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	The User has not informed WEECO of any commonly known or reasonably ascertainable information about the Property that would identify conditions indicative of releases or threatened releases.
(6) The degree of obviousness of the presence of likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). As the User of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the Property?	The User has not informed WEECO of any obvious indicators that point to the presence or likely presence of contamination at the Property.

**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

6.2 INTERVIEWS

6.2.1 Interview with Owner (or Property Manager)

The owner of the subject property was not available to be interviewed at the time of the assessment.

6.2.2 Interview with Current Property Occupant

The occupant of the subject property was not available to be interviewed at the time of the assessment.

6.2.3 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

6.3 PREVIOUS REPORTS OR OTHER PROVIDED DOCUMENTATION

No previous reports or other pertinent documentation was provided to WEECO for review during the course of this assessment.

7.0 SITE RECONNAISSANCE

A site reconnaissance of the subject property was conducted on March 16, 2021. Investigator(s) in attendance for the site reconnaissance included the following:

- ◆ Hansol Yoo, Project Engineer / WEECO

The site reconnaissance consisted of a visual inspection of the subject property. The following sections discuss the findings of the site reconnaissance.

7.1 GENERAL SITE CHARACTERISTICS

7.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial trash-bins. Independent solid waste disposal contractor, NASA Services, removes solid waste from the subject property. Two (2) trash-bin was observed at the subject site, and did not appear to contain any hazardous materials or waste.

7.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Burbank services the subject property vicinity. No wastewater treatment facilities or septic systems are observed or reported on the subject property.

7.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located in the public right of way. Site storm water from roofs, landscaped areas, and paved areas is directed to storm water drains in the public right of way. The subject property is connected to a municipal owned and maintained sewer system. The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

7.1.4 Sources of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity provided by the Southern California Edison.

**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

7.1.5 Wells

No aboveground evidence of wells was observed during the site reconnaissance.

7.1.6 Septic Systems

No septic systems were observed or reported on the subject property.

7.1.7 Additional Site Observation

No additional general site characteristics were observed during the site reconnaissance.

7.2 POTENTIAL ENVIRONMENTAL HAZARDS

7.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances and petroleum products were used or stored at the Site.

7.2.2 Underground & Aboveground Hazardous Substances and Petroleum Product Storage Tanks (USTs/ASTs)

No evidence of current or former ASTs or USTs were observed during the site reconnaissance.

7.2.3 Evidence of Release

Minor spills, stains or other indications that a surficial release has occurred at the subject property were observed at the subject site. However, those stains could not impose a significant threat upon the environmental integrity of the subject site.

7.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – “*Non-PCB*”; 2) 50 ppm-500 ppm – “*PCB-Contaminated*”; and, 3) Greater than 500 ppm – “*PCB-Containing*.” The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs.

No PCB-containing equipment (interior/exterior transformers, oil-filled switches, hoists, lifts,

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

dock levelers, balers, etc.) were observed on the subject property during WEECO's reconnaissance.

7.2.5 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

7.2.6 Pit, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

7.2.7 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

7.3 NON-ASTM SERVICE

7.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is a group of naturally occurring minerals used in many products, including building materials vehicle brakes, insulation and other products that require resistance to heat and corrosion. Asbestos includes: chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.

The inhalation of asbestos fibers by workers can cause cancer and other serious diseases of the lungs and other organs that may not appear until years after the exposure has occurred. For instance, asbestosis can cause a buildup of scar-like tissue in the lungs and result in loss of lung function. Asbestos fibers associated with these health risks are too small to be seen with the naked eye, and smokers are at higher risk of developing some asbestos-related diseases.

Asbestos-containing materials (ACM) do not always pose a hazard to occupants and workers in buildings that contain these materials. Intact, undisturbed ACMs generally do not pose a health risk. ACMs may become hazardous and pose an inhalation risk when they are damaged, disturbed in some manner, or deteriorate over time and asbestos fibers are released into building air.

ACM can be found in a multitude of building products which include decorative and acoustical plaster texture, fire-proofing (Monokote), joint compound, attic and wall insulation, resilient floor covering, mastic, recessed lighting fixtures, wiring, elevator brakes, fire doors, pipe insulation, pipe gaskets, duct insulation, duct tape, siding and roofing materials (tar/shingles), textured paint, stucco, concrete, asphalt underlayment (Petromat) and plaster. Local jurisdictions have specific

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

laws and regulations regarding asbestos and actions including building renovations and building demolition.

Based on the age of the on-site structure (1957), there is a potential for asbestos containing building materials (ACM) at the site, however, no testing was completed as part of this report. Suspect ACM observed during the site reconnaissance includes drywall and vinyl flooring, which appeared to be in good condition. However, prior to renovation or demolition work which would disturb any potential asbestos containing materials, they should be sampled by a California Certified Asbestos Consultant, who may also assist with proper removal of any materials found to contain asbestos. Such materials must be removed by a properly licensed asbestos abatement contractor. Oversight and monitoring of the work must be performed by a California Certified Asbestos consultant.

7.3.2 Lead-Based Paint (LBP)

Although the use of lead-based paint in residential structures has been prohibited since 1978, it may still be used in commercial and industrial buildings. It is approximated that 80 percent of buildings built prior to 1978 contain lead paint. Even at low levels, lead poisoning can cause IQ deficiencies, reading and learning disabilities, impaired hearing, reduced attention spans, hyperactivity and other behavior problems with children under 6 years old being most at risk.

Lead is a highly toxic metal that was used for many years in products found in and around our homes and commercial buildings. Lead can be found in dust from friction surfaces of windows and doors that are painted with lead-based paint and from building components coated with lead-based paint that has begun peeling, flaking and chalking. There is also the potential for soil to have elevated lead levels due to leaching from lead based paint on nearby structures and deposition of airborne lead when leaded fuel was in use prior to the 1976 ban and phase out.

Since the 1980's, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or has been limited in use in consumer products.

Between the local, State and Federal agencies, including the Environmental Protection Agency (EPA), Department of Housing and Urban Development (HUD), Occupational Safety & Health Administration (OSHA) and the California Department of Public Health (CDPH), each state has various action limits that have been enacted with the intent to prevent human exposure and contamination of the surrounding environment.

Based on the age of the on-site structure (1957), there is a potential for lead based paint at the site, however, no testing was completed as part of this report. Painted surfaces observed appeared to be in good to moderate condition, with no chipping or peeling observed. However, prior to renovation or demolition work which would disturb any potential lead paint, they should be sampled by a California Certified lead paint consultant, who may also assist with proper removal of any materials found to contain lead paint. Such materials must be removed by a properly

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

licensed lead paint abatement contractor. Oversight and monitoring of the work must be performed by a California Certified Lead consultant.

7.3.3 Radon

Radon sampling and testing was not requested by the User/Client as part of this Phase I ESA.

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

A review of the EPA's Map of Radon Zones indicates that Los Angeles County falls within Zone 2, a zone of moderate radon potential. Counties located within Zone 2 have a predicted average indoor radon screening level ranging from 2 to 4 picocuries per liter (pCi/L). A radon survey was not included in the current scope of services.

Source: <http://www2.epa.gov/radon/find-information-about-local-radonzones-and-radon-programs#radonmap>

It should be noted that site-specific radon levels vary greatly within the EPA radon zones and on-site radon measurements would need to be collected in order to determine the Property radon levels.

7.3.4 Lead in Drinking Water

Since a lead in drinking water survey is not included in the current scope of services for Phase I Environmental Site Assessment, WEECO did not test drinking water at the Property for lead content.

The major source of LIW is leaching of lead from household plumbing materials or water service lines used to bring water from the main to the building. Lead can leach into drinking water through contact with the plumbing, solder, fixtures and faucets (brass), and fittings. The amount of lead in drinking water will be influenced by the type and amount of minerals in the water, how long the water stays in the pipes, the amount of wear in the pipes, the water's acidity and its temperature.

7.3.5 Wetland

According to the Clean Water Act, a wetland is "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Wetland areas have been identified as ecologically diverse and sensitive areas and are generally subject to more stringent development, re-development, and building regulations.

The U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory was reviewed to

Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506

determine if the subject property is situated within an identified wetland. According to the USFWS, the subject property is not located within a wetland area.

7.3.6 Mold

Mold and mildew are simple, microscopic organisms in the Fungi kingdom that can grow virtually anywhere if they have adequate moisture, nutrients, air and appropriate temperatures. Depending on the particular mold or fungus, growing colonies can be almost any color. Most household molds and fungi (mildews) are white, black, grey, or brown colored. Spores of dozens of kinds of mold and fungus (mildew) are present at all times in indoor and outdoor air. These spores can settle, germinate and grow wherever good growth conditions are found. They can grow on soil, plants, dead plant materials, foods, fabrics, paper, wood and many other materials found within buildings. Many molds are not harmful and actually have a beneficial role in the environment and in living systems. In soil, molds play a crucial part in decomposition of organic matter and in making nutrients available to plants.

When mold and fungi (mildews) growth occurs in buildings, it can be very destructive to the materials on which they grow and cause high levels of airborne mold spores and volatile organic compounds associated with the characteristic musty / moldy odor. They cause staining, decomposition (rotting of materials) and objectionable, musty odors. Where colonies are extensive they can also produce enough spores, and by-products to be harmful to health. Many of the by-products of mold and fungus (mildew) are irritating to skin, eyes and respiratory tracts. Some molds produce true allergic sensitization and allergic reactions in susceptible people. Some molds produce toxic by-products that could be harmful to skin, and poisonous if ingested or inhaled in quantity. Persons with compromised immune systems may even experience systemic fungal infections of the respiratory tract.

WEECO observed a limited amount of interior areas of the subject building in order to identify the significant, visible presence of mold. This activity was not intended to discover all areas which may be affected by mold growth at the subject property. Potential areas of mold not observed as part of this limited assessment, include but are not limited to, pipe chases, HVAC systems and within enclosed wall and ceiling cavities that may be present in the subject property. A complete mold assessment, which may include various types of sampling, would be required to determine if mold levels within the subject building are at levels acceptable by industry standards.

WEECO did not observe visible or olfactory indications of the presence of mold, nor did WEECO observe obvious indications of significant water damage. No sampling was conducted as part of this assessment.

8.0 FINDINGS AND CONCLUSIONS

FINDINGS

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by WEECO, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any environmental issues during the course of this assessment.

**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

WEECO has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of **1130 W. Olive Avenue, in the City of Burbank, Los Angeles County, California** (the “subject property”). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions or environmental issues in connection with the subject property. Based on the conclusions of this assessment, WEECO recommends no further investigation of the subject property at this time.

**Phase I Environmental Site Assessment
1130 West Olive Avenue, Burbank, California 91506**

9.0 REFERENCES

During the preparation of this Report, a number of sources were contacted, individuals were interviewed, and various federal, state, county or local municipal agencies were consulted. Documentation applicable to the Property in those departments and agencies was requested and reviewed when and where reasonably ascertainable, as detailed in ASTM Standard Practice E1527-13. Individuals listed without phone numbers were contacted in person or by e-mail. Reference sources for site-specific information, hydrogeologic setting, technical data, historical research data, environmental reports and other records used are identified throughout this Report in corresponding sections. Any additional reference sources not cited in each applicable section of this report, if applicable, are disclosed in this section.

Source Description
 Source Description :

DTSC EnviroStor is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. The Superfund Enterprise Management System (SEMS) integrates multiple legacy systems into a comprehensive tracking and reporting tool, providing data on the inventory of active and archived hazardous waste sites evaluated by the Superfund program. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

Site Status :

For the site's long-term cleanup, EPA split the site into two operable units (OUs) to manage and prioritize cleanup actions. An OU is a focused study area that allows EPA to take discrete actions as part of an overall cleanup. Glendale North and South OU: The interim remedy includes groundwater pumping and treatment, with the City of Glendale or another municipality receiving the treated water. The Glendale Area treatment facility began operating in 2000 and continues to provide drinking water to the city. So far, the plant has removed over 20,000 pounds of VOCs from groundwater at the site. Glendale Chromium OU: EPA completed a removal action, or short-term cleanup, in 2007 to excavate contaminated soils and cap and fence the site. EPA began investigating chromium contamination in the groundwater in 2008. EPA and PRPs have since installed 29 new groundwater monitoring wells to help identify the extent of chromium contamination. Investigation activities are ongoing. EPA will use the results of these studies to identify cleanup options for the site.

Site Background :

The San Fernando Valley (Area 2) site is a 6,680-acre area of contaminated groundwater in Glendale, California. The site is one of four Superfund sites in the San Fernando Valley. Numerous potentially responsible parties (PRPs) contaminated groundwater in the region with volatile organic compounds (VOCs), including trichloroethylene (TCE) and perchloroethylene (PCE). Cleanup and investigation activities are ongoing.

BOND EXPENDITURE PLAN - CA

Facility Name :	SAN FERNANDO VALLEY (AREA 1)
Facility Address :	NORTH HOLLYWOOD WELLFIELD AREA, LOS ANGELES, CA 91601
County :	LOS ANGELES
Cleanup Date :	1996-05-15
Cleanup Status :	Active
Site Type :	Federal Superfund
Site Type Detailed :	State Response or NPL
Acreage :	5254
APN :	NONE SPECIFIED
National Priorities List :	YES
Regulatory Agencies Involved :	DTSC - Site Cleanup Program; RWQCB 4 - Los Angeles; US EPA
Lead Agency :	US EPA
Project Manager :	Laura Radke
Supervisor :	Juli Propes
Office :	Cleanup Chatsworth
Envirostor ID :	19990011
Site Code :	300173
Assembly :	39
Senate :	18
Congressional District :	29
Special Program :	N/R
Past Uses :	AEROSPACE MANUFACTURING/MAINTENANCE, MACHINE SHOP, MANUFACTURING - METAL, METAL FINISHING, METAL PLATING - CHROME, METAL PLATING - OTHER, RESEARCH - AEROSPACE
Potential COC :	Tetrachloroethylene (PCE); Chromium III; 1,1,1-Trichloroethane (TCA); Chromium VI; Trichloroethylene (TCE)
Confirmed COC :	Tetrachloroethylene (PCE); Chromium III; 1,1,1-Trichloroethane (TCA); Chromium VI; Trichloroethylene (TCE)
Potential Media Affected :	Soil; Aquifer used for drinking water supply affected
Restricted Use :	NO
Site Management Req :	N/R
Funding :	Responsible Party
Latitude :	34.1875
Longitude :	-118.38388889

Site Details

Cleanup Date : 1996-05-15
 Cleanup Status : Active
 Site Type : Federal Superfund
 Site Type Detailed : State Response or NPL
 Acreage : 5254
 APN : NONE SPECIFIED
 National Priorities List : YES
 Regulatory Agencies Involved : DTSC - Site Cleanup Program; RWQCB 4 - Los Angeles; US EPA
 Lead Agency : US EPA
 Project Manager : Laura Radke
 Supervisor : Juli Propes
 Office : Cleanup Chatsworth
 Envirostor ID : 19990011
 Site Code : 300173
 Assembly : 39
 Senate : 18
 Congressional District : 29
 Special Program : N/R

Past Uses : AEROSPACE MANUFACTURING/MAINTENANCE, MACHINE SHOP,
 MANUFACTURING - METAL, METAL FINISHING, METAL PLATING -
 CHROME, METAL PLATING - OTHER, RESEARCH - AEROSPACE

Potential COC : Chromium VI; Tetrachloroethylene (PCE); Chromium III;
 Trichloroethylene (TCE); 1,1,1-Trichloroethane (TCA)

Confirmed COC : Chromium VI; Tetrachloroethylene (PCE); Chromium III;
 Trichloroethylene (TCE); 1,1,1-Trichloroethane (TCA)

Potential Media Affected : Aquifer used for drinking water supply affected; Soil
 Restricted Use : NO
 Site Management Req : N/R
 Funding : Responsible Party
 Latitude : 34.1875
 Longitude : -118.383889

Completed Date :	2009-01-08
Area Name :	PROJECT WIDE
Sub Area Name :	N/R
Document Type :	Feasibility Study Report
Comments :	DTSCs letter with comments on Focussed Feasibility Study document for North Hollywood Operable Unit, San Fernando Valley Area 1 was sent out.
Completed Date :	2008-07-08
Area Name :	PROJECT WIDE
Sub Area Name :	N/R
Document Type :	Monitoring Report
Comments :	N/R
Completed Date :	1998-08-17
Area Name :	PROJECT WIDE
Sub Area Name :	N/R
Document Type :	5 Year Review Reports
Comments :	A second 5-year review of remedial activities is conducted at the North Hollywood OU (NHOU) and covers operations from 1993 thru 1997. The purpose was to evaluate whether the NH Interim Remedy achieved the objectives specified in the ROD. The findings of the 5-year review are that the objectives of the ROD have been met.
Completed Date :	1997-11-17

Source Description

Source Description : ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring. The Superfund Enterprise Management System (SEMS) integrates multiple legacy systems into a comprehensive tracking and reporting tool, providing data on the inventory of active and archived hazardous waste sites evaluated by the Superfund program. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

Source Description :

DTSC EnviroStor is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

NPL (cont.)

Site Status :

EPA separated the site into two areas to help manage and prioritize cleanup activities. North Hollywood Area: The interim remedy included groundwater pumping and treatment using aeration and granular activated carbon air filtering units, with discharge of the treated water to the Los Angeles Department of Water and Power's pumping station. Construction of the remedy began in 1989 and operation is ongoing. As of 2008, the system had extracted and treated about eight billion gallons of VOC-contaminated groundwater. EPA later selected a second interim remedy to include well-head treatment for hexavalent chromium and 1,4-dioxane, expanded combined treatment operations and additional monitoring wells. EPA is currently proposing to update the remedy by allowing reinjection of treated groundwater into source areas. Burbank Area: The interim remedy included extraction and treatment of groundwater. The City of Burbank's Public Service Department receives groundwater from the site blended with treated groundwater to reduce nitrate levels and distributes it to the public water supply system. Operation of the remedy began in 1996. Groundwater treatment has removed about 36 billion gallons of VOCs-contaminated groundwater and is ongoing.

Site Background :

The San Fernando Valley (Area 1) site is a twenty-square-mile area of contaminated groundwater located primarily in North Hollywood and Burbank, California. The site is one of four Superfund sites in the San Fernando Valley. The Area 1 site has been further divided into operable units: the Burbank Operable Unit (BOU) located primarily in Burbank and south of the Burbank airport; and, the North Hollywood Operable Unit (NHOU) located to the west of the BOU. Numerous potentially responsible parties (PRPs) contaminated groundwater in the region with volatile organic compounds (VOCs), including trichloroethylene (TCE) and perchloroethylene (PCE). Cleanup, operation and maintenance activities, and monitoring are ongoing.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description : All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

Source Description : HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Source Description : RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Hazardous Waste Summary Waste Code / Name :

D002 - CORROSIVE WASTE
 D003 - REACTIVE WASTE
 D006 - CADMIUM
 D007 - CHROMIUM
 F006 - WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING
 OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC
 ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3)
 ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM
 OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5)
 CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM
 PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING
 OF ALUMINUM.
 F009 - SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM
 ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE
 PROCESS.

Site History :

The surrounding properties are mixed commercial/industrial and residential. Avibank Manufacturing, Inc. (Avibank) formerly occupied the Site between 1957 until approximately 1986. Avibank conducted metal finishing operations which involved the use of various chemicals including chromium containing compounds and chlorinated solvents.

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Citation :	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Description :	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Notes :	Returned to compliance on 05/31/2018. OBSERVATION: 2x200 gal poly tanks containing used antifreeze located in the sub-surface containment was observed without a hazardous waste label. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled.
Division : Program : Source :	Los Angeles County Fire Department HW CERS
Violation Date :	09/18/2017
Citation :	22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Description :	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Notes :	Returned to compliance on 05/31/2018. OBSERVATION: 2x200 gal poly tanks used antifreeze and 1x800 gal, 1x600 gal AST used oil located in the sub-surface containment was observed open. The vent line penetration is used for oil discharge in Tank #10. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly closed.

Description :

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.

Notes :

Returned to compliance on 05/31/2018. OBSERVATION: A written hazardous waste tank assessment has not been obtained for the Used oil and used antifreeze tank system prior to placing system into service. Tanks #4 and 5 used oil tanks and two used antifreeze poly tanks without tank assessment documents. CORRECTIVE ACTION: Obtain a written hazardous waste tank system assessment for the Used oil tank system in accordance with 22 CCR 15 66265.192 and submit a copy to the CUPA.

Violation Date : 09/18/2017

Citation : HSC 6.5 25244.21 - California Health and Safety Code, Chapter 6.5,
Section(s) 25244.21

Description : Failure to adequately complete, and maintain for review, all
requirements of the source reduction evaluation review and plan (SB-
14).

Notes :

Returned to compliance on 05/31/2018. OBSERVATION: A source reduction evaluation review and plan with all the required information has not been completed and maintained for review. Non-RCRA Large Quantity Generator generating over 26,400 lb of used oil and used antifreeze per year. CORRECTIVE ACTION: Complete a source reduction report with all the required information and submit a copy to the CUPA. Provide a SB 14 Waste Minimization Certification & Source Reduction Evaluation Plan for inspection. May provide 1. Source Reduction Evaluation Review/Plan, 2. HW Management Performance Report; or 3. Summary Progress Report as an alternative document.

Source Description

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Source Description

Source Description : The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
 The UORS is managed by the California Waste Management Board (CIWMB). The CIWMB helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Violations

Violation Date : 05/09/2019
 Citation : 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12

Description : Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Notes : Returned to compliance on 06/07/2019. OBSERVATION: The generator has not obtained an active EPA ID number to manage hazardous waste. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an active EPA ID number. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that you have obtained an EPA ID number.

Division : Los Angeles County Fire Department
 Program : HW
 Source : CERS

Violation Date : 05/09/2019
 Citation : 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)

Description : Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.

AST - CA (cont.)

Notes :

Returned to compliance on 05/23/2019. OBSERVATION: A hazardous waste tank reassessment has not been conducted for the used oil tank system within 5 years of the previous tank system assessment or within the remaining service life of the tank system as stated in the engineer's report, whichever is less. CORRECTIVE ACTION: Obtain a written hazardous waste tank system reassessment for the used oil tank system in accordance with 22 CCR 15 66265.192 and submit a copy to the CUPA.

Division : Los Angeles County Fire Department
 Program : HW

Violation Date : 05/09/2019

Citation : 22 CCR 15 66265.195(c) - California Code of Regulations, Title 22,
 Chapter 15, Section(s) 66265.195(c)

Description : Failure to conduct and document inspections of hazardous waste tank
 systems each operating day and retain records of those inspections at
 the facility.

Notes : Returned to compliance on 07/03/2019. OBSERVATION: Daily
 inspections of the used oil tank system have not been conducted and
 documented. CORRECTIVE ACTION: Submit documentation to the CUPA
 demonstrating that the used oil tank system is being properly inspected
 and documented.

Source Description

Source Description : RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI). The UORS is managed by the California Waste Management Board (CIWMB). The CIWMB helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Source Description

Source Description : The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
 The UORS is managed by the California Waste Management Board (CIWMB). The CIWMB helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Report Cycle :	2003
Hazardous Waste Page Number :	5
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	WASTE GASOLINE AND WATER
Primary NAICS :	811191 - Automotive Oil Change and Lubrication Shops
Source Code :	G33 - Leak collection and floor sweeping (ongoing, routine)
Form Code :	W211 - Paint thinner or petroleum distillates
Management Method :	H040 - Incineration - thermal destruction other than use as a fuel (includes any preparation prior to burning)
Generation Tons :	0.4375
Managed Tons :	0
Shipped Tons :	0.4375
Received Tons :	0
Receiver ID :	CAD028409019
Receiver State :	CA
Shipper ID :	CAD982509416
Shipper State :	CA
Waste Minimization :	N/R

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

FRS (cont.)

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Status Date : 11/19/1997
 Global ID : T0603702500
 Status : Open - Case Begin Date

Facility Name : PUBLIC WORKS YARD
 Facility Address : 124 LAKE ST S, BURBANK, CA 91502
 County : Los Angeles

Site Details

Status Date : 01/22/2013
 Status : Completed - Case Closed
 Begin Date : 12/06/2007
 Global ID : T0603709486
 Region : REGION 4
 Site History : N/R
 RB Case Number : N/R
 Potential Media Affected : Soil
 Potential Contaminants of Concern : Waste Oil / Motor / Hydraulic / Lubricating
 Local Agency : BURBANK, CITY OF
 Local Case Number : TT
 Lead Agency : SWRCB
 File Location : N/R
 CUF Case : NO
 Caseworker : MC
 Case Type : LUST Cleanup Site
 How Discovered : UST System Modification
 How Discovered Description : N/R
 Stop Method : Other Means
 Stop Description : N/R
 Calwater Watershed Name : Los Angeles River - San Fernando - Bull Canyon (412.21)
 DWR Groundwater Subbasin Name : San Fernando Valley (4-012)
 Disadvantaged Community : N/R
 Latitude : 34.175422
 Longitude : -118.314151

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description : N/R
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :	RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Violations

Violation Date : 08/14/2019

Citation : 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Description : Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Notes : Returned to compliance on 08/14/2019. OBSERVATION: 1x55 gal drum of waste mineral oil and 16x20 gal transformers with waste mineral oil located in the hazardous waste storage area was observed without a hazardous waste label. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled. COS.

Site Details

Date Form Received by Agency :	03/01/2018
EPA ID :	CAD980360796
Mailing Address :	164 W MAGNOLIA BLVD, BURBANK, CA 91503
Contact :	CLAUDIA FIERRO
Contact Address :	164 W MAGNOLIA BLVD, BURBANK, CA 91503
Contact Country :	US
Contact Telephone :	818-238-3510
Contact Email :	CFIERRO@BURBANKCA.GOV
EPA Region :	09
Land Type :	Municipal
Source Type :	Annual/Biennial Report updated with Notification
Classification :	Large Quantity Generator

Description :

Handlers that generate 1,000 kg or more of hazardous waste during any calendar month; or generate more than 1 kg of acutely hazardous waste during any calendar month; or generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1 kg of acutely hazardous waste at any time; or generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.

Last Date in Agency List : 10/19/2020

Waste Activity Monitoring

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your Envirosearch account representative for a complimentary site report containing all of the details available.

Report Cycle :	2017
Hazardous Waste Page Number :	1
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	UN1325, WASTE FLAMMABLE SOLIDS, ORGANIC, N.O.S., (PAPER/RAGS/OIL/LAQUER THINNER), 4.1, PGIII
Primary NAICS :	221112 - Fossil Fuel Electric Power Generation
Source Code :	G09 - Other production or service-related processes from which the waste is a direct outflow or result (specify in comments)
Form Code :	W211 - Paint thinner or petroleum distillates
Management Method :	H141 - The site receiving this waste stored/bulked and transferred the waste with no treatment or recovery (H010-H129), fuel blending (H061), or disposal (H131-H135) at that receiving site.
Generation Tons :	0.025

Vessel 3 (300 Tons) :	No

Description :

A release of sulfuric acid occurred at the Burbank Water & Power facility in Burbank. The release was discovered by on-site personnel during facility inspections. The Operations Division contacted the Burbank Fire Department for assistance. The Burbank Fire Department and the Los Angeles County Hazardous Materials Division are on-scene and attempting to stop the on-going release. The source of the release has been identified as storage tank #233TK005. The tank has a capacity of 10,000-gallons. At the time of the incident, the tank contained 5,000-gallons of sulfuric acid. The release was contained to facility grounds and may have impacted an on-site storm drain that leads to the Burbank Western Channel. Current actions include the deployment of absorbents and diking off areas, to include the storm drain, to prevent further facility ground impacts. Clean Harbors (contractor) is on-scene and in the process of performing a cleanup with the use of a vacuum truck. No off-site areas have been impacted by the release and no evacuations of personnel required. The cause of the release is currently under investigation.

ERNS (cont.)

Sequence Number : 1169598
 Potential Flag : N

Description of Incident :

ON 15JAN2017, SULFURIC ACID (93%) RELEASED FROM A STORAGE TANK. THIS WAS DUE TO THE DETERIORATION OF A FLANGE LINE, WHICH ERODED THE SURFACE AND THE ACID REACHED THE GASKETS. THIS RESULTED IN THE CATASTROPHIC FAILURE OF THE GASKET SEAL. AN ESTIMATED 5,000 GALLONS OF ACID RELEASED INTO THE SECONDARY CONTAINMENT SYSTEM. HOWEVER, CONTAINMENT WAS BREACHED AND 3,800 RELEASED ONTO THE GROUND, ASPHALT AND AROUND THE ZLD UNIT. A MINISCULE AMOUNT IS BELIEVED TO HAVE IMPACTED A STORM DRAIN. THE STORM WATER DISCHARGE RUNS INTO THE BURBANK WESTERN CHANNEL, BUT THERE IS NO KNOWN IMPACT (TESTING UNDERWAY).

Last Date in Agency List : 2017-05-03

Incident Response Summary

Date Time Received : 2017-01-26 19:55:00
 Date Time Completed : 2017-01-26 20:34:00

Source Description :

(E-GGRT, accessible through an EPA web page, is used to submit annual reports in support of the EPA rule for mandatory reporting of greenhouse gases (GHG) by large GHG emissions sources. Implementation of 40 CFR part 98 is referred to as the greenhouse gas reporting program (GHGRP). This comprehensive, nationwide emissions data will provide a better understanding of the sources of GHGs and will guide development of the policies and programs to reduce emissions. The publically available data will allow reporters to track their own emissions, compare them to similar facilities, and aid in identifying cost effective opportunities to reduce emissions in the future. All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

Source Description :

CAMDBS is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed to reduce the transport of ozone. These emissions trading programs allow regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Additional information on the programs is available on the Clean Air Markets site.

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The EGRID contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

The Energy Information Administration (EIA) is an independent agency within U.S. Department of Energy that develops surveys, collects energy data, and analyzes and models energy issues. The EIA-860 database supports the annual electric generator report and contains electric utility and non-utility (including independent power producers, combined heat and power producers, and other industrials) generator-specific plant data, including county and state location and ownership information.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The RMP database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

FRS (cont.)

Source Description :

ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Hazardous Waste Summary

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your EnviroSite account representative for a complimentary site report containing all of the details available.

Waste Code / Name :	134 - Aqueous solution with <10% total organic residues
	181 - Other inorganic solid waste
	221 - Waste oil and mixed oil
	223 - Unspecified oil-containing waste
	261 - Polychlorinated biphenyls and material containing PCB's
	291 - Latex waste
	331 - Off-specification, aged, or surplus organics
	343 - Unspecified organic liquid mixture

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description : The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI). TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Site Details

Status Date : 05/17/2017
 Status : Completed - Case Closed
 Begin Date : 12/20/2011
 Global ID : T10000004738
 Region : REGION 4

Site History :

The site was leased by Tech-Graphics, Inc. for 40 years. The business had vacated the property by January 2003. Manufacturing activities included spray painting, engraving, acid etching, etc. VOCs were stored and used at the site. Areas of concern include two former sub-grade clarifiers, the former acid etch room, and the former chemical storage and handling area. Site assessments indicated that soil and groundwater beneath the site was impacted with VOCs. SVE remediation had been conducted between 2005 and 2008 under the oversight of LAFD-HHMD. The case was transferred to the Regional Board for continued oversight for investigation and remediation.

RB Case Number : 104.5166

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Site Details

Status Date : 09/30/2015
 Status : Completed - Case Closed
 Begin Date : 02/26/2013
 Global ID : T10000004619
 Region : REGION 4

Site History :

The Site had undergone SVE remediation for treatment of PCE and TCE from 1993 to 1996. An NFR for VOCs in soils only was issued by LA-RWQCB. The closure and abandonment of the system was approved by DTSC, the lead agency at the time. Regional Board issued a CWC 13267 Order for a subsurface investigation of chromium and hexavalent chromium. A site assessment was conducted in December 2014, which included one boring advanced to 46 feet bgs in the area near a storm drain inlet where elevated total chromium concentration was reported in a surface sediment sample in 1983. Hexavalent chromium was not detected above laboratory reporting limits in the soil in December 2014. The maximum concentration of total chromium detected was 39.4 mg/kg, well below the USEPA Region 9 RSL of 180,000 mg/kg for industrial/commercial sites.

Waste Activity Monitoring

Report Cycle : 2009
 Hazardous Waste Page Number : 1
 Hazardous Waste Sub-Page Number : 1
 BR Form : GM
 Waste Description : HAZARDOUS WASTE SOLID, NOS, 9, NA3077, PG III (CONCRETE, CHROME)
 Primary NAICS : 332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring
 Source Code : G19 - Other one-time or intermittent processes (specify in comments)

Form Code : W002 - Contaminated debris (see definition at 40 CFR 268.2(g) and requirements at 40 CFR 268.45):for example, certain paper, clothing, rags, wood, empty fiber or plastic containers, glass, piping, or other solids

Management Method : H132 - Landfill or surface impoundment that will be closed as landfill (to include prior treatment and/or stabilization)

Generation Tons : 17.3
 Managed Tons : 0
 Shipped Tons : 17.3
 Received Tons : 0
 Receiver ID : NVT330010000
 Receiver State : NV
 Shipper ID : CAD008306482
 Shipper State : CA
 Waste Minimization : X - No waste minimization efforts were implemented for this waste
 Waste Code List : D007
 Waste Code Group : D007 - CHROMIUM
 Waste Generation Type : N/R

Report Cycle : 2009
 Hazardous Waste Page Number : 2
 Hazardous Waste Sub-Page Number : 1
 BR Form : GM
 Waste Description : HAZARDOUS WASTE SOILD, NOS, 9, NA5077, PGIH (SOIL, CHROME)
 Primary NAICS : 332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring
 Source Code : G19 - Other one-time or intermittent processes (specify in comments)

Form Code : W301 - Contaminated soil (usually from spill clean up, demolition, or remediation); see also W512

Map Id: 83
 Direction: ENE
 Distance: 0.705 mi.

 Regulation Violated :

N

SLIC REG 4 - CA

Facility Name : J & M ANODIZING INC.
 Facility Address : 525 SOUTH FLOWER STREET, BURBANK, CA 91502
 County : Los Angeles

Site Details

Status Date : 02/03/2016
 Status : Open - Inactive
 Begin Date : 03/27/1987
 Global ID : SL603798942
 Region : REGION 4

Site History :

The Site contained an industrial building built in 1956 used for anodizing processes and chemical storage. Chromium waste and other chemicals were released to the subsurface. Environmental assessment and cleanup activities have been conducted at the Site since 2007. The Regional Board has determined that the total chromium contamination in the top 14 feet of soil has been removed. The remaining hexavalent chromium in deeper soils and in the underlying groundwater have not been addressed due to financial hardship of the Irma King Trust (responsible party). The Regional Board will continue to oversee the remaining investigation and cleanup efforts to address chromium contamination in the deeper soils at the Site. A land use covenant and environmental restriction (deed restriction) has been recorded with the County.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Waste Activity Monitoring

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your EnviroSite account representative for a complimentary site report containing all of the details available.

Report Cycle :	2005
Hazardous Waste Page Number :	1
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	CADMIUM CONTAINING SPENT RINSE WATER FROM A PLATING PROCESS
Primary NAICS :	332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring
Source Code :	G08 - Removal of spent process liquids or catalysts (bulk removal of wastes from chemical manufacturing or processing, etc.)
Form Code :	W107 - Aqueous waste containing cyanides (generally caustic)
Management Method :	H073 - Cyanide destruction with or without precipitation (includes any preparation or final processes for consolidation of residuals)
Generation Tons :	20.8507089
Managed Tons :	0
Shipped Tons :	20.8507089
Received Tons :	0
Receiver ID :	CAD097030993
Receiver State :	CA
Shipper ID :	CAD008297996
Shipper State :	CA
Waste Minimization :	N/R
Waste Code List :	D006
Waste Code Group :	D006 - CADMIUM
Waste Generation Type :	N/R

Report Cycle :	2005
Hazardous Waste Page Number :	2
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	REACTIVE SPENT CONCENTRATED CYANIDE SOLUTIONS
Primary NAICS :	332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring

Map Id: L85
 Direction: ESE
 Distance: 0.764 mi.
 Actual: 4031.495 ft.
 Elevation: 0.096 mi. / 504.672 ft.
 Relative: Lower

Source Description

Source Description : All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

Source Description : HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Source Description : RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Superfund Enterprise Management System (SEMS) integrates multiple legacy systems into a comprehensive tracking and reporting tool, providing data on the inventory of active and archived hazardous waste sites evaluated by the Superfund program. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description :

ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Waste Activity Monitoring

Report Cycle : 2005
 Hazardous Waste Page Number : 1
 Hazardous Waste Sub-Page Number : 1
 BR Form : GM
 Waste Description : WASTE CORROSIVE -- SULFURIC ACID & PAINT
 Primary NAICS : 332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring

Source Code : G03 - Plating and phosphating (electro- or non-electroplating or phosphating)

Form Code : N/R

Management Method : H111 - Stabilization or chemical fixation prior to disposal at another site (as the major component of treatment; not H071-H075, H077, or H082)

Generation Tons : 32.75
 Managed Tons : 0
 Shipped Tons : 32.75
 Received Tons : 0
 Receiver ID : NVT330010000
 Receiver State : NV
 Shipper ID : CAD008308520
 Shipper State : CA
 Waste Minimization : N/R
 Waste Code List : D002
 Waste Code Group : D002 - CORROSIVE WASTE
 Waste Generation Type : N/R

Report Cycle : 2003
 Hazardous Waste Page Number : 1
 Hazardous Waste Sub-Page Number : 1
 BR Form : GM
 Waste Description : HYDROXIDE FILTER CAKE
 Primary NAICS : 332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring

Source Code : G03 - Plating and phosphating (electro- or non-electroplating or phosphating)

Form Code : W501 - Lime and/or metal hydroxide sludges and solids with no cyanides (not contaminated muds - W512)

Management Method : H010 - Metals recovery including retorting, smelting, chemical, etc.
 Generation Tons : 129
 Managed Tons : 0

Waste Code Group : F006 - WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING
OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC
ACID ANODIZING OF ALUMINUM; (2) TIN PLA

Waste Generation Type : N/R

Report Cycle : 2001
Hazardous Waste Page Number : 2
Hazardous Waste Sub-Page Number : 1
BR Form : GM
Waste Description : SPENT NITRIC ACID FROM ELECTROPLATING OPERATIONS
Primary NAICS : 332813 - Electroplating, Plating, Polishing, Anodizing, and Coloring

Source Code : G03 - Plating and phosphating (electro- or non-electroplating or
phosphating)

Form Code : W103 - Spent concentrated acid (5% or more)
Management Method : N/R
Generation Tons : 11.0625
Managed Tons : 0
Shipped Tons : 11.0625
Received Tons : 0
Receiver ID : CAT080033681
Receiver State : CA
Shipper ID : CAD008308520
Shipper State : CA
Waste Minimization : N/R
Waste Code List : D002
Waste Code Group : D002 - CORROSIVE WASTE
Waste Generation Type : N/R

Report Cycle : 2001

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description :

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

Source Description**Source Description :**

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Waste Generator Summary

Generator EPA ID : CAP000200010
 Generator County : Los Angeles
 TSDf EPA ID : CAT080013352
 TSDf Disposal County : Los Angeles
 State Waste : Aqueous solution with total organic residues less than 10 percent

Disposal Method : OTHER RECOVERY OF RECLAMATION FOR REUSE INCLUDING ACID
 REGENERATION, ORGANICS RECOVERY ECT

Tons : 2.268
 Tanner Year : 2009

Generator EPA ID : CAP000200010
 Generator County : Los Angeles
 TSDf EPA ID : NVT330010000
 TSDf Disposal County : Unknown
 State Waste : Contaminated soil from site clean-up

Disposal Method : LANDFILL OR SURFACE IMPOUNDMENT THAT WILL BE CLOSED AS
 LANDFILL(TO INCLUDE ON-SITE TREATMENT AND/OR STABILIZATION)

Tons : 1.1875
 Tanner Year : 2009

Source Description

Source Description : ACRES stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions.
 DTSC EnviroStor is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

FEDERAL RCRA NON-CORRACTS TSD FACILITIES LIST

ARCHIVED RCRA TSD: Resource Conservation and Recovery Act hazardous waste transportation storage disposal and treatment facilities

Agency Version Date: 10/12/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 04/13/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 01/15/2021

RCRA_TSD: Resource Conservation and Recovery Act hazardous waste transportation storage disposal and treatment facilities

Agency Version Date: 10/12/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 04/13/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 01/15/2021

FEDERAL CERCLIS LIST

CERCLIS NFRAP: The CERCLIS sites with No Further Remedial Action Planned from the CERCLIS program database. The Environmental Protection Agency decommissioned the CERCLIS data in 2014. The last update was November 12, 2013.

Agency Version Date: 10/25/2013
Agency Update Frequency: Quarterly
Planned Next Contact: 05/11/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 02/12/2021

CERCLIS-HIST: The CERCLIS program database contains information on the assessment and remediation of federal hazardous waste sites. The Environmental Protection Agency decommissioned the CERCLIS data in 2014. The last update was November 12, 2013.

Agency Version Date: 10/29/2013
Agency Update Frequency: Quarterly
Planned Next Contact: 05/11/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 02/12/2021

FEDERAL FACILITY: Sites where Federal Facilities Restoration and Reuse Office (FFRRO) arranged cleanup for Base Closure and Property Transfer at Federal Facilities

Agency Version Date: 11/17/2020
Agency Update Frequency: Varies
Planned Next Contact: 05/11/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8712
Most Recent Contact: 02/12/2021

SEMS_8R_ACTIVE SITES: The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. NPL sites include latitude and longitude information. For non-NPL sites, a brief site status is provided.

Agency Version Date: 11/17/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 05/11/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 02/12/2021

SEMS_8R_ARCHIVED SITES: The Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Agency Version Date: 10/28/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 05/11/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 02/12/2021

FEDERAL RCRA CORRACTS FACILITIES LIST

CORRACTS: List of facilities where Resource Conservation and Recovery Act Corrective Action Program used to investigate and remediate hazardous releases

Agency Version Date: 10/12/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 04/13/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 202-566-1667
Most Recent Contact: 01/15/2021

HIST CORRACTS 2: List of facilities where Resource Conservation and Recovery Act Corrective Action Program used to investigate and remediate hazardous releases that are no longer in current agency list.

Agency Version Date: 10/12/2018
Agency Update Frequency: Annually
Planned Next Contact: 03/12/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 202-566-1667
Most Recent Contact: 12/15/2020

FEDERAL DELISTED NPL SITE LIST

DELISTED NPL: National Priority List of sites that were delisted and no longer require action

Agency Version Date: 11/17/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 05/11/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 02/12/2021

DELISTED PROPOSED NPL: Sites that have been delisted from the proposed National Priority List

Agency Version Date: 11/17/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 05/11/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 02/12/2021

SEMS_DELETED NPL: All Deleted National Priority List Sties

Agency Version Date: 10/28/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 05/11/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 02/12/2021

FEDERAL LANDFILL AND/OR SOLID WASTE DISPOSAL SITE LISTS

EPA LF MOP: Sites in the EPA Landfill Methane Outreach Program

Agency Version Date: 01/11/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 04/09/2021

Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 01/11/2021

FEDERAL ERNS LIST

ERNS: Emergency Response Notification System records of reported spills

Agency Version Date: 02/04/2021
Agency Update Frequency: Annually
Planned Next Contact: 05/03/2021

Agency: National Response Center United States Coast Guard
Agency Contact: N/R
Most Recent Contact: 02/04/2021

FEDERAL INSTITUTIONAL CONTROLS / ENGINEERING CONTROLS REGISTRIES

FED E C: Federal listing of remediation sites with engineering controls

Agency Version Date: 12/18/2020
Agency Update Frequency: Varies
Planned Next Contact: 03/11/2021

Environmental Protection Agency

(800) 426-4791

Safe drinking water information Systems with enforcement violations

WELLS - GAMA - CA

California Groundwater Ambient Monitoring Assessment

State Water Resources Control Board

916-341-5791

Brings together datasets from California state agencies including: Public Health Water Resources and Pesticide Regulation as well as from the US Geological Survey Lawrence Livermore National Laboratory and the Water Boards. It shows results for untreated raw water in different types of wells for naturally-occurring and man-made chemicals.

FLOOD Q3

Flood data

Environmental Protection Agency

(202) 566-1667

Q3 Flood Data

HYDROLOGIC UNIT

Hydrologic Unit Maps

USGS

The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI

National Wetland Inventory
U.S. Fish and Wildlife Service
(703) 358-2171
Wetland Inventory for the United States

SSURGO

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.

600 XXXX = Correct address only. No other information.

X Streetname = intersecting cross street

Client Project

51869

Date Created

03/09/2021

Historical
Information
Gatherers

This Research Summary identifies the products and services provided by Historical Information Gatherers, Inc. (HIG) for the above referenced site location. All products are provided as PDFs unless otherwise noted.

City Directory Pages/Abstracts

Research Methodology: A search was conducted for city directories that include coverage of the site area using HIG's City Directory Collection and other sources, if needed. Directories for the following years were identified for the site area. A comma between date ranges indicates a gap of 10 years or more in available city directories:

Burbank, CA; 1936-1952, 1969

Los Angeles North, CA; 1971-1986

East San Fernando Valley, CA; 1990/91-2018

The above listed directories were reviewed at approximate 5 year intervals to determine if the street(s) specified in the order were included in the directories and had listings for the site area. HIG attempted to identify former street names and aliases and if identified, these were also included in the review.

Research Results: City directory information, when provided, was used to create a multi-page file(s) named CD- followed by the street name. When City Directory Pages are provided, the publication name and date are shown at the top of each page. When a City Directory abstract is provided, the first page of the abstract includes the relevant publication information. The years of coverage identified for each street and any identified historical street names are as follows:

Olive Avenue W (1942-52, 1969-2018) / Olive Avenue S (1936)

FIM+ Maps

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIMs), real estate atlases and similar maps for the site location and adjoining properties. These maps were used to create a multi-page file named FIM+Maps. The maps have title blocks that include the map publisher, year the map was created and, if applicable, the year the map was last updated. The years provided are:

1953, 1954, 1955, 1960, 1968

Disclaimer & Limitation of Liability

This Research Summary and the related documents and images provided by Historical Information Gatherers (hereafter referred to as the "Site Specific HIG Data") contain information obtained from a variety of public and private sources. Additional information for the site and surrounding properties may exist. The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced

APPENDIX D
QUALIFICATIONS

JAMES YOON
Senior Project Manager
Registered Environmental Property Assessor No. 128283
(National Environmental Property Assessor)

Masters Degree

Cal State University, Long Beach
Environmental Engineering

Bachelor of Science

Cal State University, Long Beach
Chemistry

RESPONSIBILITIES:

- Wastewater Specialist/Treatment
- Soil/Groundwater Remediation
- Hazardous Waste Handling
- Air Pollution Control
- PHASE-I, II & III Environmental Site Assessment
- Site Remediation technology
- Environmental Cleaning/Compliance Issues
- Soil and Groundwater Sampling and Analysis

EXPERIENCE:

- Pre-Transaction Screen Real Estate Assessment for Environmental Issues
- Phase I, II & III Environmental Site Audit investigations, including site reconnaissance, interviews, governmental record search, and report writing.
- Project estimations for tank removal, site assessment and site remediation
- Project managing for tank removal and installation
- Hazardous Waste Profiling and Removal
- Soil and Groundwater Remediation
- Defining soil/groundwater contamination size and extent
- Hydrogeologic study and plume migration
- Wastewater and drinking water treatment process designs
- Soil Sampling/Groundwater Monitoring Systems installation
- Safety and Health Training

HAN-SOL YOO
Project Engineer and Coordinator

EDUCATION:

California State University, Long Beach, B.S. Civil Engineering

RESPONSIBILITIES:

- Phase I, II & III Environmental Site Assessments
- Sales and Marketing for Environmental Assessments, Tank Removals and Site Remediation
- Phase I, II & III Site Investigator and Project Coordinator
- Government Regulations and Compliance

EXPERIENCE:

- Pre-Transaction Screen Real Estate Assessment for Environmental Issues
- Phase I, II & III Environmental Site Audit investigations, including site reconnaissance, interviews, governmental record search, and report writing.
- Soil drilling and Sampling Assistant
- Sales and Marketing for Phase I and Phase II Assessment work Coordination of Asbestos and Lead Inspection and Survey
